DATA VALIDATION REPORT

HGL – SWAN ISLAND BASIN

Prepared for:

HydroGeoLogic, Inc
11107 Sunset Hills Rd. Suite 400
Reston, VA 20190

Prepared by:

EcoChem, Inc.
500 Union Street, Suite 1010
Seattle, WA 98101

EcoChem Project: C28601-1

SDG: 20069

May 25, 2023

Approved for Release:

A handwritten signature in black ink, appearing to read "Michela Hernandez". The signature is written in a cursive style and is positioned above a horizontal line.

Michela Hernandez
Senior Project Chemist
EcoChem, Inc.

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of compliance review (EPA Stage 2A) performed on Dredge Elutriate Test (DRET) samples and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
PCB Congeners	E1668	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, April 2020).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

PCB Congeners by EPA 1668C

This report documents the review of analytical data from the analyses of Dredge Elutriate Test (DRET) samples and the associated laboratory quality control (QC) samples. All data received a compliance screening level of review (EPA Stage 2A). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the Sample Index for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
20360	6 Elutriate	Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

Several results reported in the PDF are coelutions of two or more PCB congeners. In the EDD, these coelutions should be reported in the "custom field 1" field. For this SDG, only one of the coeluting PCB congeners is listed in this field. For example, PCB-12/13 from the PDF was reported as 3,4-dichlorobiphenyl (12) in the EDD. No changes were made to the EDD.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

✓	Sample Receipt, Preservation, and Holding Times	1	Certified Reference Material
2	Laboratory Blanks	1	Field Duplicates
1	Field Blanks	✓	Target Analyte List
✓	Labeled Compound Recovery	1	Reporting Limits
1	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	2	Compound Identification
✓	Laboratory Control Samples (LCS/LCSD)	✓	Compound Quantitation

✓ *Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.*

¹ *Quality control results are discussed below, but no data were qualified.*

² *Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.*

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned EMPC-flags to values when a peak was detected but did not meet identification criteria. These values are considered as positive identifications which are "estimated maximum possible concentrations". When these occurred in the method blank, the results were evaluated. When these occurred in the associated samples, EMPC values that were less than the action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. Various target analytes were detected in the method blanks, however only the following analytes required qualification in one or more samples:

The following field sample results were qualified as not detected:

Client ID	Analyte	Qualifier
SIB-SED-C22-09052022 DRET 1 g/L	PCB-2	U-MBL
	PCB-3	U-MBL
	PCB-11	U-MBL
SIB-SED-C22-09052022 DRET 10 g/L	PCB-1	U-MBL
	PCB-3	U-MBL
	PCB-11	U-MBL
SIB-SED-D05-09052022 DRET 1 g/L	PCB-1	U-MBL
	PCB-2	U-MBL
	PCB-3	U-MBL
	PCB-4	U-MBL
	PCB-6	U-MBL
	PCB-11	U-MBL
	PCB-16	U-MBL
	PCB-18/30	U-MBL
	PCB-19	U-MBL
	PCB-22	U-MBL
PCB-32	U-MBL	
SIB-SED-D05-09052022 DRET 10 g/L	PCB-2	U-MBL
	PCB-3	U-MBL
	PCB-11	U-MBL
SIB-SED-F14-09052022 DRET 1 g/L	PCB-2	U-MBL
	PCB-6	U-MBL
	PCB-11	U-MBL
	PCB-16	U-MBL
	PCB-22	U-MBL

Field Blanks

No samples identified as field blanks were submitted.

Matrix Spike / Matrix Spike Duplicates

No matrix spike/matrix spike duplicate samples were analyzed. Accuracy and precision were evaluated using the LCS/LCSD samples.

Certified Reference Material

No certified reference materials were analyzed.

Field Duplicates

No field duplicates were submitted with this data set.

Reporting Limits

The laboratory practical quantitation limits (PQL) were greater than those provided in the QAPP. Although some individual congeners were reported as not detected at elevated detection limits, this did not impact data usability, as the overall total PCB concentrations for all samples were greater than the site CUL.

For Sample SIB-SED-F14-09052022 DRET 10 g/L, a smaller sample aliquot was extracted due to high concentration of target analytes. Reporting limits were adjusted accordingly.

Compound Identification

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were estimated (J-VJ).

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. Accuracy was acceptable as demonstrated by the labeled compound and LCS/LCSD recoveries. Precision was also acceptable as demonstrated by the LCS/LCSD relative percent difference (RPD) values.

Data were qualified as not detected due to method blank contamination. Data were estimated to indicate that EMPC values are estimated maximum possible concentrations.

All data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r ² below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

QC Element	Reason Code	Definition
Low-Level Calibration Check	LLCH	Low-level calibration check above the upper limit
Low-Level Calibration Check	LLCL	Low-level calibration check below the lower limit
Low-Level Calibration Check	LLXL	Low-level calibration check below the lower limit, extreme discrepancy
Method Blank	MBH	Method blank result \geq LOQ
Method Blank	MBHB	Result is judged to be biased high based on associated method blank result
Method Blank	MBL	Method blank result $<$ LOQ
Matrix Spike	MSH	MS and/or MSD %R above acceptance criterion
Matrix Spike	MSL	MS and/or MSD %R below acceptance criterion
Matrix Spike	MSLX	MS and/or MSD %R below acceptance criterion, extreme discrepancy
Matrix Spike	MSP	MS/MSD RPD above acceptance criterion
Post-Digestion Spike	PDH	Post-digestion spike recovery high
Post-Digestion Spike	PDL	Post-digestion spike recovery low
Post-Digestion Spike	PDLX	Post-digestion spike recovery low, extreme discrepancy
Post-Digestion Spike	PDN	Post-digestion spike not performed or not applicable and serial dilution result not performed or not applicable
Sample Delivery and Condition	BUB	Bubbles $>$ 5 millimeters in volatile organic compounds vial
Sample Delivery and Condition	DAM	Sample container damaged
Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor

Senior Project Chemist
EcoChem, Inc.

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of full review (EPA Stage 4) performed on DRET elutriate and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Dioxins/Furans	E1613B	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, November 2020).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

Dioxin/Furan Compounds by EPA 1613B

This report documents the review of analytical data from the analyses of DRET elutriate samples and the associated laboratory quality control (QC) samples. All data received a full validation (EPA Stage 4). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES AND MATRIX	VALIDATION LEVEL
20361	6 DRET Elutriate	Stage 4

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table.

2	Sample Receipt, Preservation, and Holding Times	✓	Laboratory Control Samples (LCS/LCSD)
✓	System Performance and Resolution Checks	1	Certified Reference Material
✓	Initial Calibration (ICAL)	1	Field Duplicates
✓	Calibration Verification (CCAL)	✓	Target Analyte List
2	Laboratory Blanks	1	Reporting Limits
1	Field Blanks	2	Compound Identification
✓	Labeled Compound Recovery	✓	Compound Quantitation
1	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	1	Calculation Verification

✓ Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

The elutriate samples were prepared by EcoAnalysts, Port Gamble, Washington within the required holding time and shipped to Cape Fear Analytical. All elutriates were extracted past the 30-day holding time at 56 days; all results were estimated (J/UJ-HTP).

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned K-flags to values when a peak was detected but did not meet identification criteria. These values are considered positive identifications which are "estimated maximum possible concentrations" or EMPC. When these occurred in the method blank the results were evaluated as positive results. When these occurred in the associated samples, any EMPC values that were less than the method blank action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. Various target analytes were detected in the method blanks, however only the following analytes required qualification in one or more samples:

The following field sample results were qualified as not detected:

CLIENT ID	ANALYTE	QUALIFIER
SIB-SED-C22-09052022 DRET 1 G/L	1,2,3,6,7,8-HxCDF	U-MBL
SIB-SED-C22-09052022 DRET 10 G/L	1,2,3,6,7,8-HxCDF	U-MBL
	1,2,3,7,8-PeCDD	U-MBL
SIB-SED-D05-09052022 DRET 1 G/L	1,2,3,4,6,7,8-HpCDF	U-MBL
SIB-SED-D05-09052022 DRET 10 G/L	1,2,3,6,7,8-HxCDF	U-MBL
SIB-SED-F14-09052022 DRET 1 G/L	1,2,3,4,6,7,8-HpCDF	U-MBL
	1,2,3,6,7,8-HxCDF	U-MBL

Field Blanks

No field blank samples were submitted with this SDG.

Matrix Spike/Matrix Spike Duplicate

No matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed. Accuracy was evaluated using the labeled compound and laboratory control sample recoveries and precision was evaluated using the laboratory control/laboratory control duplicate (LCS/LCSD) samples.

Certified Reference Material

No certified reference materials were analyzed.

Field Duplicates

No field duplicates were submitted.

Reporting Limits

Reporting limits were elevated for one or more samples due to sample volumes.

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF positive results when using the DB5 GC column for analysis. The DB5 column cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. Although the laboratory used a DB-5MS column which more adequately separates TCDF isomers, the laboratory still performed a second column confirmation on a DB-225 column when 2,3,7,8-TCDF was detected, and the concentration was greater than the reporting limit. No 2,3,7,8-TCDF was detected in these samples; confirmation was not required.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. These results were K-flagged by the laboratory. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were qualified (J-VJ).

Calculation Verification

Calculation verifications were performed for this sample delivery group (SDG). No calculation or transcription errors were found.

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. Accuracy was acceptable, as demonstrated by the labeled compound and LCS/LCSD recoveries. Precision was also acceptable as indicated by the LCS/LCSD RPD values.

Data were qualified as not detected due to method blank contamination. Data were estimated to indicate that EMPC values are estimated maximum possible concentrations. Data were also estimated due to holding time outliers.

All data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r^2 below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

QC Element	Reason Code	Definition
Low-Level Calibration Check	LLCH	Low-level calibration check above the upper limit
Low-Level Calibration Check	LLCL	Low-level calibration check below the lower limit
Low-Level Calibration Check	LLXL	Low-level calibration check below the lower limit, extreme discrepancy
Method Blank	MBH	Method blank result \geq LOQ
Method Blank	MBHB	Result is judged to be biased high based on associated method blank result
Method Blank	MBL	Method blank result $<$ LOQ
Matrix Spike	MSH	MS and/or MSD %R above acceptance criterion
Matrix Spike	MSL	MS and/or MSD %R below acceptance criterion
Matrix Spike	MSLX	MS and/or MSD %R below acceptance criterion, extreme discrepancy
Matrix Spike	MSP	MS/MSD RPD above acceptance criterion
Post-Digestion Spike	PDH	Post-digestion spike recovery high
Post-Digestion Spike	PDL	Post-digestion spike recovery low
Post-Digestion Spike	PDLX	Post-digestion spike recovery low, extreme discrepancy
Post-Digestion Spike	PDN	Post-digestion spike not performed or not applicable and serial dilution result not performed or not applicable
Sample Delivery and Condition	BUB	Bubbles $>$ 5 millimeters in volatile organic compounds vial
Sample Delivery and Condition	DAM	Sample container damaged
Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor

DATA VALIDATION REPORT

HGL – SWAN ISLAND BASIN

Prepared for:

HydroGeoLogic, Inc
11107 Sunset Hills Rd. Suite 400
Reston, VA 20190

Prepared by:

EcoChem, Inc.
500 Union Street, Suite 1010
Seattle, WA 98101

EcoChem Project: C28601-1

SDG: 20417

February 17, 2023

Approved for Release:

A handwritten signature in black ink, appearing to read "Michela Hernandez". The signature is written in a cursive style and is positioned above a horizontal line.

Michela Hernandez
Senior Project Chemist
EcoChem, Inc.

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of compliance review (EPA Stage 2A) performed on sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Dioxins/Furans	E1613B	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, November 2020).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

Dioxin/Furan Compounds by EPA 1613B

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory and field quality control (QC) samples. All data received a compliance screening level of review (EPA Stage 2A). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES AND MATRIX	VALIDATION LEVEL
20417	20 Sediment	Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	1	Certified Reference Material
2	Laboratory Blanks	1	Field Duplicates
1	Field Blanks	✓	Target Analyte List
✓	Labeled Compound Recovery	✓	Reporting Limits
2	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	2	Compound Identification
✓	Laboratory Control Samples (LCS/LCSD)	2	Compound Quantitation

✓ Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

Sample identification (ID) date suffixes were missing the "/" in the EDD as noted on the chains-of-custody (COC).

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned K-flags to values when a peak was detected but did not meet identification criteria. These values are considered positive identifications which are "estimated maximum possible concentrations" or EMPC. When these occurred in the method blank the results were evaluated as positive results. When these occurred in the associated samples, any EMPC values that were less than the method blank action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. Various target analytes were detected in the method blanks, however only the following analytes required qualification in one or more samples:

The following field sample results were qualified as not detected:

CLIENT ID	ANALYTE	QUALIFIER

Field Blanks

No field blank samples were submitted with this SDG.

Matrix Spike/Matrix Spike Duplicate

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. Precision is evaluated using the relative percent difference (RPD) values calculated between the MS and MSD results. When the MS/MSD %R values indicate a potential low bias, associated results are estimated (J/UJ-MSL). Only the associated positive results are estimated (J-MSH) if the %R values indicate a potential high bias. Associated positive results are estimated (J-MSP) if the RPD values indicate uncertainty. No qualifiers are assigned for %R value outliers if the parent concentration is greater than 4x the spike concentration. Qualifiers are only issued to the parent sample.

MS/MSD analyses were performed using Sample SIB-SC-I06-1-2-07/26/2022. The following qualifiers were assigned:

ANALYTE	MS %R	MSD %R	RPD	QUALIFIER
1,2,3,4,6,7,8-HpCDF	OK	237	48.7	J-MSH,MSP
OCDF	OK	592	73.2	J-MSH,MSP
1,2,3,4,6,7,8-HpCDD	Parent > 4x Spike		77.0	J-MSP
OCDD	Parent > 4x Spike		78.4	J-MSP

Certified Reference Material

No certified reference materials were analyzed.

Field Duplicates

No field duplicates were submitted.

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF positive results when using the DB5 GC column for analysis. The DB5 column cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. Although the laboratory used a DB-5MS column which more adequately separates TCDF isomers, the laboratory still performed a second column confirmation on a DB-225 column when 2,3,7,8-TCDF was detected, and the concentration was greater than the reporting limit. Both sets of results were reported. The 2,3,7,8-TCDF results from the DB-5MS column were qualified do-not-report (DNR-EXC) in favor of the results from the DB-225 column.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. These results were K-flagged by the laboratory. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were qualified (J-VJ).

Compound Quantitation

The laboratory flagged sample results with an "E" flag indicating the sample results exceeded the calibrated linear range of the instrument. These results were estimated (J-ACR).

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. With the exceptions noted above, accuracy was acceptable, as demonstrated by the labeled compound, LCS/LCSD, and MS/MSD recoveries. With the exceptions noted above, precision was also acceptable as indicated by the LCS/LCSD, MS/MSD and field duplicate samples.

Data were qualified as not detected due to method blank contamination. Data were estimated to indicate that EMPC values are estimated maximum possible concentrations. Data were also estimated due to calibration range exceedances and MS/MSD precision outliers.

Data were flagged as do-not-report (DNR) to indicate which result (from multiple reported analyses) should not be used. Data that have been flagged DNR should not be used for any purpose.

All other data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r ² below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

QC Element	Reason Code	Definition
Low-Level Calibration Check	LLCH	Low-level calibration check above the upper limit
Low-Level Calibration Check	LLCL	Low-level calibration check below the lower limit
Low-Level Calibration Check	LLXL	Low-level calibration check below the lower limit, extreme discrepancy
Method Blank	MBH	Method blank result \geq LOQ
Method Blank	MBHB	Result is judged to be biased high based on associated method blank result
Method Blank	MBL	Method blank result $<$ LOQ
Matrix Spike	MSH	MS and/or MSD %R above acceptance criterion
Matrix Spike	MSL	MS and/or MSD %R below acceptance criterion
Matrix Spike	MSLX	MS and/or MSD %R below acceptance criterion, extreme discrepancy
Matrix Spike	MSP	MS/MSD RPD above acceptance criterion
Post-Digestion Spike	PDH	Post-digestion spike recovery high
Post-Digestion Spike	PDL	Post-digestion spike recovery low
Post-Digestion Spike	PDLX	Post-digestion spike recovery low, extreme discrepancy
Post-Digestion Spike	PDN	Post-digestion spike not performed or not applicable and serial dilution result not performed or not applicable
Sample Delivery and Condition	BUB	Bubbles $>$ 5 millimeters in volatile organic compounds vial
Sample Delivery and Condition	DAM	Sample container damaged
Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of compliance review (EPA Stage 2A) performed on soil, sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Dioxins/Furans	E1613B	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, November 2022).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

Dioxin/Furan Compounds by EPA 1613B

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory and field quality control (QC) samples. All data received a compliance screening level of review (EPA Stage 2A). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES AND MATRIX	VALIDATION LEVEL
20418	16 Sediment	Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	1	Certified Reference Material
2	Laboratory Blanks	1	Field Duplicates
1	Field Blanks	✓	Target Analyte List
✓	Labeled Compound Recovery	✓	Reporting Limits
2	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	2	Compound Identification
✓	Laboratory Control Samples (LCS/LCSD)	2	Compound Quantitation

✓ Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

Sample identification (ID) date suffixes were missing the "/" in the EDD as noted on the chains-of-custody (COC).

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned K-flags to values when a peak was detected but did not meet identification criteria. These values are considered positive identifications which are "estimated maximum possible concentrations" or EMPC. When these occurred in the method blank the results were evaluated as positive results. When these occurred in the associated samples, any EMPC values that were less than the method blank action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. Various target analytes were detected in the method blanks, however only the following analytes required qualification in one or more samples:

The following field sample results were qualified as not detected:

CLIENT ID	ANALYTE	QUALIFIER
FD-21-07/27/2022	1,2,3,4,7,8-HxCDF	U-MBL
	1,2,3,6,7,8-HxCDF	U-MBL

	2,3,4,7,8-PeCDF	U-MBL

Field Blanks

No field blank samples were submitted with this SDG.

Matrix Spike/Matrix Spike Duplicate

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. Precision is evaluated using the relative percent difference (RPD) values calculated between the MS and MSD results. When the MS/MSD %R values indicate a potential low bias, associated results are estimated (J/UJ-MSL). Only the associated positive results are estimated (J-MSH) if the %R values indicate a potential high bias. Associated positive results are estimated (J-MSP) if the RPD values indicate uncertainty. No qualifiers are assigned for %R value outliers if the parent concentration is greater than 4x the spike concentration. Qualifiers are only issued to the parent sample.

The MS/MSD analyses were performed using Sample SIB-SC-L03-3-4-07/27/2022. The following qualifiers were assigned:

ANALYTE	MS %R	MSD %R	RPD	QUALIFIER
2,3,7,8-TCDF	53	OK	22	J-MSL,MSP
1,2,3,4,6,7,8-HpCDF	38	OK	29	J-MSL,MSP
OCDF	8	OK	38	J-MSLX,MSP
1,2,3,4,6,7,8-HpCDD	Parent conc > 4x spike		56	J-MSP
OCDD	Parent conc > 4x spike		70	J-MSP

Certified Reference Material

No certified reference materials were analyzed.

Field Duplicates

For sediment samples, the RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL.

One set of field replicates, SIB-SC-L03-2-3-07/27/2022 & FD-21-07/27/2022, was submitted. Field precision was acceptable.

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF positive results when using the DB5 GC column for analysis. The DB5 column cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. Although the laboratory used a DB-5MS column which more adequately separates TCDF isomers, the laboratory still performed a second column confirmation on a DB-225 column when 2,3,7,8-TCDF was detected, and the concentration was greater than the reporting limit. Both sets of results were reported. The 2,3,7,8-TCDF results from the DB-5MS column were qualified do-not-report (DNR-EXC) in favor of the results from the DB-225 column.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. These results were K-flagged by the laboratory. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were qualified (J-VJ).

Compound Quantitation

The laboratory flagged sample results with an "E" flag indicating the sample results exceeded the calibrated linear range of the instrument. These results were estimated (J-ACR).

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. With the exceptions noted above, accuracy was acceptable, as demonstrated by the labeled compound, LCS/LCSD, and MS/MSD recoveries. With the exceptions noted above, precision was also acceptable as indicated by the LCS/LCSD, MS/MSD and field duplicate samples.

Data were qualified as not detected due to method blank contamination. Data were estimated to indicate that EMPC values are estimated maximum possible concentrations. Data were also estimated due to calibration range exceedances and MS/MSD precision outliers.

Data were flagged as do-not-report (DNR) to indicate which result (from multiple reported analyses) should not be used. Data that have been flagged DNR should not be used for any purpose.

All other data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r ² below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

Matrix Spike	MSH	MS and/or MSD %R above acceptance criterion
Matrix Spike	MSL	MS and/or MSD %R below acceptance criterion
Matrix Spike	MSLX	MS and/or MSD %R below acceptance criterion, extreme discrepancy
Matrix Spike	MSP	MS/MSD RPD above acceptance criterion
Post-Digestion Spike	PDH	Post-digestion spike recovery high
Post-Digestion Spike	PDL	Post-digestion spike recovery low
Post-Digestion Spike	PDLX	Post-digestion spike recovery low, extreme discrepancy
Post-Digestion Spike	PDN	Post-digestion spike not performed or not applicable and serial dilution result not performed or not applicable
Sample Delivery and Condition	BUB	Bubbles $>$ 5 millimeters in volatile organic compounds vial
Sample Delivery and Condition	DAM	Sample container damaged
Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor

DATA VALIDATION REPORT

HGL – SWAN ISLAND BASIN

Prepared for:

HydroGeoLogic, Inc
11107 Sunset Hills Rd. Suite 400
Reston, VA 20190

Prepared by:

EcoChem, Inc.
500 Union Street, Suite 1010
Seattle, WA 98101

EcoChem Project: C28601-1

SDG: 20419

Revised May 12, 2023

Approved for Release:

A handwritten signature in black ink, appearing to read "Michela Hernandez". The signature is written in a cursive style and is positioned above a horizontal line.

Michela Hernandez
Senior Project Chemist
EcoChem, Inc.

PROJECT NARRATIVE

Basis for the Data Validation

This report was revised to update field duplicate section of the data validation report.

This report summarizes the results of compliance review (EPA Stage 2A) performed on sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Dioxins/Furans	E1613B	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, November 2020).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

Dioxin/Furan Compounds by EPA 1613B

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory and field quality control (QC) samples. All data received a compliance screening level of review (EPA Stage 2A). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES AND MATRIX	VALIDATION LEVEL
20419	20 Sediment	Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

For 5 samples, the date suffix in the sample ID is expressed as DDMMYYYY instead of DD/MM/YYYY in the "sample_name" field. For 14 samples, the "sample_name" field is not populated. All sample IDs in the "sys_sample_code" field match the chain-of-custody.

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table.

✓	Sample Receipt, Preservation, and Holding Times	1	Certified Reference Material
1	Laboratory Blanks	2	Field Duplicates
1	Field Blanks	✓	Target Analyte List
✓	Labeled Compound Recovery	✓	Reporting Limits
2	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	2	Compound Identification
✓	Laboratory Control Samples (LCS/LCSD)	2	Compound Quantitation

✓ Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported

in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned K-flags to values when a peak was detected but did not meet identification criteria. These values are considered positive identifications which are “estimated maximum possible concentrations” or EMPC. When these occurred in the method blank the results were evaluated as positive results. When these occurred in the associated samples, any EMPC values that were less than the method blank action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. Various target analytes were detected in the method blank, however all sample results were greater than the action levels; no data were qualified.

Field Blanks

Equipment rinsate blanks associated with sediment cores were submitted separately from the associated field samples. Based on review of the table of equipment blank associations, equipment blank EB05-07262022 is associated with the samples with results reported in this SDG; results for this EB were reported in CFA SDG 20123. EB05-07262022 was free from all contamination.

Matrix Spike/Matrix Spike Duplicate

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. When the MS/MSD %R values indicate a potential low bias, associated results are estimated (J/UJ-MSL). Only the associated positive results are estimated (J-MSH) if the %R values indicate a potential high bias. No qualifiers are assigned for %R value outliers if the parent concentration is greater than 4x the spike concentration. Precision is evaluated using the relative percent difference (RPD) values calculated between the MS and MSD results. Associated positive results are estimated (J-MSP) if the RPD values indicate uncertainty. Qualifiers are only issued to the parent sample.

The MS/MSD analyses were performed using Sample SIB-SC-I08-2-3-07/28/2022. The following qualifiers were assigned:

ANALYTE	MS %R	MSD %R	RPD	QUALIFIER
1,2,3,6,7,8-HxCDD	OK	139	30.4	J-MSH/MSP
1,2,3,4,6,7,8-HpCDD	Parent conc. > 4x spike		73.1	J-MSP
OCDD	Parent conc. > 4x spike		85.6	J-MSP
2,3,7,8-TCDF	OK	145	32.0	J-MSH/MSP
1,2,3,4,7,8-HxCDF	OK	133	25.1	J-MSH/MSP
1,2,3,4,6,7,8-HpCDF	Parent conc. > 4x spike		62.4	J-MSP
1,2,3,4,7,8,9-HpCDF	OK	131	20.1	J-MSH/MSP
OCDF	Parent conc. > 4x spike		75.4	J-MSP

Certified Reference Material

No certified reference materials were analyzed.

Field Duplicates

For sediment samples, the RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL.

One set of field replicates, SIB-SC-I08-1-2-07/28/2022 & FD-22-07/28/2022, was submitted. The following qualifiers were assigned:

ANALYTE	OUTLIER TYPE	QUALIFIER
1,2,3,4,6,7,8-HpCDF	RPD	J-FDPR
1,2,3,4,6,7,8-HpCDD	RPD	J-FDPR
1,2,3,4,7,8,9-HpCDD	DIFFERENCE	J-FDPA
1,2,3,4,7,8-HxCDF	DIFFERENCE	J-FDPA
1,2,3,6,7,8-HxCDD	DIFFERENCE	J-FDPA
2,3,4,6,7,8-HxCDF	DIFFERENCE	J-FDPA
1,2,3,7,8,9- HxCDD	DIFFERENCE	J-FDPA
2,3,7,8-TCDF	DIFFERENCE	J-FDPA
2,3,7,8-TCDD	DIFFERENCE	J-FDPA
OCDF	RPD	J-FDPR
OCDD	RPD	J-FDPR
Total HpCDF	RPD	J-FDPR
Total HpCDD	RPD	J-FDPR
Total HxCDF	RPD	J-FDPR
Total HxCDD	RPD	J-FDPR
Total PeCDF	RPD	J-FDPR
Total PeCDD	RPD	J-FDPR
Total TCDF	RPD	J-FDPR
Total TCDD	RPD	J-FDPR

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF positive results when using the DB5 GC column for analysis. The DB5 column cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. Although the laboratory used a DB-5MS column which more adequately separates TCDF isomers, the laboratory still performed a second column confirmation on a DB-225 column when 2,3,7,8-TCDF was detected, and the concentration was greater than the reporting limit. Both sets of results were reported. The 2,3,7,8-TCDF results from the DB-5MS column were qualified do-not-report (DNR-EXC) in favor of the results from the DB-225 column.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. These results were K-flagged by the laboratory. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were estimated (J-VJ).

Compound Quantitation

The laboratory E-flagged several sample results to indicate the concentration exceeded the calibration range of the instrument. These results were estimated (J-ACR).

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. With the exceptions noted above, accuracy was acceptable, as demonstrated by the LCS/LCSD, labeled compound, and MS/MSD recoveries. With the exceptions noted above, precision was also acceptable as indicated by the LCS/LCSD, MS/MSD and field duplicate RPDs.

Data were estimated to indicate that EMPC values are estimated maximum possible concentrations. Data were also estimated due to MS/MSD accuracy and precision outliers, field duplicate precision outliers, as well as calibration range exceedances.

Data were flagged as do-not-report (DNR) to indicate which result from multiple reported analyses should not be used. Data that have been flagged DNR should not be used for any purpose.

All other data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r ² below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

QC Element	Reason Code	Definition
Low-Level Calibration Check	LLCH	Low-level calibration check above the upper limit
Low-Level Calibration Check	LLCL	Low-level calibration check below the lower limit
Low-Level Calibration Check	LLXL	Low-level calibration check below the lower limit, extreme discrepancy
Method Blank	MBH	Method blank result \geq LOQ
Method Blank	MBHB	Result is judged to be biased high based on associated method blank result
Method Blank	MBL	Method blank result $<$ LOQ
Matrix Spike	MSH	MS and/or MSD %R above acceptance criterion
Matrix Spike	MSL	MS and/or MSD %R below acceptance criterion
Matrix Spike	MSLX	MS and/or MSD %R below acceptance criterion, extreme discrepancy
Matrix Spike	MSP	MS/MSD RPD above acceptance criterion
Post-Digestion Spike	PDH	Post-digestion spike recovery high
Post-Digestion Spike	PDL	Post-digestion spike recovery low
Post-Digestion Spike	PDLX	Post-digestion spike recovery low, extreme discrepancy
Post-Digestion Spike	PDN	Post-digestion spike not performed or not applicable and serial dilution result not performed or not applicable
Sample Delivery and Condition	BUB	Bubbles $>$ 5 millimeters in volatile organic compounds vial
Sample Delivery and Condition	DAM	Sample container damaged
Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor

REVISED DATA VALIDATION REPORT

HGL – SWAN ISLAND BASIN

Prepared for:

HydroGeoLogic, Inc
11107 Sunset Hills Rd. Suite 400
Reston, VA 20190

Prepared by:

EcoChem, Inc.
500 Union Street, Suite 1010
Seattle, WA 98101

EcoChem Project: C28601-1

SDG: 20420

Revised May 12, 2023

Approved for Release:

A handwritten signature in black ink, appearing to read "Michela Hernandez". The signature is written in a cursive style and is positioned above a horizontal line.

Michela Hernandez
Senior Project Chemist
EcoChem, Inc.

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of compliance review (EPA Stage 2A) performed on sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

This report is revised to include an additional matrix spike and matrix spike duplicate, corrected sample index and qualified data summary table.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Dioxins/Furans	E1613B	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, November 2020).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

Dioxin/Furan Compounds by EPA 1613B

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory and field quality control (QC) samples. All data received a compliance screening level of review (EPA Stage 2A). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES AND MATRIX	VALIDATION LEVEL
20420	17 Sediment	Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

For 4 samples, the date suffix in the sample ID is expressed as DDMMYYYY instead of DD/MM/YYYY in the "sample_name" field. For 10 samples, the "sample_name" field is not populated. All sample IDs in the "sys_sample_code" field match the chain-of-custody.

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table.

✓	Sample Receipt, Preservation, and Holding Times	1	Certified Reference Material
2	Laboratory Blanks	2	Field Duplicates
1	Field Blanks	✓	Target Analyte List
✓	Labeled Compound Recovery	✓	Reporting Limits
2	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	2	Compound Identification
✓	Laboratory Control Samples (LCS/LCSD)	2	Compound Quantitation

✓ Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned K-flags to values when a peak was detected but did not meet identification criteria. These values are considered positive identifications which are "estimated maximum possible concentrations" or EMPC. When these occurred in the method blank the results were evaluated as positive results. When these occurred in the associated samples, any EMPC values that were less than the method blank action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. Various target analytes were detected in the method blanks, however only the following analytes required qualification in one or more samples:

The following field sample results were qualified as not detected:

CLIENT ID	ANALYTE	QUALIFIER
SIB-SC-D08-3-4-08/04/2022	1,2,3,7,8-PeCDF	U-MBL
SIB-SC-D07-5-6-08/04/2022	1,2,3,4,7,8-HxCDF	U-MBL
	1,2,3,7,8-PeCDF	U-MBL
SIB-SC-D08-4-5-08/04/2022	1,2,3,7,8-PeCDF	U-MBL
SIB-SC-D08-5-6-08/04/2022	1,2,3,4,7,8-HxCDF	U-MBL
	1,2,3,6,7,8-HxCDF	U-MBL

Field Blanks

Equipment rinsate blanks associated with sediment cores were submitted separately from the associated field samples. Based on review of the table of equipment blank associations, equipment blank EB06-08/04/2022 is associated with the samples with results reported in this SDG; results for this EB were reported in CFA SDG 20187. EB06-08/04/2022 was free from all contamination.

Matrix Spike/Matrix Spike Duplicate

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. When the MS/MSD %R values indicate a potential low bias, associated results are estimated (J/UJ-MSL). Only the associated positive results are estimated (J-MSH) if the %R values indicate a potential high bias. No qualifiers are assigned for %R value outliers if the parent concentration is greater than 4x the spike concentration. Precision is evaluated using the relative percent difference (RPD) values calculated between the MS and MSD results. Associated positive results are estimated (J-MSP) if the RPD values indicate uncertainty. Qualifiers are only issued to the parent sample.

One set of MS/MSD analyses were performed using Sample SIB-SC-D07-2-3-08/04/2022. The following qualifiers were assigned:

ANALYTE	MS %R	MSD %R	RPD	QUALIFIER
1,2,3,4,6,7,8-HpCDD	Parent conc. > 4x spike		30.1	J-MSP
1,2,3,4,6,7,8,9-OCDD	Parent conc. > 4x spike		37.3	J-MSP
1,2,3,4,6,7,8-HpCDF	63.2	137	27.8	J-MSH,MSL,MSP
OCDF	49.5	OK	21.5	J-MSL,MSP

One set of MS/MSD analyses were performed using Sample SIB-SC-E10-2-3-08/05/2022. The following qualifiers were assigned:

ANALYTE	MS %R	MSD %R	RPD	QUALIFIER
1,2,3,4,6,7,8-HpCDD	55.9	65.2	--	J-MSL
OCDF	39.0	--	--	J-MSL
1,2,3,4,6,7,8-HpCDF	--	--	43.3	J-MSP

Certified Reference Material

No certified reference materials were analyzed.

Field Duplicates

For sediment samples, the RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL.

Two sets of field replicates were submitted. For FD-25-08/04/2022 & SIB-SC-D07-1-2-08/04/2022, field precision was acceptable.

For FD-26-08/05/2022 and SIB-SC-E10-1-2-08/05/2022, the following qualifiers were assigned:

ANALYTE	OUTLIER TYPE	QUALIFIER
1,2,3,4,6,7,8-HpCDF	RPD	J-FDPR
1,2,3,4,6,7,8-HpCDD	RPD	J-FDPR
1,2,3,4,7,8-HxCDF	DIFFERENCE	J-FDPA
1,2,3,6,7,8-HxCDD	DIFFERENCE	J-FDPA
1,2,3,7,8,9-HxCDD	DIFFERENCE	J-FDPA
2,3,7,8-TCDF	DIFFERENCE	J-FDPA
OCDF	RPD	J-FDPR
OCDD	RPD	J-FDPR
Total HpCDD	RPD	J-FDPR
Total HpCDF	RPD	J-FDPR
Total HxCDF	RPD	J-FDPR
Total HxCDD	RPD	J-FDPR
Total PeCDF	RPD	J-FDPR
Total PeCDD	RPD	J-FDPR
Total TCDF	RPD	J-FDPR
Total TCDD	RPD	J-FDPR

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF positive results when using the DB5 GC column for analysis. The DB5 column cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. Although the laboratory used a DB-5MS column which more adequately separates TCDF isomers, the laboratory still performed a second column confirmation on a DB-225 column when 2,3,7,8-TCDF was detected, and the concentration was greater than the reporting limit. Both sets of results were reported. The 2,3,7,8-TCDF results from the DB-5MS column were qualified do-not-report (DNR-EXC) in favor of the results from the DB-225 column.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. These results were K-flagged by the laboratory. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were qualified (J-VJ).

Compound Quantitation

The laboratory flagged sample results with an "E" flag indicating the sample results exceeded the calibrated linear range of the instrument. These results were estimated (J-ACR).

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. With the exceptions noted above, accuracy was acceptable, as demonstrated by the LCS/LCSD, labeled compound, and MS/MSD recoveries. With the exceptions noted above, precision was also acceptable as indicated by the LCS/LCSD, MS/MSD and field duplicate RPDs.

Data were estimated to indicate that EMPC values are estimated maximum possible concentrations. Data were also estimated due to MS/MSD accuracy and precision outliers, field duplicate precision outliers, as well as calibration range exceedances.

Data were flagged as do-not-report (DNR) to indicate which result from multiple reported analyses should not be used. Data that have been flagged DNR should not be used for any purpose.

All other data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r ² below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

QC Element	Reason Code	Definition
Low-Level Calibration Check	LLCH	Low-level calibration check above the upper limit
Low-Level Calibration Check	LLCL	Low-level calibration check below the lower limit
Low-Level Calibration Check	LLXL	Low-level calibration check below the lower limit, extreme discrepancy
Method Blank	MBH	Method blank result \geq LOQ
Method Blank	MBHB	Result is judged to be biased high based on associated method blank result
Method Blank	MBL	Method blank result $<$ LOQ
Matrix Spike	MSH	MS and/or MSD %R above acceptance criterion
Matrix Spike	MSL	MS and/or MSD %R below acceptance criterion
Matrix Spike	MSLX	MS and/or MSD %R below acceptance criterion, extreme discrepancy
Matrix Spike	MSP	MS/MSD RPD above acceptance criterion
Post-Digestion Spike	PDH	Post-digestion spike recovery high
Post-Digestion Spike	PDL	Post-digestion spike recovery low
Post-Digestion Spike	PDLX	Post-digestion spike recovery low, extreme discrepancy
Post-Digestion Spike	PDN	Post-digestion spike not performed or not applicable and serial dilution result not performed or not applicable
Sample Delivery and Condition	BUB	Bubbles $>$ 5 millimeters in volatile organic compounds vial
Sample Delivery and Condition	DAM	Sample container damaged
Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor

DATA VALIDATION REPORT

HGL – SWAN ISLAND BASIN

Prepared for:

HydroGeoLogic, Inc
11107 Sunset Hills Rd. Suite 400
Reston, VA 20190

Prepared by:

EcoChem, Inc.
500 Union Street, Suite 1010
Seattle, WA 98101

EcoChem Project: C28601-1

SDG: 20421

February 17, 2023

Approved for Release:

A handwritten signature in black ink, appearing to read "Michela Hernandez". The signature is written in a cursive style and is positioned above a horizontal line.

Michela Hernandez
Senior Project Chemist
EcoChem, Inc.

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of compliance review (EPA Stage 2A) performed on sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Dioxins/Furans	E1613B	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, November 2020).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

Dioxin/Furan Compounds by EPA 1613B

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory and field quality control (QC) samples. All data received a compliance screening level of review (EPA Stage 2A). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES AND MATRIX	VALIDATION LEVEL
20421	21 Sediment	Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

Sample SIB-SC-E06-1-2-08/08/2022 on the chain-of-custody (COC) was entered as SIB-SC-E06-1-2-08/08/2066 in the EDD. The sample ID was correct in the PDF.

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	1	Certified Reference Material
2	Laboratory Blanks	1	Field Duplicates
1	Field Blanks	✓	Target Analyte List
✓	Labeled Compound Recovery	✓	Reporting Limits
2	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	2	Compound Identification
✓	Laboratory Control Samples (LCS/LCSD)	2	Compound Quantitation

✓ Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

Sample identification (ID) date suffixes were missing the "/" in the EDD as noted on the chains-of-custody (COC).

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned K-flags to values when a peak was detected but did not meet identification criteria. These values are considered positive identifications which are "estimated maximum possible concentrations" or EMPC. When these occurred in the method blank the results were evaluated as positive results. When these occurred in the associated samples, any EMPC values that were less than the method blank action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. Various target analytes were detected in the method blanks, however only the following analytes required qualification in one or more samples:

Extraction Batch 51273: The following field sample results were qualified as not detected:

CLIENT ID	ANALYTE	QUALIFIER
SIB-SC-E09-4-5-08/05/2022	1,2,3,4,7,8-HxCDF	U-MBL
	1,2,3,4,7,8-HxCDF	U-MBL
	1,2,3,7,8-PeCDD	U-MBL
SIB-SC-E09-5-6-08/05/2022	1,2,3,4,7,8-HxCDF	U-MBL
	1,2,3,6,7,8-HxCDF	U-MBL
	1,2,3,7,8-PeCDF	U-MBL
	1,2,3,7,8-PeCDD	U-MBL
SIB-SC-E08-3-4-08/05/2022	1,2,3,7,8-PeCDF	U-MBL
	1,2,3,7,8-PeCDD	U-MBL
SIB-SC-E08-5-6-08/05/2022	1,2,3,7,8-PeCDF	U-MBL
SIB-SC-E07-4-5-08/06/2022	1,2,3,7,8-PeCDF	U-MBL
SIB-SC-E06-5-6-08/08/2022	1,2,3,7,8-PeCDD	U-MBL

Extraction Batch 51294: Although there were positive results in the method blank, all positive results in the associated samples were greater than the action level; no qualifiers were required.

Field Blanks

No field blank samples were submitted with this SDG.

Matrix Spike/Matrix Spike Duplicate

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. Precision is evaluated using the relative percent difference (RPD) values calculated between the MS and MSD results. When the MS/MSD %R values indicate a potential low bias, associated results are estimated (J/UJ-MSL). Only the associated positive results are estimated (J-MSH) if the %R values indicate a potential high bias. Associated positive results are estimated (J-MSP) if the RPD values indicate uncertainty. No qualifiers are assigned for %R value outliers if the parent concentration is greater than 4x the spike concentration. Qualifiers are only issued to the parent sample.

The MS/MSD analyses were performed using Sample SIB-SC-E06-4-5-08/08/2022. The following qualifiers were assigned:

ANALYTE	MS %R	MSD %R	RPD	QUALIFIER
1,2,3,4,6,7,8-HpCDD	131	-120	92.8	J-MSH,MSLX,MSP
1,2,3,4,6,7,8-HpCDF	134	-61.2	85.4	J-MSH,MSLX,MSP
1,2,3,6,7,8-HxCDF	OK	OK	20.2	J-MSP
OCDF	OK	22.9	73.9	J-MSLX,MSP
OCDD	Parent conc. > 4x spike		132	J-MSP

Certified Reference Material

No certified reference materials were analyzed.

Field Duplicates

For sediment samples, the RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL.

One set of field replicates, SIB-SC-E06-1-2-08/08/2022 & FD-28-08/08/2022, was submitted. Field precision was acceptable.

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF positive results when using the DB5 GC column for analysis. The DB5 column cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. Although the laboratory used a DB-5MS column which more adequately separates TCDF isomers, the laboratory still performed a second column confirmation on a DB-225 column when 2,3,7,8-TCDF was detected, and the concentration was greater than the reporting limit. Both sets of results were reported. The 2,3,7,8-TCDF results from the DB-5MS column were qualified do-not-report (DNR-EXC) in favor of the results from the DB-225 column.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. These results were K-flagged by the laboratory. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated

positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were qualified (J-VJ).

Compound Quantitation

The laboratory flagged sample results with an "E" flag indicating the sample results exceeded the calibrated linear range of the instrument. These results were estimated (J-ACR).

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. With the exceptions noted above, accuracy was acceptable, as demonstrated by the LCS/LCSD, labeled compound, and MS/MSD recoveries. With the exceptions noted above, precision was also acceptable as indicated by the LCS/LCSD, MS/MSD and field duplicate RPDs.

Data were qualified as not detected due to method blank contamination. Data were estimated to indicate that EMPC values are estimated maximum possible concentrations. Data were also estimated due to MS/MSD accuracy and precision outliers as well as calibration range exceedances.

Data were flagged as do-not-report (DNR) to indicate which result from multiple reported analyses should not be used. Data that have been flagged DNR should not be used for any purpose.

All other data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r ² below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

QC Element	Reason Code	Definition
Low-Level Calibration Check	LLCH	Low-level calibration check above the upper limit
Low-Level Calibration Check	LLCL	Low-level calibration check below the lower limit
Low-Level Calibration Check	LLXL	Low-level calibration check below the lower limit, extreme discrepancy
Method Blank	MBH	Method blank result \geq LOQ
Method Blank	MBHB	Result is judged to be biased high based on associated method blank result
Method Blank	MBL	Method blank result $<$ LOQ
Matrix Spike	MSH	MS and/or MSD %R above acceptance criterion
Matrix Spike	MSL	MS and/or MSD %R below acceptance criterion
Matrix Spike	MSLX	MS and/or MSD %R below acceptance criterion, extreme discrepancy
Matrix Spike	MSP	MS/MSD RPD above acceptance criterion
Post-Digestion Spike	PDH	Post-digestion spike recovery high
Post-Digestion Spike	PDL	Post-digestion spike recovery low
Post-Digestion Spike	PDLX	Post-digestion spike recovery low, extreme discrepancy
Post-Digestion Spike	PDN	Post-digestion spike not performed or not applicable and serial dilution result not performed or not applicable
Sample Delivery and Condition	BUB	Bubbles $>$ 5 millimeters in volatile organic compounds vial
Sample Delivery and Condition	DAM	Sample container damaged
Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor

DATA VALIDATION REPORT

HGL – SWAN ISLAND BASIN

Prepared for:

HydroGeoLogic, Inc
11107 Sunset Hills Rd. Suite 400
Reston, VA 20190

Prepared by:

EcoChem, Inc.
500 Union Street, Suite 1010
Seattle, WA 98101

EcoChem Project: C28601-1

SDG: 20422

March 30, 2023

Approved for Release:

A handwritten signature in black ink, appearing to read "Michela Hernandez". The signature is written in a cursive style and is positioned above a horizontal line.

Michela Hernandez
Senior Project Chemist
EcoChem, Inc.

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of compliance review (EPA Stage 2A) performed on sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Dioxins/Furans	E1613B	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, November 2022).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

Dioxin/Furan Compounds by EPA 1613B

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory and field quality control (QC) samples. All data received a compliance screening level of review (EPA Stage 2A). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES AND MATRIX	VALIDATION LEVEL
20422	16 Sediment	Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table.

✓	Sample Receipt, Preservation, and Holding Times	1	Certified Reference Material
2	Laboratory Blanks	2	Field Duplicates
1	Field Blanks	✓	Target Analyte List
✓	Labeled Compound Recovery	✓	Reporting Limits
2	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	2	Compound Identification
✓	Laboratory Control Samples (LCS/LCSD)	2	Compound Quantitation

✓ Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned K-flags to values when a peak was detected but did not meet identification criteria. These values are considered positive identifications which are "estimated maximum possible concentrations" or EMPC. When these occurred in the method blank the results were evaluated as positive results. When these occurred in the associated samples, any EMPC values that were less than the method blank action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. Various target analytes were detected in the method blanks, however only the following analytes required qualification in one or more samples:

CLIENT ID	ANALYTE	QUALIFIER
SIB-SC-E05-4-5-08/08/2022	1,2,3,7,8-PeCDF	U-MBL
SIB-SC-E05-5-6-08/08/2022	1,2,3,4,7,8-HeCDF	U-MBL
	1,2,3,6,7,8-HeCDF	U-MBL
SIB-SC-E04-2-3-08/08/2022	1,2,3,7,8-PeCDF	U-MBL
SIB-SC-D05-2-3-08/09/2022	1,2,3,7,8-PeCDF	U-MBL
SIB-SC-D05-3-4-08/09/2022	1,2,3,7,8-PeCDF	U-MBL
	OCDF	U-MBL
SIB-SC-D05-4-5-08/09/2022	1,2,3,7,8-PeCDF	U-MBL
	OCDF	U-MBL
SIB-SC-D05-5-6-08/09/2022	1,2,3,4,7,8-HeCDF	U-MBL

Field Blanks

No field blank samples were submitted with this SDG.

Matrix Spike/Matrix Spike Duplicate

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. No action is taken unless both the MS and MSD %R values are outside the control limits. Precision is evaluated using the relative percent difference (RPD) values calculated between the MS and MSD results. When the MS/MSD %R values indicate a potential low bias, associated results are estimated (J/UJ-MSL). Only the associated positive results are estimated (J-MSH) if the %R values indicate a potential high bias. Associated positive results are estimated (J-MSP) if the RPD values indicate uncertainty. No qualifiers are assigned for %R value outliers if the parent concentration is greater than 4x the spike concentration. Qualifiers are only issued to the parent sample.

The MS/MSD analyses were performed using Sample SIB-SC-E04-2-3-08/08/2022. The following qualifiers were assigned:

ANALYTE	MS %R	MSD %R	RPD	QUALIFIER
1,2,3,4,6,7,8-HpCDD	588	466	OK	J-MSH
1,2,3,4,6,7,8-HpCDF	185	162	OK	J-MSH
OCDF	215	189	OK	J-MSH
OCDD	Parent conc. > 4x spike		21.1	J-MSP

Certified Reference Material

Puget Sound Reference Material was analyzed with this SDG. All concentrations were within the advisory limits.

Field Duplicates

For sediment samples, the RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL.

One set of field replicates, SIB-SC-E04-1-2-08/08/2022 & FD-29-08/08/2022, was submitted. The following results were qualified:

ANALYTE	OUTLIER TYPE	QUALIFIER
1,2,3,4,6,7,8-HpCDF	RPD	J-FDPR
1,2,3,4,6,7,8-HpCDD	RPD	J-FDPR

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF positive results when using the DB5 GC column for analysis. The DB5 column cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. Although the laboratory used a DB-5MS column which more adequately separates TCDF isomers, the laboratory still performed a second column confirmation on a DB-225 column when 2,3,7,8-TCDF was detected, and the concentration was greater than the reporting limit. Both sets of results were reported. The 2,3,7,8-TCDF results from the DB-5MS column were qualified do-not-report (DNR-EXC) in favor of the results from the DB-225 column.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. These results were K-flagged by the laboratory. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were qualified (J-VJ).

Compound Quantitation

The laboratory flagged sample results with an "E" flag indicating the sample results exceeded the calibrated linear range of the instrument. These results were estimated (J-ACR).

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. With the exceptions noted above, accuracy was acceptable, as demonstrated by the LCS/LCSD, labeled compound, and MS/MSD recoveries. With the exceptions noted above, precision was also acceptable as indicated by the LCS/LCSD, MS/MSD and field duplicate RPDs.

Data were qualified as not detected due to method blank contamination. Data were estimated to indicate that EMPC values are estimated maximum possible concentrations. Data were also estimated due to MS/MSD accuracy and precision outliers as well as calibration range exceedances and field duplicate precision outliers.

Data were flagged as do-not-report (DNR) to indicate which result from multiple reported analyses should not be used. Data that have been flagged DNR should not be used for any purpose.

All other data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r ² below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

QC Element	Reason Code	Definition
Low-Level Calibration Check	LLCH	Low-level calibration check above the upper limit
Low-Level Calibration Check	LLCL	Low-level calibration check below the lower limit
Low-Level Calibration Check	LLXL	Low-level calibration check below the lower limit, extreme discrepancy
Method Blank	MBH	Method blank result \geq LOQ
Method Blank	MBHB	Result is judged to be biased high based on associated method blank result
Method Blank	MBL	Method blank result $<$ LOQ
Matrix Spike	MSH	MS and/or MSD %R above acceptance criterion
Matrix Spike	MSL	MS and/or MSD %R below acceptance criterion
Matrix Spike	MSLX	MS and/or MSD %R below acceptance criterion, extreme discrepancy
Matrix Spike	MSP	MS/MSD RPD above acceptance criterion
Post-Digestion Spike	PDH	Post-digestion spike recovery high
Post-Digestion Spike	PDL	Post-digestion spike recovery low
Post-Digestion Spike	PDLX	Post-digestion spike recovery low, extreme discrepancy
Post-Digestion Spike	PDN	Post-digestion spike not performed or not applicable and serial dilution result not performed or not applicable
Sample Delivery and Condition	BUB	Bubbles $>$ 5 millimeters in volatile organic compounds vial
Sample Delivery and Condition	DAM	Sample container damaged
Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor

EcoChem, Inc.

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of compliance review (EPA Stage 2A) performed on sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Dioxins/Furans	E1613B	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, November 2020).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

Dioxin/Furan Compounds by EPA 1613B

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory and field quality control (QC) samples. All data received a compliance screening level of review (EPA Stage 2A). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES AND MATRIX	VALIDATION LEVEL
20423	21 Sediment	Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

For prep/analytical batch 51294/51296, results for the method blank or laboratory control samples were not in the EDD for this SDG. These laboratory QC samples were associated with samples from SDG 20421; results were in the EDD under this SDG. No action was taken.

For 14 samples, the date suffix in the sample ID is expressed as DDMMYYYY instead of DD/MM/YYYY in the "sample_name" field. For 5 samples, the "sample_name" field is not populated. All sample IDs in the "sys_sample_code" field match the chain-of-custody.

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table.

✓	Sample Receipt, Preservation, and Holding Times	1	Certified Reference Material
2	Laboratory Blanks	2	Field Duplicates
1	Field Blanks	✓	Target Analyte List
✓	Labeled Compound Recovery	✓	Reporting Limits
2	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	2	Compound Identification
✓	Laboratory Control Samples (LCS/LCSD)	2	Compound Quantitation

✓ Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned K-flags to values when a peak was detected but did not meet identification criteria. These values are considered positive identifications which are "estimated maximum possible concentrations" or EMPC. When these occurred in the method blank the results were evaluated as positive results. When these occurred in the associated samples, any EMPC values that were less than the method blank action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. Various target analytes were detected in the method blanks, however only the following analytes required qualification in one or more samples:

The following field sample results were qualified as not detected:

CLIENT ID	ANALYTE	QUALIFIER	BATCH
SIB-SC-I04-2-3-08/09/2022	1,2,3,7,8-PeCDF	U-MBL	51294/51296
SIB-SC-F05-3-4-08/10/2022	1,2,3,4,7,8-HxCDF	U-MBL	51311/51313
SIB-SC-F05-4-5-08/10/2022	1,2,3,4,7,8-HxCDF	U-MBL	51311/51313
SIB-SC-F05-5-6-08/10/2022	1,2,3,4,6,7,8-HpCDF	U-MBL	51311/51313
	1,2,3,4,7,8-HxCDF	U-MBL	51311/51313
SIB-SC-B10-1-2-08/11/2022	1,2,3,4,6,7,8-HpCDF	U-MBL	51311/51313
	1,2,3,4,7,8-HxCDF	U-MBL	51311/51313
	OCDF	U-MBL	51311/51313
SIB-SC-B10-2-3-08/11/2022	1,2,3,4,6,7,8-HpCDF	U-MBL	51311/51313
	OCDF	U-MBL	51311/51313
SIB-SC-B10-4-5-08/11/2022	1,2,3,4,7,8-HxCDF	U-MBL	51311/51313
	OCDF	U-MBL	51311/51313
SIB-SC-B10-5-6-08/11/2022	1,2,3,4,6,7,8-HpCDF	U-MBL	51311/51313
	OCDF	U-MBL	51311/51313
	OCDD	U-MBL	51311/51313

Field Blanks

Equipment rinsate blanks associated with sediment cores were submitted separately from the associated field samples. Based on review of the table of equipment blank associations, equipment blank EB07-08092022 is associated with the samples with results reported in this SDG; results for this EB were reported in CFA SDG 20187. EB07-08092022 was free from all contamination.

Matrix Spike/Matrix Spike Duplicate

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. When the MS/MSD %R values indicate a potential low bias, associated results are estimated (J/UJ-MSL). Only the associated positive results are estimated (J-MSH) if the %R values indicate a potential high bias. No qualifiers are assigned for %R value outliers if the parent concentration is greater than 4x the spike concentration. Precision is evaluated using the relative percent difference (RPD) values calculated between the MS and MSD results. Associated positive results are estimated (J-MSP) if the RPD values indicate uncertainty. Qualifiers are only issued to the parent sample.

The MS/MSD analyses were performed using Sample SIB-SC-F05-3-4-08/10/2022 (batch 51313) and SIB-SC-B10-2-3-08/11/2022 (batch 51296). The following qualifiers were assigned to SIB-SC-B10-2-3-08/11/2022:

ANALYTE	MS %R	MSD %R	RPD	QUALIFIER
1,2,3,4,6,7,8-HpCDD	324	156	67.2	J-MSH/MSP
OCDD	2020	529	110	J-MSH/MSP
1,2,3,4,6,7,8-HpCDF	247	139	53.9	J-MSH/MSP
OCDF	203	OK	45	J-MSH/MSP

Certified Reference Material

No certified reference materials were analyzed.

Field Duplicates

For sediment samples, the RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL.

Two sets of field replicates were submitted. For SIB-SC-B10-2-3-08112022 and FD-35-08112022, the parent sample was reported in this SDG and the field duplicate sample was reported in SDG 20425. The difference value for OCDD was greater than the control limit; the OCDD result was estimated (J-FDPA).

For SIB-SC-F05-2-3-08/10/2022 and FD-34-08/10/2022, the following qualifiers were assigned:

ANALYTE	OUTLIER TYPE	QUALIFIER
1,2,3,4,6,7,8-HpCDF	RPD	J-FDPR
1,2,3,4,6,7,8-HpCDD	RPD	J-FDPR
2,3,7,8-TCDF	DIFFERENCE	J-FDPA
OCDF	RPD	J-FDPR
OCDD	RPD	J-FDPR
Total HpCDF	RPD	J-FDPR
Total HpCDD	RPD	J-FDPR
Total HxCDF	RPD	J-FDPR
Total HxCDD	RPD	J-FDPR

ANALYTE	OUTLIER TYPE	QUALIFIER
Total PeCDF	RPD	J-FDPR
Total PeCDD	DIFFERENCE	J-FDPA
Total TCDF	RPD	J-FDPR
Total TCDD	RPD	J-FDPR

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF positive results when using the DB5 GC column for analysis. The DB5 column cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. Although the laboratory used a DB-5MS column which more adequately separates TCDF isomers, the laboratory still performed a second column confirmation on a DB-225 column when 2,3,7,8-TCDF was detected, and the concentration was greater than the reporting limit. Both sets of results were reported. The 2,3,7,8-TCDF results from the DB-5MS column were qualified do-not-report (DNR-EXC) in favor of the results from the DB-225 column.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. These results were K-flagged by the laboratory. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were qualified (J-VJ).

Compound Quantitation

The laboratory flagged sample results with an "E" flag indicating the sample results exceeded the calibrated linear range of the instrument. These results were estimated (J-ACR).

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. With the exceptions noted above, accuracy was acceptable, as demonstrated by the LCS/LCSD, labeled compound, and MS/MSD recoveries. With the exceptions noted above, precision was also acceptable as indicated by the LCS/LCSD, MS/MSD and field duplicate RPDs.

Data were estimated to indicate that EMPC values are estimated maximum possible concentrations. Detection limits were elevated due to method blank contamination. Data were also estimated due to MS/MSD accuracy and precision outliers, field duplicate precision outliers, as well as calibration range exceedances.

Data were flagged as do-not-report (DNR) to indicate which result from multiple reported analyses should not be used. Data that have been flagged DNR should not be used for any purpose.

All other data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r ² below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

QC Element	Reason Code	Definition
Low-Level Calibration Check	LLCH	Low-level calibration check above the upper limit
Low-Level Calibration Check	LLCL	Low-level calibration check below the lower limit
Low-Level Calibration Check	LLXL	Low-level calibration check below the lower limit, extreme discrepancy
Method Blank	MBH	Method blank result \geq LOQ
Method Blank	MBHB	Result is judged to be biased high based on associated method blank result
Method Blank	MBL	Method blank result $<$ LOQ
Matrix Spike	MSH	MS and/or MSD %R above acceptance criterion
Matrix Spike	MSL	MS and/or MSD %R below acceptance criterion
Matrix Spike	MSLX	MS and/or MSD %R below acceptance criterion, extreme discrepancy
Matrix Spike	MSP	MS/MSD RPD above acceptance criterion
Post-Digestion Spike	PDH	Post-digestion spike recovery high
Post-Digestion Spike	PDL	Post-digestion spike recovery low
Post-Digestion Spike	PDLX	Post-digestion spike recovery low, extreme discrepancy
Post-Digestion Spike	PDN	Post-digestion spike not performed or not applicable and serial dilution result not performed or not applicable
Sample Delivery and Condition	BUB	Bubbles $>$ 5 millimeters in volatile organic compounds vial
Sample Delivery and Condition	DAM	Sample container damaged
Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor

EcoChem, Inc.

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of compliance review (EPA Stage 2A) performed on sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Dioxins/Furans	E1613B	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, November 2020).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

Dioxin/Furan Compounds by EPA 1613B

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory and field quality control (QC) samples. All data received a compliance screening level of review (EPA Stage 2A). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES AND MATRIX	VALIDATION LEVEL
20425	17 Sediment	Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

For 15 samples, the "sample_name" field is not populated. All sample IDs in the "sys_sample_code" field match the chain-of-custody.

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table.

✓	Sample Receipt, Preservation, and Holding Times	1	Certified Reference Material
2	Laboratory Blanks	2	Field Duplicates
1	Field Blanks	✓	Target Analyte List
✓	Labeled Compound Recovery	✓	Reporting Limits
2	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	2	Compound Identification
✓	Laboratory Control Samples (LCS/LCSD)	2	Compound Quantitation

✓ Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned K-flags to values when a peak was detected but did not meet identification criteria. These values are considered positive identifications which are "estimated maximum possible concentrations" or EMPC. When these occurred in the method blank the results were evaluated as positive results. When these occurred in the associated samples, any EMPC values that were less than the method blank action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. Various target analytes were detected in the method blank, however only the following analytes required qualification in one or more samples:

The following field sample results were qualified as not detected:

CLIENT ID	ANALYTE	QUALIFIER
FD-35-08/11/2022	1,2,3,4,6,7,8-HEPTACHLORODIBENZOFURAN	U-MBL
	1,2,3,4,6,7,8-HEPTACHLORODIBENZO-P-DIOXIN	U-MBL
	1,2,3,4,7,8-HEXACHLORODIBENZOFURAN	U-MBL
	1,2,3,6,7,8-HEXACHLORODIBENZOFURAN	U-MBL
	1,2,3,7,8-PENTACHLORODIBENZOFURAN	U-MBL
	1,2,3,7,8-PENTACHLORODIBENZO-P-DIOXIN	U-MBL
	2,3,4,6,7,8-HEXACHLORODIBENZOFURAN	U-MBL
	OCTACHLORODIBENZOFURAN	U-MBL
	OCTACHLORODIBENZO-P-DIOXIN	U-MBL
SIB-SC-F06-4-5-08/16/2022	1,2,3,7,8-PENTACHLORODIBENZOFURAN	U-MBL
	1,2,3,7,8-PENTACHLORODIBENZO-P-DIOXIN	U-MBL
SIB-SC-F06-5-6-08/16/2022	1,2,3,4,7,8-HEXACHLORODIBENZOFURAN	U-MBL
	1,2,3,7,8,9-HEXACHLORODIBENZOFURAN	U-MBL
	1,2,3,7,8-PENTACHLORODIBENZOFURAN	U-MBL

	1,2,3,7,8-PENTACHLORODIBENZOFURAN	U-MBL
	1,2,3,7,8-PENTACHLORODIBENZO-P-DIOXIN	U-MBL
SIB-SC-G04-4-5-08/16/2022	1,2,3,4,7,8-HEXACHLORODIBENZOFURAN	U-MBL
	1,2,3,7,8-PENTACHLORODIBENZOFURAN	U-MBL
	2,3,4,7,8-PENTACHLORODIBENZOFURAN	U-MBL
SIB-SC-G04-5-6-08/16/2022	1,2,3,4,7,8-HEXACHLORODIBENZOFURAN	U-MBL
	1,2,3,6,7,8-HEXACHLORODIBENZOFURAN	U-MBL
	1,2,3,7,8-PENTACHLORODIBENZOFURAN	U-MBL
	2,3,4,6,7,8-HEXACHLORODIBENZOFURAN	U-MBL
	2,3,4,7,8-PENTACHLORODIBENZOFURAN	U-MBL

Field Blanks

Equipment rinsate blanks associated with sediment cores were submitted separately from the associated field samples. Based on review of the table of equipment blank associations, equipment blank EB07-08092022 and EB08-08212022 are associated with the samples with results reported in this SDG; results for this EB were reported in CFA SDGs 20187 and 20283. EB07-08092022 was free from all contamination. EB08-08212022 was not evaluated as SDG 20283 was not submitted to EcoChem.

Matrix Spike/Matrix Spike Duplicate

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. When the MS/MSD %R values indicate a potential low bias, associated results are estimated (J/UJ-MSL). Only the associated positive results are estimated (J-MSH) if the %R values indicate a potential high bias. No qualifiers are assigned for %R value outliers if the parent concentration is greater than 4x the spike concentration. Precision is evaluated using the relative percent difference (RPD) values calculated between the MS and MSD results. Associated positive results are estimated (J-MSP) if the RPD values indicate uncertainty. Qualifiers are only issued to the parent sample.

The MS/MSD analyses were performed using Samples SIB-SC-F06-3-4-08/16/2022 and SIB-SC-G04-4-5-08/16/2022. The following qualifiers were assigned to SIB-SC-G04-4-5-08/16/2022:

ANALYTE	MS %R	MSD %R	RPD	QUALIFIER
OCDD	OK	221	38.1	J-MSH/MSP

Certified Reference Material

No certified reference materials were analyzed.

Field Duplicates

For sediment samples, the RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL.

Three sets of field duplicates were submitted.

For SIB-SC-B10-2-3-08112022 and FD-35-08112022, the field duplicate sample was reported in this SDG and the parent sample was reported in SDG 20423. The difference value for OCDD was greater than the control limit; the OCDD result was estimated (UJ-FDPA).

For SIB-SC-G04-4-5-08/16/2022 & FD-39-08/16/2022, the parent sample was reported in this SDG and the field duplicate sample was reported in SDG 20426. Field precision was acceptable.

For SIB-SC-F06-2-3-08/16/2022 & FD-38-08/16/2022, the following qualifiers were assigned:

ANALYTE	OUTLIER TYPE	QUALIFIER
1,2,3,4,6,7,8-HpCDF	RPD	J-FDPR
1,2,3,4,6,7,8-HpCDD	RPD	J-FDPR
OCDF	RPD	J-FDPR
OCDD	RPD	J-FDPR
Total HxCDF	RPD	J-FDPR
Total HxCDD	RPD	J-FDPR
Total PeCDF	RPD	J-FDPR
Total PeCDD	RPD	J-FDPR
Total TCDF	DIFFERENCE	J-FDPA
Total TCDD	RPD	J-FDPR
Total HpCDF	DIFFERENCE	J-FDPA

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF positive results when using the DB5 GC column for analysis. The DB5 column cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. Although the laboratory used a DB-5MS column which more adequately separates TCDF isomers, the laboratory still performed a second column confirmation on a DB-225 column when 2,3,7,8-TCDF was detected, and the concentration was greater than the reporting limit. Both sets of results were reported. The 2,3,7,8-TCDF results from the DB-5MS column were qualified do-not-report (DNR-EXC) in favor of the results from the DB-225 column.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. These results were K-flagged by the laboratory. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were qualified (J-VJ).

Compound Quantitation

The laboratory flagged sample results with an "E" flag indicating the sample results exceeded the calibrated linear range of the instrument. These results were estimated (J-ACR).

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. With the exceptions noted above, accuracy was acceptable as demonstrated by the LCS/LCSD, labeled compound, and MS/MSD recoveries. With the exceptions noted above, precision was also acceptable as indicated by the LCS/LCSD, MS/MSD and field duplicate RPDs.

Data were estimated to indicate that EMPC values are estimated maximum possible concentrations. Detection limits were elevated due to method blank contamination. Data were also estimated due

to MS/MSD accuracy and precision outliers, field duplicate precision outliers, as well as calibration range exceedances.

Data were flagged as do-not-report (DNR) to indicate which result from multiple reported analyses should not be used. Data that have been flagged DNR should not be used for any purpose.

All other data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r ² below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

QC Element	Reason Code	Definition
Low-Level Calibration Check	LLCH	Low-level calibration check above the upper limit
Low-Level Calibration Check	LLCL	Low-level calibration check below the lower limit
Low-Level Calibration Check	LLXL	Low-level calibration check below the lower limit, extreme discrepancy
Method Blank	MBH	Method blank result \geq LOQ
Method Blank	MBHB	Result is judged to be biased high based on associated method blank result
Method Blank	MBL	Method blank result $<$ LOQ
Matrix Spike	MSH	MS and/or MSD %R above acceptance criterion
Matrix Spike	MSL	MS and/or MSD %R below acceptance criterion
Matrix Spike	MSLX	MS and/or MSD %R below acceptance criterion, extreme discrepancy
Matrix Spike	MSP	MS/MSD RPD above acceptance criterion
Post-Digestion Spike	PDH	Post-digestion spike recovery high
Post-Digestion Spike	PDL	Post-digestion spike recovery low
Post-Digestion Spike	PDLX	Post-digestion spike recovery low, extreme discrepancy
Post-Digestion Spike	PDN	Post-digestion spike not performed or not applicable and serial dilution result not performed or not applicable
Sample Delivery and Condition	BUB	Bubbles $>$ 5 millimeters in volatile organic compounds vial
Sample Delivery and Condition	DAM	Sample container damaged
Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor

EcoChem, Inc.

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of compliance review (EPA Stage 2A) performed on sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Dioxins/Furans	E1613B	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, November 2020).

EcoChem’s goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

Dioxin/Furan Compounds by EPA 1613B

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory and field quality control (QC) samples. All data received a compliance screening level of review (EPA Stage 2A). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES AND MATRIX	VALIDATION LEVEL
20426	22 Sediment	Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

For 13 samples, the date suffix in the sample ID is expressed as DDMMYYYY instead of DD/MM/YYYY in the "sample_name" field. For 5 samples, the "sample_name" field is not populated. All sample IDs in the "sys_sample_code" field match the chain-of-custody.

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table.

✓	Sample Receipt, Preservation, and Holding Times	1	Certified Reference Material
2	Laboratory Blanks	2	Field Duplicates
1	Field Blanks	✓	Target Analyte List
✓	Labeled Compound Recovery	✓	Reporting Limits
2	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	2	Compound Identification
✓	Laboratory Control Samples (LCS/LCSD)	✓	Compound Quantitation

✓ Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported

in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned K-flags to values when a peak was detected but did not meet identification criteria. These values are considered positive identifications which are “estimated maximum possible concentrations” or EMPC. When these occurred in the method blank the results were evaluated as positive results. When these occurred in the associated samples, any EMPC values that were less than the method blank action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. Various target analytes were detected in the method blanks, however only 1,2,3,4,6,7,8-HpCDF required qualification in one or more samples. The following field sample results were qualified as not detected:

CLIENT ID	ANALYTE	QUALIFIER
SIB-SC-H04-1-2-08/16/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
SIB-SC-H04-3-4-08/16/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
SIB-SC-H04-4-5-08/16/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
SIB-SC-B08-4-5-08/16/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
SIB-SC-B08-5-6-08/16/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
FD-37-08/16/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
SIB-SC-D06-4-5-08/16/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
SIB-SC-D06-5-6-08/16/2022	1,2,3,4,6,7,8-HpCDF	U-MBL

Field Blanks

Equipment rinsate blanks associated with sediment cores were submitted separately from the associated field samples. Based on review of the table of equipment blank associations, equipment blank EB08-08212022 is associated with the samples with results reported in this SDG; results for this EB were reported in CFA SDG 20283. EB08-08212022 was not evaluated as SDG 20283 was not submitted to EcoChem for review.

Matrix Spike/Matrix Spike Duplicate

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. When the MS/MSD %R values indicate a potential low bias, associated results are estimated (J/UJ-MSL). Only the associated positive results are estimated (J-MSH) if the %R values indicate a potential high bias. No qualifiers are assigned for %R value outliers if the parent concentration is greater than 4x the spike concentration. Precision is evaluated using the relative percent difference (RPD) values calculated between the MS and MSD results. Associated positive results are estimated (J-MSP) if the RPD values indicate uncertainty. Qualifiers are only issued to the parent sample.

The MS/MSD analyses were performed using Sample SIB-SC-E03-3-4-08/16/2022 The following qualifiers were assigned:

ANALYTE	MS %R	MSD %R	RPD	QUALIFIER
OCDD	-44.3	-77.3	OK	J-MSLX

Certified Reference Material

No certified reference materials were analyzed.

Field Duplicates

For sediment samples, the RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL.

Three sets of field duplicates were submitted.

For SIB-SC-G04-4-5-08/16/2022 & FD-39-08/16/2022, the field duplicate sample was reported in this SDG and the parent sample was reported in SDG 20425. Field precision was acceptable.

For SIB-SC-B08-4-5-08/16/2022 & FD-37-08/16/2022, the following qualifiers were assigned:

ANALYTE	OUTLIER TYPE	QUALIFIER
OCDD	DIFFERENCE	J-FDPA

For SIB-SC-E03-2-3-08/17/2022 & FD-41-08/17/2022, the parent sample was reported in this SDG and the field duplicate sample was reported in SDG 20427. The following qualifiers were assigned:

ANALYTE	OUTLIER TYPE	QUALIFIER
1,2,3,4,6,7,8-HpCDF	RPD	J-FDPR
Total HXCDF	RPD	J-FDPR
Total HpCDF	RPD	J-FDPR

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF positive results when using the DB5 GC column for analysis. The DB5 column cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. Although the laboratory used a DB-5MS column which more adequately separates TCDF isomers, the laboratory still performed a second column confirmation on a DB-225 column when 2,3,7,8-TCDF was detected, and the concentration was greater than the reporting limit. Both sets of results were reported. The 2,3,7,8-TCDF results from the DB-5MS column were qualified do-not-report (DNR-EXC) in favor of the results from the DB-225 column.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. These results were K-flagged by the laboratory. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were qualified (J-VJ).

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. With the exceptions noted above, accuracy was acceptable, as demonstrated by the LCS/LCSD, labeled compound, and MS/MSD recoveries. With the exceptions noted above, precision was also acceptable as indicated by the LCS/LCSD, MS/MSD and field duplicate RPDs.

Data were estimated to indicate that EMPC values are estimated maximum possible concentrations. Detection limits were elevated due to method blank contamination. Data were also estimated due to MS/MSD accuracy outliers and field duplicate precision outliers.

Data were flagged as do-not-report (DNR) to indicate which result from multiple reported analyses should not be used. Data that have been flagged DNR should not be used for any purpose.

All other data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r ² below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

QC Element	Reason Code	Definition
Low-Level Calibration Check	LLCH	Low-level calibration check above the upper limit
Low-Level Calibration Check	LLCL	Low-level calibration check below the lower limit
Low-Level Calibration Check	LLXL	Low-level calibration check below the lower limit, extreme discrepancy
Method Blank	MBH	Method blank result \geq LOQ
Method Blank	MBHB	Result is judged to be biased high based on associated method blank result
Method Blank	MBL	Method blank result $<$ LOQ
Matrix Spike	MSH	MS and/or MSD %R above acceptance criterion
Matrix Spike	MSL	MS and/or MSD %R below acceptance criterion
Matrix Spike	MSLX	MS and/or MSD %R below acceptance criterion, extreme discrepancy
Matrix Spike	MSP	MS/MSD RPD above acceptance criterion
Post-Digestion Spike	PDH	Post-digestion spike recovery high
Post-Digestion Spike	PDL	Post-digestion spike recovery low
Post-Digestion Spike	PDLX	Post-digestion spike recovery low, extreme discrepancy
Post-Digestion Spike	PDN	Post-digestion spike not performed or not applicable and serial dilution result not performed or not applicable
Sample Delivery and Condition	BUB	Bubbles $>$ 5 millimeters in volatile organic compounds vial
Sample Delivery and Condition	DAM	Sample container damaged
Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor

DATA VALIDATION REPORT

HGL – SWAN ISLAND BASIN

Prepared for:

HydroGeoLogic, Inc
11107 Sunset Hills Rd. Suite 400
Reston, VA 20190

Prepared by:

EcoChem, Inc.
500 Union Street, Suite 1010
Seattle, WA 98101

EcoChem Project: C28601-1

SDG: 20427

May 10, 2023

Approved for Release:

A handwritten signature in black ink, appearing to read "Michela Hernandez". The signature is written in a cursive style and is positioned above a horizontal line.

Michela Hernandez
Senior Project Chemist
EcoChem, Inc.

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of compliance review (EPA Stage 2A) performed on sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Dioxins/Furans	E1613B	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, November 2020).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

Dioxin/Furan Compounds by EPA 1613B

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory and field quality control (QC) samples. All data received a compliance screening level of review (EPA Stage 2A). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES AND MATRIX	VALIDATION LEVEL
20427	22 Sediment	Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

For 20 samples, the date suffix in the sample ID is expressed as DDMMYYYY instead of DD/MM/YYYY in the "sample_name" field. All sample IDs in the "sys_sample_code" field match the chain-of-custody.

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table.

✓	Sample Receipt, Preservation, and Holding Times	1	Certified Reference Material
2	Laboratory Blanks	2	Field Duplicates
1	Field Blanks	✓	Target Analyte List
✓	Labeled Compound Recovery	✓	Reporting Limits
2	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	2	Compound Identification
✓	Laboratory Control Samples (LCS/LCSD)	2	Compound Quantitation

✓ Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified

as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned K-flags to values when a peak was detected but did not meet identification criteria. These values are considered positive identifications which are “estimated maximum possible concentrations” or EMPC. When these occurred in the method blank the results were evaluated as positive results. When these occurred in the associated samples, any EMPC values that were less than the method blank action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. Various target analytes were detected in the method blanks, however only the following analytes required qualification in one or more samples and results were qualified as not detected:

CLIENT ID	ANALYTE	QUALIFIER
SIB-SC-C06-1-2-08/17/2022	1,2,3,4,7,8-HxCDF	U-MBL
	1,2,3,4,6,7,8-HpCDF	U-MBL
	1,2,3,6,7,8-HxCDF	U-MBL
SIB-SC-C06-2-3-08/17/2022	1,2,3,4,7,8-HxCDF	U-MBL

SIB-SC-C07-1-2-08/18/2022	1,2,3,4,7,8-HxCDF	U-MBL
	1,2,3,4,6,7,8-HpCDF	U-MBL
SIB-SC-C07-2-3-08/18/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
SIB-SC-C07-3-4-08/18/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
SIB-SC-C07-4-5-08/18/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
SIB-SC-C07-5-6-08/18/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
	1,2,3,4,6,7,8-HpCDD	U-MBL
SIB-SC-F03-1-2-08/18/2022	1,2,3,6,7,8-HxCDF	U-MBL
SIB-SC-F03-2-3-08/18/2022	1,2,3,6,7,8-HxCDF	U-MBL

Field Blanks

Equipment rinsate blanks associated with sediment cores were submitted separately from the associated field samples. Based on review of the table of equipment blank associations, equipment blank EB08-08212022 is associated with the samples with results reported in this SDG; results for this EB were reported in CFA SDG 20283. EB08-08212022 was not evaluated as SDG 20283 was not submitted to EcoChem for review.

Matrix Spike/Matrix Spike Duplicate

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. When the MS/MSD %R values indicate a potential low bias, associated results are estimated (J/UJ-MSL). Only the associated positive results are estimated (J-MSH) if the %R values indicate a potential high bias. No qualifiers are assigned for %R value outliers if the parent concentration is

greater than 4x the spike concentration. Precision is evaluated using the relative percent difference (RPD) values calculated between the MS and MSD results. Associated positive results are estimated (J-MSP) if the RPD values indicate uncertainty. Qualifiers are only issued to the parent sample.

The MS/MSD analyses were performed using Sample SIB-SC-F03-2-3-08/18/2022. The following qualifiers were assigned:

ANALYTE	MS %R	MSD %R	RPD	QUALIFIER
1,2,3,4,6,7,8-HpCDD	57.2	195	62.1	J-MSL/MSH/MSP
OCDD	-101	481	94.5	J-MSLX/MSHX/MSP
OCDF	17.6	OK	110	J-MSL/MSP

Certified Reference Material

No certified reference materials were analyzed.

Field Duplicates

For sediment samples, the RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL.

Two sets of field duplicates were submitted.

For SIB-SC-E03-2-3-08/17/2022 & FD-41-08/17/2022, the field duplicate sample was reported in this SDG and the parent sample was reported in SDG 20426. The following qualifiers were assigned:

ANALYTE	OUTLIER TYPE	QUALIFIER
1,2,3,4,6,7,8-HpCDF	RPD	J-FDPR
Total HxCDF	RPD	J-FDPR
Total HpCDF	RPD	J-FDPR

For SIB-SC-F03-3-4-08/18/2022 & FD-42-08/18/2022, the following qualifiers were assigned:

ANALYTE	OUTLIER TYPE	QUALIFIER
1,2,3,4,6,7,8-HpCDF	RPD	J-FDPR
1,2,3,4,6,7,8-HpCDD	RPD	J-FDPR
1,2,3,6,7,8-HxCDD	DIFFERENCE	J-FDPA
2,3,7,8-TCDF	DIFFERENCE	J-FDPA
2,3,7,8-TCDD	DIFFERENCE	J-FDPA
OCDF	RPD	J-FDPR
OCDD	RPD	J-FDPR
Total HxCDF	RPD	J-FDPR
Total HxCDD	RPD	J-FDPR
Total PeCDF	RPD	J-FDPR
Total PeCDD	DIFFERENCE	J-FDPA

ANALYTE	OUTLIER TYPE	QUALIFIER
Total TCDF	DIFFERENCE	J-FDPA
Total TCDD	RPD	J-FDPR
Total HpCDF	DIFFERENCE	J-FDPA

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF positive results when using the DB5 GC column for analysis. The DB5 column cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. Although the laboratory used a DB-5MS column which more adequately separates TCDF isomers, the laboratory still performed a second column confirmation on a DB-225 column when 2,3,7,8-TCDF was detected, and the concentration was greater than the reporting limit. Both sets of results were reported. The 2,3,7,8-TCDF results from the DB-5MS column were qualified do-not-report (DNR-EXC) in favor of the results from the DB-225 column.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. These results were K-flagged by the laboratory. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were qualified (J-VJ).

Compound Quantitation

The laboratory flagged sample results with an "E" flag indicating the sample results exceeded the calibrated linear range of the instrument. These results were estimated (J-ACR).

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. With the exceptions noted above, accuracy was acceptable, as demonstrated by the LCS/LCSD, labeled compound, and MS/MSD recoveries. With the exceptions noted above, precision was also acceptable as indicated by the LCS/LCSD, MS/MSD and field duplicate RPDs.

Data were estimated to indicate that EMPC values are estimated maximum possible concentrations. Detection limits were elevated due to method blank contamination. Data were also estimated due to MS/MSD accuracy and precision outliers, field duplicate precision outliers, as well as calibration range exceedances.

Data were flagged as do-not-report (DNR) to indicate which result from multiple reported analyses should not be used. Data that have been flagged DNR should not be used for any purpose.

All other data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r ² below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

QC Element	Reason Code	Definition
Low-Level Calibration Check	LLCH	Low-level calibration check above the upper limit
Low-Level Calibration Check	LLCL	Low-level calibration check below the lower limit
Low-Level Calibration Check	LLXL	Low-level calibration check below the lower limit, extreme discrepancy
Method Blank	MBH	Method blank result \geq LOQ
Method Blank	MBHB	Result is judged to be biased high based on associated method blank result
Method Blank	MBL	Method blank result $<$ LOQ
Matrix Spike	MSH	MS and/or MSD %R above acceptance criterion
Matrix Spike	MSL	MS and/or MSD %R below acceptance criterion
Matrix Spike	MSLX	MS and/or MSD %R below acceptance criterion, extreme discrepancy
Matrix Spike	MSP	MS/MSD RPD above acceptance criterion
Post-Digestion Spike	PDH	Post-digestion spike recovery high
Post-Digestion Spike	PDL	Post-digestion spike recovery low
Post-Digestion Spike	PDLX	Post-digestion spike recovery low, extreme discrepancy
Post-Digestion Spike	PDN	Post-digestion spike not performed or not applicable and serial dilution result not performed or not applicable
Sample Delivery and Condition	BUB	Bubbles $>$ 5 millimeters in volatile organic compounds vial
Sample Delivery and Condition	DAM	Sample container damaged
Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor

DATA VALIDATION REPORT

HGL – SWAN ISLAND BASIN

Prepared for:

HydroGeoLogic, Inc
11107 Sunset Hills Rd. Suite 400
Reston, VA 20190

Prepared by:

EcoChem, Inc.
500 Union Street, Suite 1010
Seattle, WA 98101

EcoChem Project: C28601-1

SDG: 20428

April 20, 2023

Approved for Release:

A handwritten signature in black ink, appearing to read "Michela Hernandez". The signature is written in a cursive style and is positioned above a horizontal line.

Michela Hernandez
Senior Project Chemist
EcoChem, Inc.

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of full review (EPA Stage 4) performed on sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Dioxins/Furans	E1613B	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, November 2022).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

Dioxin/Furan Compounds by EPA 1613B

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory and field quality control (QC) samples. All data received a full level of review (EPA Stage 4). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES AND MATRIX	VALIDATION LEVEL
20428	18 Sediment	Stage 4

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

For one sample, the date suffix in the sample ID is expressed as DDMMYYYY instead of DD/MM/YYYY in the "sample_name" field. For 14 samples, the "sample_name" field is not populated. All sample IDs in the "sys_sample_code" field match the chain-of-custody.

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table.

✓	Sample Receipt, Preservation, and Holding Times	✓	Laboratory Control Samples (LCS/LCSD)
✓	System Performance and Resolution Checks	1	Certified Reference Material
✓	Initial Calibration (ICAL)	1	Field Duplicates
✓	Calibration Verification (CCAL)	✓	Target Analyte List
✓	Laboratory Blanks	✓	Reporting Limits
1	Field Blanks	2	Compound Identification
✓	Labeled Compound Recovery	2	Compound Quantitation
✓	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	1	Calculation Verification

✓ Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Field Blanks

No field blank samples were submitted with this SDG.

Certified Reference Material

Puget Sound Reference Material was analyzed with this SDG. All concentrations were within the advisory limits.

Field Duplicates

For sediment samples, the relative percent difference (RPD) control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL.

One set of field duplicates, SIB-SC-H03-2-3-08/18/2022 & FD-43-08/18/2022, was submitted. Field precision was acceptable.

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF positive results when using the DB5 GC column for analysis. The DB5 column cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. Although the laboratory used a DB-5MS column which more adequately separates TCDF isomers, the laboratory still performed a second column confirmation on a DB-225 column when 2,3,7,8-TCDF was detected, and the concentration was greater than the reporting limit. Both sets of results were reported. The 2,3,7,8-TCDF results from the DB-5MS column were qualified do-not-report (DNR-EXC) in favor of the results from the DB-225 column.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. These results were K-flagged by the laboratory. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were estimated (J-VJ).

Compound Quantitation

The laboratory E-flagged several sample results to indicate the concentration exceeded the calibration range of the instrument. These results were estimated (J-ACR).

Calculation Verification

Calculation verifications were performed for this sample delivery group (SDG). No calculation or transcription errors were found.

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. Accuracy was acceptable, as demonstrated by the labeled compound, LCS/LCSD, SRM, and MS/MSD recoveries. Precision was also acceptable as indicated by the LCS/LCSD, MS/MSD, and field duplicate RPD values.

Data were estimated to indicate that EMPC values are estimated maximum possible concentrations. Data were also estimated due to calibration range exceedances.

Data were flagged as do-not-report (DNR) to indicate which result (from multiple reported analyses) should not be used. Data that have been flagged DNR should not be used for any purpose.

All other data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r ² below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

QC Element	Reason Code	Definition
Low-Level Calibration Check	LLCH	Low-level calibration check above the upper limit
Low-Level Calibration Check	LLCL	Low-level calibration check below the lower limit
Low-Level Calibration Check	LLXL	Low-level calibration check below the lower limit, extreme discrepancy
Method Blank	MBH	Method blank result \geq LOQ
Method Blank	MBHB	Result is judged to be biased high based on associated method blank result
Method Blank	MBL	Method blank result $<$ LOQ
Matrix Spike	MSH	MS and/or MSD %R above acceptance criterion
Matrix Spike	MSL	MS and/or MSD %R below acceptance criterion
Matrix Spike	MSLX	MS and/or MSD %R below acceptance criterion, extreme discrepancy
Matrix Spike	MSP	MS/MSD RPD above acceptance criterion
Post-Digestion Spike	PDH	Post-digestion spike recovery high
Post-Digestion Spike	PDL	Post-digestion spike recovery low
Post-Digestion Spike	PDLX	Post-digestion spike recovery low, extreme discrepancy
Post-Digestion Spike	PDN	Post-digestion spike not performed or not applicable and serial dilution result not performed or not applicable
Sample Delivery and Condition	BUB	Bubbles $>$ 5 millimeters in volatile organic compounds vial
Sample Delivery and Condition	DAM	Sample container damaged
Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor

DATA VALIDATION REPORT

HGL – SWAN ISLAND BASIN

Prepared for:

HydroGeoLogic, Inc
11107 Sunset Hills Rd. Suite 400
Reston, VA 20190

Prepared by:

EcoChem, Inc.
500 Union Street, Suite 1010
Seattle, WA 98101

EcoChem Project: C28601-1

SDG: 20429

May 10, 2023

Approved for Release:

A handwritten signature in black ink, appearing to read "Michela Hernandez". The signature is written in a cursive style and is positioned above a horizontal line.

Michela Hernandez
Senior Project Chemist
EcoChem, Inc.

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of compliance review (EPA Stage 2A) performed on sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Dioxins/Furans	E1613B	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, November 2020).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

HGL – Swan Island Basin

Dioxin/Furan Compounds by EPA 1613B

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory and field quality control (QC) samples. All data received a compliance screening level of review (EPA Stage 2A). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES AND MATRIX	VALIDATION LEVEL
20429	11 Sediment	Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

For 9 samples, the date suffix in the sample ID is expressed as DDMMYYYY instead of DD/MM/YYYY in the "sample_name" field. All sample IDs in the "sys_sample_code" field match the chain-of-custody.

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table.

✓	Sample Receipt, Preservation, and Holding Times	1	Certified Reference Material
2	Laboratory Blanks	2	Field Duplicates
1	Field Blanks	✓	Target Analyte List
✓	Labeled Compound Recovery	✓	Reporting Limits
2	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	2	Compound Identification
✓	Laboratory Control Samples (LCS/LCSD)	2	Compound Quantitation

✓ Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified

as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned K-flags to values when a peak was detected but did not meet identification criteria. These values are considered positive identifications which are "estimated maximum possible concentrations" or EMPC. When these occurred in the method blank the results were evaluated as positive results. When these occurred in the associated samples, any EMPC values that were less than the method blank action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. Various target analytes were detected in the method blanks, however only the following analytes required qualification in one or more samples:

The following field sample results were qualified as not detected:

CLIENT ID	ANALYTE	QUALIFIER
SIB-SC-C09-4-5-08/19/2022	1,2,3,7,8-PeCDF	U-MBL
SIB-SC-C09-5-6-08/19/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
SIB-SC-C08-1-2-08/19/2022	1,2,3,7,8-PeCDF	U-MBL
SIB-SC-C08-2-3-08/19/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
SIB-SC-C08-3-4-08/19/2022	1,2,3,7,8-PeCDF	U-MBL
SIB-SC-C08-5-6-08/19/2022	1,2,3,4,6,7,8-HpCDF	U-MBL

Field Blanks

Equipment rinsate blanks associated with sediment cores were submitted separately from the associated field samples. Based on review of the table of equipment blank associations, equipment blank EB08-08212022 is associated with the samples with results reported in this SDG; results for this EB were reported in CFA SDG 20283. EB08-08212022 was not evaluated as SDG 20283 was not submitted to EcoChem for review.

Matrix Spike/Matrix Spike Duplicate

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. When the MS/MSD %R values indicate a potential low bias, associated results are estimated (J/UJ-MSL). Only the associated positive results are estimated (J-MSH) if the %R values indicate a potential high bias. No qualifiers are assigned for %R value outliers if the parent concentration is greater than 4x the spike concentration. Precision is evaluated using the relative percent difference (RPD) values calculated between the MS and MSD results. Associated positive results are estimated (J-MSP) if the RPD values indicate uncertainty. Qualifiers are only issued to the parent sample.

The MS/MSD analyses were performed using Sample SIB-SC-C09-08/19/2022. The following qualifiers were assigned:

ANALYTE	MS %R	MSD %R	RPD	QUALIFIER
1,2,3,4,6,7,8-HpCDF	OK	-108	80.1	J-MSLX,MSP
1,2,3,4,6,7,8-HpCDD	Parent > 4x Spike Conc		131	J-MSP
1,2,3,6,7,8-HxCDD	OK	61.3	32.6	J-MSL,MSP

ANALYTE	MS %R	MSD %R	RPD	QUALIFIER
2,3,7,8-TCDF	OK	OK	23	J-MSP
OCDD	Parent > 4x Spike Conc		148	J-MSP
OCDF	10.3	-252	78.2	J-MSLX,MSP

Certified Reference Material

No certified reference materials were analyzed.

Field Duplicates

For sediment samples, the RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL.

One set of field duplicates, FD-44-08/19/2022 & SIB-SC-09-1-2-08/19/2022, was submitted. The precision for this set was not acceptable for most analytes, and the following qualifiers were assigned. Note that when the field duplicate sample is compared to Sample SIB-SC-09-2-3-08/19/2022, all RPD values are within control limits, indicating that the parent sample designation may be incorrect:

ANALYTE	OUTLIER TYPE	QUALIFIER
1,2,3,4,6,7,8-HpCDF	DIFFERENCE	J-FDPA
1,2,3,4,6,7,8-HpCDD	RPD	J-FDPR
1,2,3,4,7,8,9-HpCDF	DIFFERENCE	J-FDPA
1,2,3,4,7,8-HxCDF	DIFFERENCE	J-FDPA
1,2,3,6,7,8-HxCDD	DIFFERENCE	J-FDPA
1,2,3,7,8,9-HxCDD	DIFFERENCE	J-FDPA
2,3,7,8-TCDF	DIFFERENCE	J-FDPA
2,3,7,8-TCDD	DIFFERENCE	J/UJ-FDPA
OCDF	RPD	J-FDPR
OCDD	DIFFERENCE	J-FDPA
Total HpCDD	DIFFERENCE	J-FDPA
Total HxCDF	DIFFERENCE	J-FDPA
Total HxCDD	RPD	J-FDPR
Total PeCDF	DIFFERENCE	J-FDPA
Total PeCDD	DIFFERENCE	J-FDPA
Total TCDF	DIFFERENCE	J-FDPA
Total TCDD	DIFFERENCE	J/UJ-FDPA
Total HpCDF	RPD	J-FDPR

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF positive results when using the DB5 GC column for analysis. The DB5 column cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. Although the laboratory used a DB-5MS column which more adequately separates TCDF isomers, the laboratory still performed a second column confirmation on a DB-225 column when 2,3,7,8-TCDF was detected, and the concentration was greater than the reporting limit.

Both sets of results were reported. The 2,3,7,8-TCDF results from the DB-5MS column were qualified do-not-report (DNR-EXC) in favor of the results from the DB-225 column.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. These results were K-flagged by the laboratory. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were qualified (J-VJ).

Compound Quantitation

The laboratory flagged sample results with an "E" flag indicating the sample results exceeded the calibrated linear range of the instrument. These results were estimated (J-ACR).

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. With the exceptions noted above, accuracy was acceptable, as demonstrated by the LCS/LCSD, labeled compound, and MS/MSD recoveries. With the exceptions noted above, precision was also acceptable as indicated by the LCS/LCSD and MS/MSD RPD values.

Data were estimated to indicate that EMPC values are estimated maximum possible concentrations. Detection limits were elevated due to method blank contamination. Data were also estimated due to MS/MSD accuracy and precision outliers, field duplicate precision outliers, as well as calibration range exceedances.

Data were flagged as do-not-report (DNR) to indicate which result from multiple reported analyses should not be used. Data that have been flagged DNR should not be used for any purpose.

All other data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r ² below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

QC Element	Reason Code	Definition
Low-Level Calibration Check	LLCH	Low-level calibration check above the upper limit
Low-Level Calibration Check	LLCL	Low-level calibration check below the lower limit
Low-Level Calibration Check	LLXL	Low-level calibration check below the lower limit, extreme discrepancy
Method Blank	MBH	Method blank result \geq LOQ
Method Blank	MBHB	Result is judged to be biased high based on associated method blank result
Method Blank	MBL	Method blank result $<$ LOQ
Matrix Spike	MSH	MS and/or MSD %R above acceptance criterion
Matrix Spike	MSL	MS and/or MSD %R below acceptance criterion
Matrix Spike	MSLX	MS and/or MSD %R below acceptance criterion, extreme discrepancy
Matrix Spike	MSP	MS/MSD RPD above acceptance criterion
Post-Digestion Spike	PDH	Post-digestion spike recovery high
Post-Digestion Spike	PDL	Post-digestion spike recovery low
Post-Digestion Spike	PDLX	Post-digestion spike recovery low, extreme discrepancy
Post-Digestion Spike	PDN	Post-digestion spike not performed or not applicable and serial dilution result not performed or not applicable
Sample Delivery and Condition	BUB	Bubbles $>$ 5 millimeters in volatile organic compounds vial
Sample Delivery and Condition	DAM	Sample container damaged
Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of compliance review (EPA Stage 2A) performed on sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Dioxins/Furans	E1613B	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, November 2020).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

Dioxin/Furan Compounds by EPA 1613B

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory and field quality control (QC) samples. All data received a compliance screening level of review (EPA Stage 2A). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES AND MATRIX	VALIDATION LEVEL
20430	18 Sediment	Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

For 1 sample, the date suffix in the sample ID is expressed as DDMMYYYY instead of DD/MM/YYYY in the "sample_name" field. For 17 samples, the "sample_name" field is not populated. All sample IDs in the "sys_sample_code" field match the chain-of-custody.

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table.

✓	Sample Receipt, Preservation, and Holding Times	1	Certified Reference Material
2	Laboratory Blanks	2	Field Duplicates
1	Field Blanks	✓	Target Analyte List
✓	Labeled Compound Recovery	✓	Reporting Limits
2	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	2	Compound Identification
✓	Laboratory Control Samples (LCS/LCSD)	2	Compound Quantitation

✓ Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned K-flags to values when a peak was detected but did not meet identification criteria. These values are considered positive identifications which are "estimated maximum possible concentrations" or EMPC. When these occurred in the method blank the results were evaluated as positive results. When these occurred in the associated samples, any EMPC values that were less than the method blank action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. Various target analytes were detected in the method blanks, however only the following analytes required qualification in one or more samples and results were qualified as not detected:

CLIENT ID	ANALYTE	QUALIFIER
SIB-SC-I03-0-1-08/19/2022	1,2,3,7,8-PENTACHLORODIBENZOFURAN	U-MBL
SIB-SC-I03-1-2-08/19/2022	1,2,3,4,7,8-HEXACHLORODIBENZOFURAN	U-MBL
SIB-SC-I03-2-3-08/19/2022	1,2,3,4,7,8-HEXACHLORODIBENZOFURAN	U-MBL
SIB-SC-I03-3-4-08/19/2022	1,2,3,4,6,7,8-HEPTACHLORODIBENZOFURAN	U-MBL
SIB-SC-I03-4-5-08/19/2022	1,2,3,4,6,7,8-HEPTACHLORODIBENZOFURAN	U-MBL
SIB-SC-I03-5-6-08/19/2022	1,2,3,4,6,7,8-HEPTACHLORODIBENZOFURAN	U-MBL
FD-46-08/19/2022	1,2,3,4,7,8-HEXACHLORODIBENZOFURAN	U-MBL
SIB-SC-J03-3-4-08/19/2022	1,2,3,4,7,8-HEXACHLORODIBENZOFURAN	U-MBL
	1,2,3,7,8-PENTACHLORODIBENZOFURAN	U-MBL
SIB-SC-J03-4-5-08/19/2022	1,2,3,7,8-PENTACHLORODIBENZOFURAN	U-MBL
SIB-SC-J03-5-6-08/19/2022	1,2,3,4,7,8-HEXACHLORODIBENZOFURAN	U-MBL
	1,2,3,7,8-PENTACHLORODIBENZOFURAN	U-MBL
SIB-SC-K01-1-2-08/20/2022	1,2,3,7,8-PENTACHLORODIBENZOFURAN	U-MBL
SIB-SC-K01-3-4-08/20/2022	1,2,3,4,7,8-HEXACHLORODIBENZOFURAN	U-MBL
	1,2,3,7,8-PENTACHLORODIBENZOFURAN	U-MBL
SIB-SC-K01-5-5.7-08/20/2022	1,2,3,4,7,8-HEXACHLORODIBENZOFURAN	U-MBL

Field Blanks

Equipment rinsate blanks associated with sediment cores were submitted separately from the associated field samples. Based on review of the table of equipment blank associations, equipment blank EB08-08212022 is associated with the samples with results reported in this SDG; results for this EB were reported in CFA SDG 20283. EB08-08212022 was not evaluated as SDG 20283 was not submitted to EcoChem for review.

Matrix Spike/Matrix Spike Duplicate

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. When the MS/MSD %R values indicate a potential low bias, associated results are estimated (J/UJ-MSL). Only the associated positive results are estimated (J-MSH) if the %R values indicate a potential high bias. No qualifiers are assigned for %R value outliers if the parent concentration is greater than 4x the spike concentration. Precision is evaluated using the relative percent difference (RPD) values calculated between the MS and MSD results. Associated positive results are estimated (J-MSP) if the RPD values indicate uncertainty. Qualifiers are only issued to the parent sample.

The MS/MSD analyses were performed using Sample SIB-SC-I03-3-4-08/19/2022. The following qualifiers were assigned:

ANALYTE	MS %R	MSD %R	RPD	QUALIFIER
OCDD	170	160	OK	J-MSH

Certified Reference Material

No certified reference materials were analyzed.

Field Duplicates

For sediment samples, the RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL.

One set of field duplicates, SIB-SC-I03-3-4-08/19/2022 & FD-46-08/19/2022, was submitted. The following qualifiers were assigned:

ANALYTE	OUTLIER TYPE	QUALIFIER
OCDD	DIFFERENCE	J-FDPA
Total HpCDD	DIFFERENCE	J-FDPA
Total HpCDF	DIFFERENCE	J-FDPA

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF positive results when using the DB5 GC column for analysis. The DB5 column cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. Although the laboratory used a DB-5MS column which more adequately separates TCDF isomers, the laboratory still performed a second column confirmation on a DB-225 column when 2,3,7,8-TCDF was detected, and the concentration was greater than the reporting limit. Both sets of results were reported. The 2,3,7,8-TCDF results from the DB-5MS column were qualified do-not-report (DNR-EXC) in favor of the results from the DB-225 column.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. These results were K-flagged by the laboratory. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated

positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were qualified (J-VJ).

Compound Quantitation

The laboratory flagged sample results with an "E" flag indicating the sample results exceeded the calibrated linear range of the instrument. These results were estimated (J-ACR).

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. With the exceptions noted above, accuracy was acceptable, as demonstrated by the LCS/LCSD, labeled compound, and MS/MSD recoveries. With the exceptions noted above, precision was also acceptable as indicated by the LCS/LCSD, MS/MSD and field duplicate RPDs.

Data were estimated to indicate that EMPC values are estimated maximum possible concentrations. Detection limits were elevated due to method blank contamination. Data were also estimated due to MS/MSD accuracy outliers, field duplicate precision outliers, as well as calibration range exceedances.

Data were flagged as do-not-report (DNR) to indicate which result from multiple reported analyses should not be used. Data that have been flagged DNR should not be used for any purpose.

All other data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r ² below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

QC Element	Reason Code	Definition
Low-Level Calibration Check	LLCH	Low-level calibration check above the upper limit
Low-Level Calibration Check	LLCL	Low-level calibration check below the lower limit
Low-Level Calibration Check	LLXL	Low-level calibration check below the lower limit, extreme discrepancy
Method Blank	MBH	Method blank result \geq LOQ
Method Blank	MBHB	Result is judged to be biased high based on associated method blank result
Method Blank	MBL	Method blank result $<$ LOQ
Matrix Spike	MSH	MS and/or MSD %R above acceptance criterion
Matrix Spike	MSL	MS and/or MSD %R below acceptance criterion
Matrix Spike	MSLX	MS and/or MSD %R below acceptance criterion, extreme discrepancy
Matrix Spike	MSP	MS/MSD RPD above acceptance criterion
Post-Digestion Spike	PDH	Post-digestion spike recovery high
Post-Digestion Spike	PDL	Post-digestion spike recovery low
Post-Digestion Spike	PDLX	Post-digestion spike recovery low, extreme discrepancy
Post-Digestion Spike	PDN	Post-digestion spike not performed or not applicable and serial dilution result not performed or not applicable
Sample Delivery and Condition	BUB	Bubbles $>$ 5 millimeters in volatile organic compounds vial
Sample Delivery and Condition	DAM	Sample container damaged
Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor

DATA VALIDATION REPORT

HGL – SWAN ISLAND BASIN

Prepared for:

HydroGeoLogic, Inc
11107 Sunset Hills Rd. Suite 400
Reston, VA 20190

Prepared by:

EcoChem, Inc.
500 Union Street, Suite 1010
Seattle, WA 98101

EcoChem Project: C28601-1

SDG: 20431

May 25, 2023

Approved for Release:

A handwritten signature in black ink, appearing to read "Michela Hernandez". The signature is written in a cursive style and is positioned above a horizontal line.

Michela Hernandez
Senior Project Chemist
EcoChem, Inc.

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of compliance review (EPA Stage 2A) performed on sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Dioxins/Furans	E1613B	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, November 2020).

EcoChem’s goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

Dioxin/Furan Compounds by EPA 1613B

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory and field quality control (QC) samples. All data received a compliance screening level of review (EPA Stage 2A). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES AND MATRIX	VALIDATION LEVEL
20431	21 Sediment	Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

For 10 samples, the date suffix in the sample ID is expressed as DDMMYYYY instead of DD/MM/YYYY in the "sample_name" field. For 9 samples, the "sample_name" field is not populated. All sample IDs in the "sys_sample_code" field match the chain-of-custody.

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table.

✓	Sample Receipt, Preservation, and Holding Times	1	Certified Reference Material
2	Laboratory Blanks	2	Field Duplicates
1	Field Blanks	✓	Target Analyte List
✓	Labeled Compound Recovery	✓	Reporting Limits
✓	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	2	Compound Identification
✓	Laboratory Control Samples (LCS/LCSD)	2	Compound Quantitation

✓ Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned K-flags to values when a peak was detected but did not meet identification criteria. These values are considered positive identifications which are "estimated maximum possible concentrations" or EMPC. When these occurred in the method blank the results were evaluated as positive results. When these occurred in the associated samples, any EMPC values that were less than the method blank action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. Various target analytes were detected in the method blanks, however only the following analytes required qualification in one or more samples and results were qualified as not detected:

CLIENT ID	ANALYTE	QUALIFIER	BATCH
SIB-SC-L09-1-2-08/21/2022	1,2,3,4,6,7,8-HpCDF	U-MBL	51405

SIB-SC-K07-3-4-08/21/2022	1,2,3,6,7,8-HxCDF	U-MBL	51410
SIB-SC-K07-4-5-08/21/2022	1,2,3,6,7,8-HxCDF	U-MBL	51410
SIB-SC-K07-5-6-08/21/2022	1,2,3,4,6,7,8-HpCDF	U-MBL	51410

Field Blanks

Equipment rinsate blanks associated with sediment cores were submitted separately from the associated field samples. Based on review of the table of equipment blank associations, equipment blank EB08-08212022 is associated with the samples with results reported in this SDG; results for this EB were reported in CFA SDG 20283. EB08-08212022 was not evaluated as SDG 20283 was not submitted to EcoChem for review.

Certified Reference Material

No certified reference materials were analyzed.

Field Duplicates

For sediment samples, the RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL.

One set of field duplicates, SIB-SC-L07-1-2-08/21/2022 & FD-49-08/21/2022, was submitted. The following qualifiers were assigned:

ANALYTE	OUTLIER TYPE	QUALIFIER
1,2,3,4,6,7,8-HpCDD	DIFFERENCE	J-FDPA
OCDD	RPD	J-FDPR
Total HpCDD	RPD	J-FDPR
Total HpCDF	DIFFERENCE	J-FDPA

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF positive results when using the DB5 GC column for analysis. The DB5 column cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. Although the laboratory used a DB-5MS column which more adequately separates TCDF isomers, the laboratory still performed a second column confirmation on a DB-225 column when 2,3,7,8-TCDF was detected, and the concentration was greater than the reporting limit. Both sets of results were reported. The 2,3,7,8-TCDF results from the DB-5MS column were qualified do-not-report (DNR-EXC) in favor of the results from the DB-225 column.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. These results were K-flagged by the laboratory. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were qualified (J-VJ).

Compound Quantitation

The laboratory flagged sample results with an "E" flag indicating the sample results exceeded the calibrated linear range of the instrument. These results were estimated (J-ACR).

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. With the exceptions noted above, accuracy was acceptable, as demonstrated by the LCS/LCSD, labeled compound, and MS/MSD recoveries. With the exceptions noted above, precision was also acceptable as indicated by the LCS/LCSD, MS/MSD and field duplicate RPD values.

Data were estimated to indicate that EMPC values are estimated maximum possible concentrations. Detection limits were elevated due to method blank contamination. Data were also estimated due to field duplicate precision outliers as well as calibration range exceedances.

Data were flagged as do-not-report (DNR) to indicate which result from multiple reported analyses should not be used. Data that have been flagged DNR should not be used for any purpose.

All other data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r ² below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

QC Element	Reason Code	Definition
Low-Level Calibration Check	LLCH	Low-level calibration check above the upper limit
Low-Level Calibration Check	LLCL	Low-level calibration check below the lower limit
Low-Level Calibration Check	LLXL	Low-level calibration check below the lower limit, extreme discrepancy
Method Blank	MBH	Method blank result \geq LOQ
Method Blank	MBHB	Result is judged to be biased high based on associated method blank result
Method Blank	MBL	Method blank result $<$ LOQ
Matrix Spike	MSH	MS and/or MSD %R above acceptance criterion
Matrix Spike	MSL	MS and/or MSD %R below acceptance criterion
Matrix Spike	MSLX	MS and/or MSD %R below acceptance criterion, extreme discrepancy
Matrix Spike	MSP	MS/MSD RPD above acceptance criterion
Post-Digestion Spike	PDH	Post-digestion spike recovery high
Post-Digestion Spike	PDL	Post-digestion spike recovery low
Post-Digestion Spike	PDLX	Post-digestion spike recovery low, extreme discrepancy
Post-Digestion Spike	PDN	Post-digestion spike not performed or not applicable and serial dilution result not performed or not applicable
Sample Delivery and Condition	BUB	Bubbles $>$ 5 millimeters in volatile organic compounds vial
Sample Delivery and Condition	DAM	Sample container damaged
Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor

DATA VALIDATION REPORT

HGL – SWAN ISLAND BASIN

Prepared for:

HydroGeoLogic, Inc
11107 Sunset Hills Rd. Suite 400
Reston, VA 20190

Prepared by:

EcoChem, Inc.
500 Union Street, Suite 1010
Seattle, WA 98101

EcoChem Project: C28601-1

SDG: 20432

May 25, 2023

Approved for Release:

A handwritten signature in black ink, appearing to read "Michela Hernandez". The signature is written in a cursive style and is positioned above a horizontal line.

Michela Hernandez
Senior Project Chemist
EcoChem, Inc.

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of compliance review (EPA Stage 2A) performed on sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Dioxins/Furans	E1613B	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, November 2020).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

Dioxin/Furan Compounds by EPA 1613B

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory quality control (QC) samples. All data received a compliance screening level of review (EPA Stage 2A). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES AND MATRIX	VALIDATION LEVEL
20432	20 Sediment	Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

For 19 samples, the date suffix in the sample ID is expressed as DDMMYYYY instead of DD/MM/YYYY in the "sample_name" field. All sample IDs in the "sys_sample_code" field match the chain-of-custody.

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table.

✓	Sample Receipt, Preservation, and Holding Times	1	Certified Reference Material
1	Laboratory Blanks	1	Field Duplicates
1	Field Blanks	✓	Target Analyte List
✓	Labeled Compound Recovery	✓	Reporting Limits
✓	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	2	Compound Identification
✓	Laboratory Control Samples (LCS/LCSD)	2	Compound Quantitation

✓ Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned K-flags to values when a peak was detected but did not meet identification criteria. These values are considered positive identifications which are "estimated maximum possible concentrations" or EMPC. When these occurred in the method blank the results were evaluated as positive results. When these occurred in the associated samples, any EMPC values that were less than the method blank action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. OCDD was detected in the method blank; however, all sample results were greater than the action level; no qualifiers were assigned.

Field Blanks

Equipment rinsate blanks associated with sediment cores were submitted separately from the associated field samples. Based on review of the table of equipment blank associations, equipment blanks EB08-08212022 and EB09-08242022 are associated with the samples with results reported in this SDG; results for these EB were reported in CFA SDG 20283. EB08-08212022 and EB09-08242022 were not evaluated as SDG 20283 was not submitted to EcoChem for review.

Certified Reference Material

No certified reference materials were analyzed.

Field Duplicates

No field duplicates were submitted with this SDG.

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF positive results when using the DB5 GC column for analysis. The DB5 column cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. Although the laboratory used a DB-5MS column which more adequately separates TCDF isomers, the laboratory still performed a second column confirmation on a DB-225 column when 2,3,7,8-TCDF was detected, and the concentration was greater than the reporting limit. Both sets of results were reported. The 2,3,7,8-TCDF results from the DB-5MS column were qualified do-not-report (DNR-EXC) in favor of the results from the DB-225 column.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. These results were K-flagged by the laboratory. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were qualified (J-VJ).

Compound Quantitation

The laboratory flagged sample results with an "E" flag indicating the sample results exceeded the calibrated linear range of the instrument. These results were estimated (J-ACR).

The laboratory P-flagged several results to indicate interference from diphenyl ether. These results were estimated (J-VJ).

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. With the exceptions noted above, accuracy was acceptable, as demonstrated by the LCS/LCSD, labeled compound, and MS/MSD recoveries. Precision was also acceptable as indicated by the LCS/LCSD and MS/MSD RPD values.

Data were estimated to indicate that EMPC values are estimated maximum possible concentrations. Data were also estimated due to calibration range exceedances and diphenyl ether interferences.

Data were flagged as do-not-report (DNR) to indicate which result from multiple reported analyses should not be used. Data that have been flagged DNR should not be used for any purpose.

All other data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r ² below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

QC Element	Reason Code	Definition
Low-Level Calibration Check	LLCH	Low-level calibration check above the upper limit
Low-Level Calibration Check	LLCL	Low-level calibration check below the lower limit
Low-Level Calibration Check	LLXL	Low-level calibration check below the lower limit, extreme discrepancy
Method Blank	MBH	Method blank result \geq LOQ
Method Blank	MBHB	Result is judged to be biased high based on associated method blank result
Method Blank	MBL	Method blank result $<$ LOQ
Matrix Spike	MSH	MS and/or MSD %R above acceptance criterion
Matrix Spike	MSL	MS and/or MSD %R below acceptance criterion
Matrix Spike	MSLX	MS and/or MSD %R below acceptance criterion, extreme discrepancy
Matrix Spike	MSP	MS/MSD RPD above acceptance criterion
Post-Digestion Spike	PDH	Post-digestion spike recovery high
Post-Digestion Spike	PDL	Post-digestion spike recovery low
Post-Digestion Spike	PDLX	Post-digestion spike recovery low, extreme discrepancy
Post-Digestion Spike	PDN	Post-digestion spike not performed or not applicable and serial dilution result not performed or not applicable
Sample Delivery and Condition	BUB	Bubbles $>$ 5 millimeters in volatile organic compounds vial
Sample Delivery and Condition	DAM	Sample container damaged
Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of compliance review (EPA Stage 2A) performed on sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Dioxins/Furans	E1613B	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, November 2022).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

Dioxin/Furan Compounds by EPA 1613B

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory and field quality control (QC) samples. All data received a compliance screening level of review (EPA Stage 2A). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES AND MATRIX	VALIDATION LEVEL
20433	17 Sediment	Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

For fourteen samples, the date suffix in the sample ID is expressed as DDMMYYYY instead of DD/MM/YYYY in the "sample_name" field. For 1 sample, the "sample_name" field is not populated. All sample IDs in the "sys_sample_code" field match the chain-of-custody.

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table.

✓	Sample Receipt, Preservation, and Holding Times	1	Certified Reference Material
2	Laboratory Blanks	2	Field Duplicates
1	Field Blanks	✓	Target Analyte List
✓	Labeled Compound Recovery	✓	Reporting Limits
2	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	2	Compound Identification
✓	Laboratory Control Samples (LCS/LCSD)	2	Compound Quantitation

✓ Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned K-flags to values when a peak was detected but did not meet identification criteria. These values are considered positive identifications which are "estimated maximum possible concentrations" or EMPC. When these occurred in the method blank the results were evaluated as positive results. When these occurred in the associated samples, any EMPC values that were less than the method blank action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. The following field sample results were qualified as not detected:

CLIENT ID	ANALYTE	QUALIFIER
FD-50-08/22/2022	2,3,4,7,8-PeCDF	U-MBL
SIB-SC-M05-2-3-08/22/2022	2,3,4,7,8-PeCDF	U-MBL
SIB-SC-M04-0-1-08/23/2022	2,3,4,7,8-PeCDF	U-MBL
SIB-SC-M04-2-3-08/23/2022	2,3,4,7,8-PeCDF	U-MBL
SIB-SC-N07-0-1-08/24/2022	2,3,4,7,8-PeCDF	U-MBL
SIB-SC-N07-1-2-08/24/2022	2,3,4,7,8-PeCDF	U-MBL

Field Blanks

No field blank samples were submitted with this SDG.

Matrix Spike/Matrix Spike Duplicate

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. When the MS/MSD %R values indicate a potential low bias, associated results are estimated (J/UJ-MSL). Only the associated positive results are estimated (J-MSH) if the %R values indicate a potential high bias. No qualifiers are assigned for %R value outliers if the parent concentration is greater than 4x the spike concentration. Precision is evaluated using the relative percent difference (RPD) values calculated between the MS and MSD results. Associated positive results are estimated (J-MSP) if the RPD values indicate uncertainty. Qualifiers are only issued to the parent sample.

The MS/MSD analyses were performed using Sample FD-50-08/22/2022 The following qualifiers were assigned:

ANALYTE	MS %R	MSD %R	RPD	QUALIFIER
OCDD	705	682	OK	J-MSH
1,2,3,4,6,7,8-HpCDD	206	211	OK	J-MSH

Certified Reference Material

Puget Sound Sediment Reference Material was analyzed with this SDG. For 1,2,3,7,8,9-HxCDF, the true value was less than the practical quantitation limit (PQL), and the lower control limit was less than the estimated detection limit (EDL). This analyte was reported as not detected at the EDL. This analyte was judged as within acceptance limits after a review of the raw data. All acceptance criteria were met.

Field Duplicates

For sediment samples, the RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL.

One set of field replicates SIB-SC-R02-2-3-08/22/2022 & FD-50-08/22/2022, were submitted. The parent sample was reported in SDG 20432. The following qualifiers were assigned:

ANALYTE	OUTLIER TYPE	QUALIFIER
1,2,3,4,6,7,8-HpCDF	DIFFERENCE	J-FDPA
1,2,3,4,6,7,8-HpCDD	RPD	J-FDPR
OCDF	DIFFERENCE	J-FDPA
OCDD	RPD	J-FDPR
Total HpCDF	RPD	J-FDPR
Total HpCDD	RPD	J-FDPR
Total HxCDF	DIFFERENCE	J-FDPA
Total HxCDD	DIFFERENCE	J-FDPA
Total TCDF	RPD	J-FDPR

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF positive results when using the DB5 GC column for analysis. The DB5 column cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. Although the laboratory used a DB-5MS column which more adequately separates TCDF isomers, the laboratory still performed a second column confirmation on a DB-225 column when 2,3,7,8-TCDF was detected, and the concentration was greater than the reporting limit. Both sets of results were reported. The 2,3,7,8-TCDF results from the DB-5MS column were qualified do-not-report (DNR-EXC) in favor of the results from the DB-225 column.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. These results were K-flagged by the laboratory. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were qualified (J-VJ).

Compound Quantitation

The laboratory flagged sample results with an "E" flag indicating the sample results exceeded the calibrated linear range of the instrument. These results were estimated (J-ACR).

The laboratory P-flagged several results to indicate interference from diphenyl ether. These results were estimated (J-VJ).

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. With the exceptions noted above, accuracy was acceptable as demonstrated by the LCS/LCSD, labeled compound, SRM, and MS/MSD recoveries. With the exceptions noted above, precision was also acceptable as indicated by the LCS/LCSD, MS/MSD and field duplicate RPDs.

Data were estimated to indicate that EMPC values are estimated maximum possible concentrations. Detection limits were elevated due to method blank contamination. Data were also estimated due to MS/MSD accuracy outliers, field duplicate precision outliers, diphenyl ether interferences, as well as calibration range exceedances.

Data were flagged as do-not-report (DNR) to indicate which result from multiple reported analyses should not be used. Data that have been flagged DNR should not be used for any purpose.

All other data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r^2 below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

QC Element	Reason Code	Definition
Low-Level Calibration Check	LLCH	Low-level calibration check above the upper limit
Low-Level Calibration Check	LLCL	Low-level calibration check below the lower limit
Low-Level Calibration Check	LLXL	Low-level calibration check below the lower limit, extreme discrepancy
Method Blank	MBH	Method blank result \geq LOQ
Method Blank	MBHB	Result is judged to be biased high based on associated method blank result
Method Blank	MBL	Method blank result $<$ LOQ
Matrix Spike	MSH	MS and/or MSD %R above acceptance criterion
Matrix Spike	MSL	MS and/or MSD %R below acceptance criterion
Matrix Spike	MSLX	MS and/or MSD %R below acceptance criterion, extreme discrepancy
Matrix Spike	MSP	MS/MSD RPD above acceptance criterion
Post-Digestion Spike	PDH	Post-digestion spike recovery high
Post-Digestion Spike	PDL	Post-digestion spike recovery low
Post-Digestion Spike	PDLX	Post-digestion spike recovery low, extreme discrepancy
Post-Digestion Spike	PDN	Post-digestion spike not performed or not applicable and serial dilution result not performed or not applicable
Sample Delivery and Condition	BUB	Bubbles $>$ 5 millimeters in volatile organic compounds vial
Sample Delivery and Condition	DAM	Sample container damaged
Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of full review (EPA Stage 4) performed on sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Dioxins/Furans	E1613B	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, November 2020).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

Dioxin/Furan Compounds by EPA 1613B

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory quality control (QC) samples. All data received a full level of review (EPA Stage 4). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES AND MATRIX	VALIDATION LEVEL
20434	24 Sediment	Stage 4

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

For all samples, the date suffix in the sample ID is expressed as DDMMYYYY instead of DD/MM/YYYY in the "sample_name" field. All sample IDs in the "sys_sample_code" field match the chain-of-custody.

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table.

✓	Sample Receipt, Preservation, and Holding Times	✓	Laboratory Control Samples (LCS/LCSD)
✓	System Performance and Resolution Checks	1	Certified Reference Material
✓	Initial Calibration (ICAL)	1	Field Duplicates
✓	Calibration Verification (CCAL)	✓	Target Analyte List
2	Laboratory Blanks	✓	Reporting Limits
1	Field Blanks	2	Compound Identification
✓	Labeled Compound Recovery	2	Compound Quantitation
2	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	1	Calculation Verification

✓ Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned K-flags to values when a peak was detected but did not meet identification criteria. These values are considered positive identifications which are "estimated maximum possible concentrations" or EMPC. When these occurred in the method blank the results were evaluated as positive results. When these occurred in the associated samples, any EMPC values that were less than the method blank action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. Various target analytes were detected in the method blanks, however only the following analytes required qualification:

There was a positive result for 1,2,3,4,6,7,8-HpCDF for the method blank from batch 51432. Positive results for this analyte in Samples SIB-SC-N05-5-6-09/01/2022 and SIB-SC-N05-4-5-09012022 were qualified as not detected (U-MBL).

Field Blanks

Equipment rinsate blanks associated with sediment cores were submitted separately from the associated field samples. Based on review of the table of equipment blank associations, equipment blank EB09-08242022 is associated with the samples with results reported in this SDG; results for this EB were reported in CFA SDG 20283. EB09-08242022 was not evaluated as SDG 20283 was not submitted to EcoChem for review.

Equipment blank EB10-09052022 is associated with the samples with results reported in this SDG; results for this EB were reported in CFA SDG 20342. EB10-09052022 was free from all contamination.

Matrix Spike/Matrix Spike Duplicate

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. When the MS/MSD %R values indicate a potential low bias, associated results are estimated (J/UJ-MSL). Only the associated positive results are estimated (J-MSH) if the %R values indicate a potential high bias. No qualifiers are assigned for %R value outliers if the parent concentration is greater than 4x the spike concentration. Precision is evaluated using the relative percent difference (RPD) values calculated between the MS and MSD results. Associated positive results are estimated (J-MSP) if the RPD values indicate uncertainty. Qualifiers are only issued to the parent sample.

For Extraction Batch 51429, the MS/MSD analyses were performed using Sample SIB-SC-N00-1-2-08/25/2022. The following qualifiers were assigned:

ANALYTE	MS %R	MSD %R	RPD	QUALIFIER
OCDD	537	415	20.6	J-MSH, MSP
1,2,3,4,6,7,8-HpCDD	197	169	OK	J-MSH

Certified Reference Material

No certified reference materials were analyzed.

Field Duplicates

No field duplicates were submitted with this SDG.

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF positive results when using the DB5 GC column for analysis. The DB5 column cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. Although the laboratory used a DB-5MS column which more adequately separates TCDF isomers, the laboratory still performed a second column confirmation on a DB-225 column when 2,3,7,8-TCDF was detected, and the concentration was greater than the reporting limit. Both sets of results were reported. The 2,3,7,8-TCDF results from the DB-5MS column were qualified do-not-report (DNR-EXC) in favor of the results from the DB-225 column.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. These results were K-flagged by the laboratory. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were qualified (J-VJ).

Calculation Verification

Calculation verifications were performed for this sample delivery group (SDG). No calculation or transcription errors were found.

Compound Quantitation

The laboratory flagged sample results with an "E" flag indicating the sample results exceeded the calibrated linear range of the instrument. These results were estimated (J-ACR).

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. With the exception noted above, accuracy was acceptable, as demonstrated by the labeled compound, LCS/LCSD, and MS/MSD recoveries. With the exception noted above, precision was also acceptable as indicated by the LCS/LCSD and MS/MSD.

Data were qualified as not detected due to method blank contamination. Data were estimated to indicate that EMPC values are estimated maximum possible concentrations. Data were also estimated due to MS/MSD precision and accuracy outliers.

Data were flagged as do-not-report (DNR) to indicate which result from multiple analyses should not be used. Data that have been flagged DNR should not be used for any purpose.

All other data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r ² below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

QC Element	Reason Code	Definition
Low-Level Calibration Check	LLCH	Low-level calibration check above the upper limit
Low-Level Calibration Check	LLCL	Low-level calibration check below the lower limit
Low-Level Calibration Check	LLXL	Low-level calibration check below the lower limit, extreme discrepancy
Method Blank	MBH	Method blank result \geq LOQ
Method Blank	MBHB	Result is judged to be biased high based on associated method blank result
Method Blank	MBL	Method blank result $<$ LOQ
Matrix Spike	MSH	MS and/or MSD %R above acceptance criterion
Matrix Spike	MSL	MS and/or MSD %R below acceptance criterion
Matrix Spike	MSLX	MS and/or MSD %R below acceptance criterion, extreme discrepancy
Matrix Spike	MSP	MS/MSD RPD above acceptance criterion
Post-Digestion Spike	PDH	Post-digestion spike recovery high
Post-Digestion Spike	PDL	Post-digestion spike recovery low
Post-Digestion Spike	PDLX	Post-digestion spike recovery low, extreme discrepancy
Post-Digestion Spike	PDN	Post-digestion spike not performed or not applicable and serial dilution result not performed or not applicable
Sample Delivery and Condition	BUB	Bubbles $>$ 5 millimeters in volatile organic compounds vial
Sample Delivery and Condition	DAM	Sample container damaged
Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of compliance review (EPA Stage 2A) performed on sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Dioxins/Furans	E1613B	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, November 2020).

EcoChem’s goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

Dioxin/Furan Compounds by EPA 1613B

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory and field quality control (QC) samples. All data received a compliance screening level of review (EPA Stage 2A). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES AND MATRIX	VALIDATION LEVEL
20435	20 Sediment	Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

For 18 samples, the date suffix in the sample ID is expressed as DDMMYYYY instead of DD/MM/YYYY in the "sample_name" field. All sample IDs in the "sys_sample_code" field match the chain-of-custody.

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table.

✓	Sample Receipt, Preservation, and Holding Times	1	Certified Reference Material
2	Laboratory Blanks	1	Field Duplicates
1	Field Blanks	✓	Target Analyte List
✓	Labeled Compound Recovery	✓	Reporting Limits
2	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	2	Compound Identification
✓	Laboratory Control Samples (LCS/LCSD)	2	Compound Quantitation

✓ Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

Sample SC-D02-5-6-09/03/2022 has incorrect sampling date as 9/2/22 on the chain-of-custody (COC).

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned K-flags to values when a peak was detected but did not meet identification criteria. These values are considered positive identifications which are "estimated maximum possible concentrations" or EMPC. When these occurred in the method blank the results were evaluated as positive results. When these occurred in the associated samples, any EMPC values that were less than the method blank action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. The following field sample results were qualified as not detected:

CLIENT ID	ANALYTE	QUALIFIER
SIB-SC-G01-5-6-09/02/2022	1,2,3,4,6,7,8-HpCDD	U-MBL
SIB-SC-D02-2-3-09/03/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
SIB-SC-D02-3-4-09/03/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
	1,2,3,4,6,7,8-HpCDD	U-MBL
SIB-SC-D02-4-5-09/03/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
	1,2,3,4,6,7,8-HpCDD	U-MBL
SIB-SC-D02-5-6-09/03/2022	1,2,3,4,6,7,8-HpCDF	U-MBL

Field Blanks

Equipment rinse blanks associated with sediment cores were submitted separately from the associated field samples. Based on review of the table of equipment blank associations, equipment blank EB10-09052022 is associated with the samples with results reported in this SDG; results for this EB were reported in CFA SDG 20342. EB10-09052022 was free from all contamination.

Matrix Spike/Matrix Spike Duplicate

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. When the MS/MSD %R values indicate a potential low bias, associated results are estimated (J/UJ-MSL). Only the associated positive results are estimated (J-MSH) if the %R values indicate a potential high bias. No qualifiers are assigned for %R value outliers if the parent concentration is greater than 4x the spike concentration. Precision is evaluated using the relative percent difference (RPD) values calculated between the MS and MSD results. Associated positive results are estimated (J-MSP) if the RPD values indicate uncertainty. Qualifiers are only issued to the parent sample.

The MS/MSD analyses were performed using Sample SIB-SC-G01-2-3-09/02/2022. The following qualifiers were assigned:

ANALYTE	MS %R	MSD %R	RPD	QUALIFIER
1,2,3,4,6,7,8-HpCDD	OK	59	26.9	J-MSL,MSP
OCDD	Parent > 4x Spike Conc		40.6	J-MSP
1,2,3,4,6,7,8-HpCDF	Parent > 4x Spike Conc		28.9	J-MSP
OCDF	OK	44.2	36.3	J-MSL,MSP

Certified Reference Material

No SRM/CRM was submitted with this SDG.

Field Duplicates

For sediment samples, the RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL.

One set of field replicates SIB-SC-G01-1-2-09/02/2022 & FD-53-09/02/2022, was submitted. Field precision was acceptable.

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF positive results when using the DB5 GC column for analysis. The DB5 column cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. Although the laboratory used a DB-5MS column which more adequately separates TCDF isomers, the laboratory still performed a second column confirmation on a DB-225 column when 2,3,7,8-TCDF was detected, and the concentration was greater than the reporting limit. Both sets of results were reported. The 2,3,7,8-TCDF results from the DB-5MS column were qualified do-not-report (DNR-EXC) in favor of the results from the DB-225 column.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. These results were K-flagged by the laboratory. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were qualified (J-VJ).

Compound Quantitation

The laboratory flagged sample results with an "E" flag indicating the sample results exceeded the calibrated linear range of the instrument. These results were estimated (J-ACR).

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. With the exceptions noted above, accuracy was acceptable, as demonstrated by the LCS/LCSD, labeled compound, and MS/MSD recoveries. With the exceptions noted above, precision was also acceptable as indicated by the LCS/LCSD, MS/MSD and field duplicate RPD values.

Data were estimated to indicate that EMPC values are estimated maximum possible concentrations. Detection limits were elevated due to method blank contamination. Data were also estimated due to MS/MSD accuracy and precision outliers as well as calibration range exceedances.

Data were flagged as do-not-report (DNR) to indicate which result from multiple reported analyses should not be used. Data that have been flagged DNR should not be used for any purpose.

All other data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r ² below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

QC Element	Reason Code	Definition
Low-Level Calibration Check	LLCH	Low-level calibration check above the upper limit
Low-Level Calibration Check	LLCL	Low-level calibration check below the lower limit
Low-Level Calibration Check	LLXL	Low-level calibration check below the lower limit, extreme discrepancy
Method Blank	MBH	Method blank result \geq LOQ
Method Blank	MBHB	Result is judged to be biased high based on associated method blank result
Method Blank	MBL	Method blank result $<$ LOQ
Matrix Spike	MSH	MS and/or MSD %R above acceptance criterion
Matrix Spike	MSL	MS and/or MSD %R below acceptance criterion
Matrix Spike	MSLX	MS and/or MSD %R below acceptance criterion, extreme discrepancy
Matrix Spike	MSP	MS/MSD RPD above acceptance criterion
Post-Digestion Spike	PDH	Post-digestion spike recovery high
Post-Digestion Spike	PDL	Post-digestion spike recovery low
Post-Digestion Spike	PDLX	Post-digestion spike recovery low, extreme discrepancy
Post-Digestion Spike	PDN	Post-digestion spike not performed or not applicable and serial dilution result not performed or not applicable
Sample Delivery and Condition	BUB	Bubbles $>$ 5 millimeters in volatile organic compounds vial
Sample Delivery and Condition	DAM	Sample container damaged
Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor

The following Stage 2A review was performed on the requested analyses. No results were rejected, and analytical completeness is 100%.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No completeness issues were noted.

Qualification: None required.

Sample Delivery and Condition – With the exception of several labeling discrepancies, which were resolved, all samples arrived intact at the laboratory in acceptable condition and temperature and were properly preserved. No other discrepancies were noted.

Qualification: None required.

Holding Times – All samples were prepared and analyzed within their required holding times.

Qualification: None required.

Method Blanks – The method 1613B method bank was contaminated with 1.26 pg/g of 1,2,3,4,6,7,8,9-OCDD, leading to a qualification limit of 6.3 pg/g. All detections in associated samples were above the qualification limit and no qualification is required.

Qualification: None required.

Rinsate Blanks – Rinse blank EB10-09/05/2022 (results reported in SDG 20342) is associated with all samples with results reported in this SDG. The rinsate blank was contaminated with 1,2,3,4,6,7,8,9-OCDD at 2.18 pg/L. This result is less than the concentration in the associated aqueous method blank and the detected OCDD in the rinse blank is due to aqueous preparation contamination, not field cross contamination.

Qualification: None required.

Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) – LCS/LCSD %Rs and RPDs were within QAPP control limits.

Qualification: None required.

Surrogates – All surrogates (labeled standards) were within control limits.

Qualification: None required.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) – An MS/MSD was performed using sample SIB-SC-H01-3-4-09/03/2022. The MS had a high %R for 1,2,3,4,6,7,8-HpCDD, 1,2,3,4,6,7,8,9-OCDD, and 1,2,3,4,6,7,8-HpCDF. RPDs for these three analytes were outside control limits as well. Results for these analytes in the parent sample should be qualified J-MSH,MSP.

An MS/MSD was performed using sample SIB-SC-B04-2-3-09/04/2022. The MS and/or MSD had a high %R for 1,2,3,4,6,7,8,9-OCDD and 1,2,3,4,6,7,8-HpCDF. For 1,2,3,4,6,7,8,9-OCDD, the sample concentration was >4x the spike concentration and the %R results are not applicable. The 1,2,3,4,6,7,8-HpCDF result in the parent sample should be qualified J-MSH. All RPDs were within control limits.

***Qualification:* The 1,2,3,4,6,7,8-HpCDD, 1,2,3,4,6,7,8,9-OCDD, and 1,2,3,4,6,7,8-HpCDF results for sample SIB-SC-H01-3-4-09/03/2022 are qualified J-MSH,MSP. The 1,2,3,4,6,7,8-HpCDF result in sample SIB-SC-B04-2-3-09/04/2022 is qualified J-MSH.**

Field Duplicate – Sample FD-55-09/03/2022 is a field duplicate of sample SIB-SC-H01-2-3-09/03/2022. All results in this duplicate pair met precision criteria. Sample SIB-SC-B04-3-4-09/04/2022 is the parent sample of field duplicate FD-56-09/04/022 (results reported in SDG 20437). All results in this duplicate pair met precision criteria.

Qualification: None required.

Compound Quantitation – Analyte non-detections were reported as the EDL and qualified U. Analytes detected between the EDL and PQL were reported as J-qualified results by the laboratory. These J qualifiers were retained unless superseded by a more severe qualifier.

If a detected analyte has an ion ratio outside the characteristic ion ratio window, the result is reported as an estimated maximum potential concentration. All results reported as an EMPC (a “K” flag is present in the laboratory qualifier) are qualified J-EMPC unless superseded by a higher priority qualifier.

2,3,7,8-TCDF is not fully resolved on the DB-5MS column; when detected above the PQL on the DB-5MS column, the result was confirmed on a DB-225 column using the instrument ID listed in the case narrative. In cases where two results are reported for 2,3,7,8-TCDF for a sample, the result from the DB-225 column is selected for use and the result from the DB-5MS is qualified DNR-EXC.

In cases where a target analyte is detected at a concentration above the calibrated range, the laboratory's practice is to report the result with a laboratory qualifier of E without running a dilution so long as the detector is not saturated. The OCDD result for 1 affected sample is qualified J-ACR.

Qualification: The following results are qualified:

- All results reported with a laboratory qualifier of K are qualified J with reason code EMPC.
- All 2,3,7,8-TCDF results reported from the DB-5MS column that are paired with a 2,3,7,8-TCDF result from the DB-225 column are qualified DNR, reason code EXC; note that the reportable_result field for these results are populated with “Yes” by the laboratory and are changed to “No” for the affected results.
- One OCDD result reported with a laboratory qualifier of E is qualified J with reason code ACR; note that the reportable_result field for these results are populated with “No” by the laboratory and are changed to “Yes” for the affected results.

Qualification Summary Table (results in pg/g):

Sample	Analyte	Lab Value	Lab Qualifier	Validated Value	Validated Qualifier	Reason Code
SIB-SC-H01-0-1-09/03/2022	1,2,3,7,8-PENTACHLORODIBENZOFURAN	1.41	JK	1.41	J	EMPC

EcoChem, Inc.

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of compliance review (EPA Stage 2A) performed on sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Dioxins/Furans	E1613B	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, November 2020).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

Dioxin/Furan Compounds by EPA 1613B

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory and field quality control (QC) samples. All data received a compliance screening level of review (EPA Stage 2A). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES AND MATRIX	VALIDATION LEVEL
20437	13 Sediment	Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

For nine (9) samples, the date suffix in the sample ID is expressed as DDMMYYYY instead of DD/MM/YYYY in the "sample_name" field. For 1 sample, the "sample_name" field is not populated. All sample IDs in the "sys_sample_code" field match the chain-of-custody.

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table.

✓	Sample Receipt, Preservation, and Holding Times	1	Certified Reference Material
2	Laboratory Blanks	2	Field Duplicates
1	Field Blanks	✓	Target Analyte List
✓	Labeled Compound Recovery	✓	Reporting Limits
2	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	2	Compound Identification
✓	Laboratory Control Samples (LCS/LCSD)	2	Compound Quantitation

✓ Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned K-flags to values when a peak was detected but did not meet identification criteria. These values are considered positive identifications which are "estimated maximum possible concentrations" or EMPC. When these occurred in the method blank the results were evaluated as positive results. When these occurred in the associated samples, any EMPC values that were less than the method blank action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. The following field sample results were qualified as not detected:

CLIENT ID	ANALYTE	QUALIFIER
SIB-SC-B05-0-1-09/04/2022	1,2,3,4,7,8-HxCDF	U-MBL
	1,2,3,7,8-PeCDF	U-MBL
SIB-SC-B05-2-3-09/04/2022	1,2,3,7,8-PeCDF	U-MBL
SIB-SC-B05-3-4-09/04/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
SIB-SC-B05-4-5-09/04/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
SIB-SC-O07-2-3-09/04/2022	1,2,3,7,8-PeCDF	U-MBL
SIB-SC-O07-3-4-09/04/2022	1,2,3,4,6,7,8-HpCDF	U-MBL

Field Blanks

Equipment rinsate blanks associated with sediment cores were submitted separately from the associated field samples. Based on review of the table of equipment blank associations, equipment blank EB10-09052022 is associated with the samples with results reported in this SDG; results for this EB were reported in CFA SDG 20342. EB10-09052022 was free from all contamination.

Matrix Spike/Matrix Spike Duplicate

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. When the MS/MSD %R values indicate a potential low bias, associated results are estimated (J/UJ-MSL). Only the associated positive results are estimated (J-MSH) if the %R values indicate a potential high bias. No qualifiers are assigned for %R value outliers if the parent concentration is greater than 4x the spike concentration. Precision is evaluated using the relative percent difference (RPD) values calculated between the MS and MSD results. Associated positive results are estimated (J-MSP) if the RPD values indicate uncertainty. Qualifiers are only issued to the parent sample.

The MS/MSD analyses were performed using Sample FD-56-09/04/0222. The following qualifiers were assigned:

ANALYTE	MS %R	MSD %R	RPD	QUALIFIER
1,2,3,4,6,7,8-HpCDD	--	58.8	21.4	J-MSL,MSP
1,2,3,4,6,7,8,9-OCDD	--	--	38.7	J-MSP
1,2,3,4,6,7,8-HpCDF	--	68.8	22.2	J-MSL,MSP

Certified Reference Material

Puget Sound Sediment Reference Material was analyzed with this SDG. For 1,2,3,7,8,9-HxCDF, the true value was less than the practical quantitation limit (PQL), and the lower control limit was less than the estimated detection limit (EDL). This analyte was reported as not detected at the EDL. This analyte was judged as within acceptance limits after a review of the raw data. The recovery value for 1,2,3,7,8,9-HxCDD was less than the lower control limit.

Field Duplicates

For sediment samples, the RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL.

One set of field replicates SIB-SC-B06-0-1-09/05/2022 & FD-57-09/05/2022, were submitted. The following qualifiers were assigned:

ANALYTE	OUTLIER TYPE	QUALIFIER
1,2,3,4,6,7,8-HpCDF	RPD	J-FDPR
1,2,3,4,6,7,8-HpCDD	RPD	J-FDPR
1,2,3,4,7,8-HxCDD	DIFFERENCE	J-FDPA
1,2,3,6,7,8-HxCDD	DIFFERENCE	J-FDPA
1,2,3,7,8,9-HxCDD	DIFFERENCE	J-FDPA
1,2,3,7,8-PeCDD	DIFFERENCE	J-FDPA
2,3,7,8-TCDD	DIFFERENCE	J-FDPA
Total HpCDF	RPD	J-FDPR
Total HxCDF	RPD	J-FDPR
Total HxCDD	RPD	J-FDPR
OCDF	RPD	J-FDPR
OCDD	RPD	J-FDPR
Total PeCDF	DIFFERENCE	J-FDPA
Total PeCDD	DIFFERENCE	J-FDPA
Total TCDF	DIFFERENCE	J-FDPA
Total HpCDD	RPD	J-FDPR

FD-56-09/04/0222 was also submitted, however; parent sample SIB-SC-B04-3-4-09042022 was not available for review. No data were qualified.

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF positive results when using the DB5 GC column for analysis. The DB5 column cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. Although the laboratory used a DB-5MS column which more adequately separates TCDF isomers, the laboratory still performed a second column confirmation on a DB-225 column when 2,3,7,8-TCDF was detected, and the concentration was greater than the reporting limit. Both sets of results were reported. The 2,3,7,8-TCDF results from the DB-5MS column were qualified do-not-report (DNR-EXC) in favor of the results from the DB-225 column.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. These results were K-flagged by the laboratory. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were qualified (J-VJ).

Compound Quantitation

The laboratory flagged sample results with an "E" flag indicating the sample results exceeded the calibrated linear range of the instrument. These results were estimated (J-ACR).

The laboratory P-flagged several results to indicate interference from diphenyl ether. These results were estimated (J-VJ).

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. With the exceptions noted above, accuracy was acceptable as demonstrated by the LCS/LCSD, labeled compound, SRM, and MS/MSD recoveries. With the exceptions noted above, precision was also acceptable as indicated by the LCS/LCSD, MS/MSD and field duplicate RPDs.

Data were estimated to indicate that EMPC values are estimated maximum possible concentrations. Detection limits were elevated due to method blank contamination. Data were also estimated due to MS/MSD accuracy and precision outliers, field duplicate precision outliers, diphenyl ether interferences, as well as calibration range exceedances.

Data were flagged as do-not-report (DNR) to indicate which result from multiple reported analyses should not be used. Data that have been flagged DNR should not be used for any purpose.

All other data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.
-----	-----------------------------------------------------------------------------------------

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)

	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r ² below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

QC Element	Reason Code	Definition
Low-Level Calibration Check	LLCH	Low-level calibration check above the upper limit
Low-Level Calibration Check	LLCL	Low-level calibration check below the lower limit
Low-Level Calibration Check	LLXL	Low-level calibration check below the lower limit, extreme discrepancy
Method Blank	MBH	Method blank result \geq LOQ
Method Blank	MBHB	Result is judged to be biased high based on associated method blank result
Method Blank	MBL	Method blank result $<$ LOQ
Matrix Spike	MSH	MS and/or MSD %R above acceptance criterion
Matrix Spike	MSL	MS and/or MSD %R below acceptance criterion
Matrix Spike	MSLX	MS and/or MSD %R below acceptance criterion, extreme discrepancy
Matrix Spike	MSP	MS/MSD RPD above acceptance criterion
Post-Digestion Spike	PDH	Post-digestion spike recovery high
Post-Digestion Spike	PDL	Post-digestion spike recovery low
Post-Digestion Spike	PDLX	Post-digestion spike recovery low, extreme discrepancy
Post-Digestion Spike	PDN	Post-digestion spike not performed or not applicable and serial dilution result not performed or not applicable
Sample Delivery and Condition	BUB	Bubbles $>$ 5 millimeters in volatile organic compounds vial
Sample Delivery and Condition	DAM	Sample container damaged
Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor

DATA VALIDATION REPORT

HGL – SWAN ISLAND BASIN

Prepared for:

HydroGeoLogic, Inc
11107 Sunset Hills Rd. Suite 400
Reston, VA 20190

Prepared by:

EcoChem, Inc.
500 Union Street, Suite 1010
Seattle, WA 98101

EcoChem Project: C28601-1

SDG: 20451

May 25, 2023

Approved for Release:

A handwritten signature in black ink, appearing to read "Michela Hernandez". The signature is written in a cursive style and is positioned above a horizontal line.

Michela Hernandez
Senior Project Chemist
EcoChem, Inc.

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of summary review (EPA Stage 2A) performed on sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
PCB Congeners	EPA 1668C	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, November 2020).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

PCB Congeners by EPA 1668C

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory and field quality control (QC) samples. All data received a compliance screening level of review (EPA Stage 2A). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the Sample Index for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
20451	17 Sediment	Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

For 5 samples, the date suffix in the sample ID is expressed as DDMMYYYY instead of DD/MM/YYYY in the "sample_name" field. For 10 samples, the "sample_name" field is not populated. All sample IDs in the "sys_sample_code" field match the chain-of-custody.

Coeluting PCB congeners are listed in the "custom_field_1" field. For PCB-59/62/75, the "custom_field_1" field is incorrectly populated with "2,3,3',6-TETRACHLOROBIPHENYL (59)". A DV comment was added to the "custom_field_2" field to flag the error.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

✓	Sample Receipt, Preservation, and Holding Times	1	Certified Reference Material
2	Laboratory Blanks	2	Field Duplicates
1	Field Blanks	✓	Target Analyte List
✓	Labeled Compound Recovery	1	Reporting Limits
2	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	2	Compound Identification
✓	Laboratory Control Samples (LCS/LCSD)	2	Compound Quantitation

✓ Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned K-flags to values when a peak was detected but did not meet identification criteria. These values are considered positive identifications which are "estimated maximum possible concentrations" or EMPC. When these occurred in the method blank the results were evaluated as positive results. When these occurred in the associated samples, any EMPC values that were less than the method blank action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. Various target analytes were detected in the method blanks, however only the following analytes required qualification:

Client ID	Analyte	Qualifier
SIB-SC-L03-1-2-07/27/2022	PCB-11	U-MBL
SIB-SC-L03-2-3-07/27/2022	PCB-11	U-MBL
FD-21-07/27/2022	PCB-11	U-MBL
	PCB-3	U-MBL
SIB-SC-L03-5-6-07/27/2022	PCB-11	U-MBL
SIB-SC-D10-1-2-08/03/2022	PCB-11	U-MBL
SIB-SC-D10-2-3-08/03/2022	PCB-11	U-MBL
SIB-SC-D10-3-4-08/03/2022	PCB-11	U-MBL
	PCB-3	U-MBL
SIB-SC-D10-4-5-08/03/2022	PCB-11	U-MBL

SIB-SC-D07-1-2-08/04/2022	PCB-11	U-MBL
FD-25-08/04/2022	PCB-11	U-MBL
SIB-SC-D07-2-3-08/04/2022	PCB-11	U-MBL
SIB-SC-D07-3-4-08/04/2022	PCB-11	U-MBL
SIB-SC-D07-4-5-08/04/2022	PCB-11	U-MBL
SIB-SC-D07-5-6-08/04/2022	PCB-11	U-MBL
	PCB-3	U-MBL

Field Blanks

Equipment rinsate blanks associated with sediment cores were submitted separately from the associated field samples. Based on review of the table of equipment blank associations, equipment blanks EB05-07262022 and EB06-08042022 are associated with the samples with results reported in this SDG; results for these EB were reported in CFA SDGs 20124 and 20186. Several results were detected in EB05-07262022, however; no data were qualified based on field blank contamination. EB06-08042022 was not evaluated as SDG 20186 was not submitted to EcoChem for review.

Matrix Spikes/Matrix Spike Duplicates

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. When the MS/MSD %R values indicate a potential low bias, associated results are estimated (J/UJ-MSL). Only the associated positive results are estimated (J-MSH) if the %R values indicate a potential high bias. No qualifiers are assigned for %R value outliers if the parent concentration is greater than 4x the spike concentration. Precision is evaluated using the relative percent difference (RPD) values calculated between the MS and MSD results. Associated positive results are estimated (J-MSP) if the RPD values indicate uncertainty. Qualifiers are only issued to the parent sample.

Sample SIB-SC-L03-3-4-07/27/2022 was analyzed as the matrix spike. The RPD value for PCB-118 was greater than the control limit; the associated parent sample result was estimated (J-MSP).

Certified Reference Material

No certified reference materials were analyzed.

Field Duplicates

For sediment samples, the RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL.

Samples SIB-SC-L03-2-3-07/27/2022 & FD-21-07/27/2022 were submitted as field duplicates. All acceptance criteria were met.

Samples SIB-SC-D07-1-2-08/04/2022 & FD-25-08/04/2022 were submitted as field duplicates. The following outliers were noted:

Reporting Limits

The laboratory reporting limits were greater than the QAPP CFA Sensitivity Limits.

Compound Identification

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. These results were K-flagged by the laboratory. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were qualified (J-VJ).

Compound Quantitation

For Sample FD-25-08/04/2022, results for several analytes were E-flagged by the laboratory to indicate the result was reported from an instrument response that exceeded the calibration range of the instrument. These results were estimated (J-ACR).

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. Accuracy was acceptable as demonstrated by the labeled compound, LCS/LCSD, and MS/MSD recoveries. With the exception noted above, precision was also acceptable as demonstrated by the LCS/LCSD, MS/MSD, and field duplicate RPD values.

Data were qualified as not detected due to method blank contamination. Data were estimated to indicate that EMPC values are estimated maximum possible concentrations. Data were also estimated due to calibration range exceedances and MS/MSD and field duplicate precision outliers.

All data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r ² below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

QC Element	Reason Code	Definition
Low-Level Calibration Check	LLCH	Low-level calibration check above the upper limit
Low-Level Calibration Check	LLCL	Low-level calibration check below the lower limit
Low-Level Calibration Check	LLXL	Low-level calibration check below the lower limit, extreme discrepancy
Method Blank	MBH	Method blank result \geq LOQ
Method Blank	MBHB	Result is judged to be biased high based on associated method blank result
Method Blank	MBL	Method blank result $<$ LOQ
Matrix Spike	MSH	MS and/or MSD %R above acceptance criterion
Matrix Spike	MSL	MS and/or MSD %R below acceptance criterion
Matrix Spike	MSLX	MS and/or MSD %R below acceptance criterion, extreme discrepancy
Matrix Spike	MSP	MS/MSD RPD above acceptance criterion
Post-Digestion Spike	PDH	Post-digestion spike recovery high
Post-Digestion Spike	PDL	Post-digestion spike recovery low
Post-Digestion Spike	PDLX	Post-digestion spike recovery low, extreme discrepancy
Post-Digestion Spike	PDN	Post-digestion spike not performed or not applicable and serial dilution result not performed or not applicable
Sample Delivery and Condition	BUB	Bubbles $>$ 5 millimeters in volatile organic compounds vial
Sample Delivery and Condition	DAM	Sample container damaged
Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor

EcoChem, Inc.

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of summary review (EPA Stage 2A) performed on sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
PCB Congeners	EPA 1668C	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, November 2020).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

PCB Congeners by EPA 1668C

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory and field quality control (QC) samples. All data received a compliance screening level of review (EPA Stage 2A). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the Sample Index for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
20452	21 Sediment	Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

For 5 samples, the date suffix in the sample ID is expressed as DDMMYYYY instead of DD/MM/YYYY in the "sample_name" field. For 15 samples, the "sample_name" field is not populated. All sample IDs in the "sys_sample_code" field match the chain-of-custody.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

✓	Sample Receipt, Preservation, and Holding Times	1	Certified Reference Material
2	Laboratory Blanks	2	Field Duplicates
1	Field Blanks	✓	Target Analyte List
✓	Labeled Compound Recovery	1	Reporting Limits
2	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	2	Compound Identification
✓	Laboratory Control Samples (LCS/LCSD)	2	Compound Quantitation

✓ Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned K-flags to values when a peak was detected but did not meet identification criteria. These values are considered positive identifications which are "estimated maximum possible concentrations" or EMPC. When these occurred in the method blank the results were evaluated as positive results. When these occurred in the associated samples, any EMPC values that were less than the method blank action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. Various target analytes were detected in the method blanks, however only the following analytes required qualification in one or more samples:

Extraction Batch 51276: The following field sample results were qualified as not detected:

Client ID	Analyte	Qualifier
SIB-SC-G04-4-5-08/16/2022	PCB-11	U-MBL
	PCB-3	U-MBL
SIB-SC-G04-5-6-08/16/2022	PCB-11	U-MBL

Field Blanks

Equipment rinsate blanks associated with sediment cores were submitted separately from the associated field samples. Based on review of the table of equipment blank associations, equipment blanks EB07-08092022 and EB08-08212022 are associated with the samples with results reported in this SDG; results for these EB were reported in CFA SDGs 20282 and 20186. Several results were detected in EB08-08212022, however; no data were qualified based on field blank contamination. EB07-08092022 was not evaluated as SDG 20186 was not submitted to EcoChem for review.

Matrix Spikes/Matrix Spike Duplicates

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. When the MS/MSD %R values indicate a potential low bias, associated results are estimated (J/UJ-MSL). Only the associated positive results are estimated (J-MSH) if the %R values indicate a potential high bias. No qualifiers are assigned for %R value outliers if the parent concentration is greater than 4x the spike concentration. Precision is evaluated using the relative percent difference

(RPD) values calculated between the MS and MSD results. Associated positive results are estimated (J-MSP) if the RPD values indicate uncertainty. Qualifiers are only issued to the parent sample.

For batch 51276, Sample SIB-SC-G04-4-5-08/16/2022 was analyzed as the matrix spike.

ANALYTE	MS %R	MSD %R	RPD	QUALIFIER
PCB-105	136	OK	32	J-MSH,MSP
PCB-118	240	OK	59	J-MSH,MSP

Certified Reference Material

No certified reference materials were analyzed.

Field Duplicates

For sediment samples, the RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL.

Two sets of field duplicates were submitted.

Samples SIB-SC-B10-2-3-08/11/2022 & FD-35-08/11/2022 were submitted as field duplicates. Field precision was acceptable.

Samples SIB-SC-G04-5-6-08/16/2022 from this SDG & FD-35-08/11/2022 from SDG 20453 were submitted as field duplicates. The following qualifiers were assigned:

Analyte	Outlier Type	Qualifier
PCB-153/168	Difference	J-FDPA
PCB-180/193	Difference	J-FDPA
PCB-170	Difference	J-FDPA
PCB-52	Difference	J-FDPA
PCB-99	Difference	J-FDPA
PCB-110/115	Difference	J-FDPA
PCB-132	Difference	J-FDPA
PCB-174	Difference	J-FDPA
PCB-187	Difference	J-FDPA
PCB-129/138/163	Difference	J-FDPA
PCB-90/101/112	Difference	J-FDPA
PCB-147/149	Difference	J-FDPA
PCB-118	RPD	J-FDPR
PCB-95	RPD	J-FDPR
Total PCB	RPD	J-FDPR

Reporting Limits

The laboratory reporting limits were greater than the QAPP CFA Sensitivity Limits.

Compound Identification

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. These results were K-flagged by the laboratory. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were qualified (J-VJ).

Compound Quantitation

For Sample SIB-SC-I04-3-4-08/09/2022, results for several analytes were E-flagged by the laboratory to indicate the result was reported from an instrument response that exceeded the calibration range of the instrument. These results were estimated (J-ACR).

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. With the exceptions noted above, accuracy was acceptable as demonstrated by the labeled compound, LCS/LCSD, and MS/MSD recoveries. With the exceptions noted above, precision was also acceptable as reported by the LCS/LCSD, matrix spike/matrix spike duplicate, and field duplicate RPD values.

Data were qualified as not detected due to method blank contamination. Data were estimated to indicate that EMPC values are estimated maximum possible concentrations. Data were also estimated due to calibration range exceedances and MS/MSD precision and accuracy outliers.

All data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

	Next Review Date: June 2023

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r ² below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

QC Element	Reason Code	Definition
Low-Level Calibration Check	LLCH	Low-level calibration check above the upper limit
Low-Level Calibration Check	LLCL	Low-level calibration check below the lower limit
Low-Level Calibration Check	LLXL	Low-level calibration check below the lower limit, extreme discrepancy
Method Blank	MBH	Method blank result \geq LOQ
Method Blank	MBHB	Result is judged to be biased high based on associated method blank result
Method Blank	MBL	Method blank result $<$ LOQ
Matrix Spike	MSH	MS and/or MSD %R above acceptance criterion
Matrix Spike	MSL	MS and/or MSD %R below acceptance criterion
Matrix Spike	MSLX	MS and/or MSD %R below acceptance criterion, extreme discrepancy
Matrix Spike	MSP	MS/MSD RPD above acceptance criterion
Post-Digestion Spike	PDH	Post-digestion spike recovery high
Post-Digestion Spike	PDL	Post-digestion spike recovery low
Post-Digestion Spike	PDLX	Post-digestion spike recovery low, extreme discrepancy
Post-Digestion Spike	PDN	Post-digestion spike not performed or not applicable and serial dilution result not performed or not applicable
Sample Delivery and Condition	BUB	Bubbles $>$ 5 millimeters in volatile organic compounds vial
Sample Delivery and Condition	DAM	Sample container damaged
Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor
