DATA VALIDATION REPORT

HGL – SWAN ISLAND BASIN

Prepared for:

HydroGeoLogic, Inc
11107 Sunset Hills Rd. Suite 400
Reston, VA 20190

Prepared by:

EcoChem, Inc.
500 Union Street, Suite 1010
Seattle, WA 98101

EcoChem Project: C28601-1

SDG: 20454

May 25, 2023

Approved for Release:

A handwritten signature in black ink, appearing to read "Michela Hernandez". The signature is written in a cursive style and is positioned above a horizontal line.

Michela Hernandez
Senior Project Chemist
EcoChem, Inc.

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of summary review (EPA Stage 2A) performed on sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
PCB Congeners	EPA 1668C	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, November 2020).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

PCB Congeners by EPA 1668C

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory and field quality control (QC) samples. All data received a compliance screening level of review (EPA Stage 2A). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the Sample Index for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
20454	18 Sediment	Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

For 10 samples, the date suffix in the sample ID is expressed as DDMMYYYY instead of DD/MM/YYYY in the "sample_name" field. For 6 samples, the "sample_name" field is not populated. All sample IDs in the "sys_sample_code" field match the chain-of-custody (COC).

For Sample FD-46-08192022, the collection time on the COC is recorded as 14:09. The EDD lists the collection time as 14:05.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

✓	Sample Receipt, Preservation, and Holding Times	2	Field Duplicates
2	Laboratory Blanks	✓	Target Analyte List
1	Field Blanks	1	Reporting Limits
✓	Labeled Compound Recovery	2	Compound Identification
1	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	✓	Compound Quantitation
✓	Laboratory Control Samples (LCS/LCSD)	1	Field Replicates
1	Certified Reference Material		

✓ *Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.*

¹ *Quality control results are discussed below, but no data were qualified.*

² *Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.*

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned K-flags to values when a peak was detected but did not meet identification criteria. These values are considered positive identifications which are "estimated maximum possible concentrations" or EMPC. When these occurred in the method blank the results were evaluated as positive results. When these occurred in the associated samples, any EMPC values that were less than the method blank action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. Various target analytes were detected in the method blanks, however only the following analytes required qualification in one or more samples:

Extraction Batch 51384: The following field sample results were qualified as not detected:

Field Blanks

Equipment rinsate blanks associated with sediment cores were submitted separately from the associated field samples. Based on review of the table of equipment blank associations, equipment blanks EB08-08212022 and EB09-08242022 are associated with the samples with results reported in this SDG; results for these EB were reported in CFA SDG 20282. Several results were detected in EB08-08212022 and EB09-08242022, however; no data were qualified based on field blank contamination.

Matrix Spike/Matrix Spike Duplicates

Sample SIB-SC-L07-2-3-08/21/2022 was used for the matrix spike/matrix spike duplicate (MS/MSD) analyses. The MS/MSD percent recovery (%R) values for PCB-54 were greater than the upper control limit. This analyte was not detected in the parent sample; no data were qualified.

Certified Reference Material

No certified reference materials were analyzed.

Field Duplicates

For sediment samples, the relative percent difference (RPD) control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL.

Two sets of field duplicates were submitted:

- SIB-SC-103-3-4-08192022 from SDG 20430 & FD-46-08/19/2022 from this SDG. Field precision was acceptable.
- SIB-SC-L07-1-2-08/21/2022 & FD-49-08/21/2022:

ANALYTE	OUTLIER TYPE	QUALIFIER
PCB-99	RPD	J-FDPR
PCB-105	RPD	J-FDPR
PCB-118	RPD	J-FDPR
PCB-177	Difference	J-FDPA
PCB-136	Difference	J-FDPA
PCB-141	Difference	J-FDPA
PCB-146	Difference	J-FDPA
PCB-66	Difference	J-FDPA
PCB-135/151	Difference	J-FDPA

ANALYTE	OUTLIER TYPE	QUALIFIER
PCB-44/47/65	Difference	J-FDPA
PCB-61/70/74/76	Difference	J-FDPA

Reporting Limits

The laboratory practical quantitation limits (PQL) were greater than those provided in the QAPP. Although some individual congeners were reported as not detected at elevated detection limits, the overall total PCB concentrations for most samples were greater than the site CUL.

Compound Identification

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. These results were K-flagged by the laboratory. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were qualified (J-VJ).

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. With the exceptions noted above, accuracy was acceptable as demonstrated by the labeled compound, LCS/LCSD, and MS/MSD recoveries. With the exceptions noted above, precision was also acceptable as reported by the LCS/LCSD, matrix spike/matrix spike duplicate, and field duplicate RPD values.

Data were qualified as not detected due to method blank contamination. Data were estimated to indicate that EMPC values are estimated maximum possible concentrations. Data were also estimated due to field duplicate precision outliers.

All data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r ² below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

QC Element	Reason Code	Definition
Low-Level Calibration Check	LLCH	Low-level calibration check above the upper limit
Low-Level Calibration Check	LLCL	Low-level calibration check below the lower limit
Low-Level Calibration Check	LLXL	Low-level calibration check below the lower limit, extreme discrepancy
Method Blank	MBH	Method blank result \geq LOQ
Method Blank	MBHB	Result is judged to be biased high based on associated method blank result
Method Blank	MBL	Method blank result $<$ LOQ
Matrix Spike	MSH	MS and/or MSD %R above acceptance criterion
Matrix Spike	MSL	MS and/or MSD %R below acceptance criterion
Matrix Spike	MSLX	MS and/or MSD %R below acceptance criterion, extreme discrepancy
Matrix Spike	MSP	MS/MSD RPD above acceptance criterion
Post-Digestion Spike	PDH	Post-digestion spike recovery high
Post-Digestion Spike	PDL	Post-digestion spike recovery low
Post-Digestion Spike	PDLX	Post-digestion spike recovery low, extreme discrepancy
Post-Digestion Spike	PDN	Post-digestion spike not performed or not applicable and serial dilution result not performed or not applicable
Sample Delivery and Condition	BUB	Bubbles $>$ 5 millimeters in volatile organic compounds vial
Sample Delivery and Condition	DAM	Sample container damaged
Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor

The following Stage 2A review was performed on the requested analyses. No results were rejected, and analytical completeness is 100%.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No completeness issues were noted.

Qualification: None required.

Sample Delivery and Condition – All samples arrived intact at the laboratory in acceptable condition and temperature and were properly preserved. The label and COC discrepancies for the submitted MS/MSD sample were resolved by the laboratory with the client.

Qualification: None required.

Holding Times – All samples were prepared and analyzed within their required holding times.

Qualification: None required.

Method Blanks – The method 1613B method bank was contaminated with 0.222 pg/g 1,2,3,4,6,7,8-HpCDF, leading to a qualification limit of 1.11 pg/g. The 1,2,3,4,6,7,8-HpCDF results for samples SIB-SC-B25-1-2-07/25/2022, SIB-SC-B25-2-3-07/25/2022, and SIB-SC-B25-4-5-07/25/2022 should be qualified U-MBL.

Qualification: The 1,2,3,4,6,7,8-HpCDF results for samples SIB-SC-B25-1-2-07/25/2022, SIB-SC-B25-2-3-07/25/2022, and SIB-SC-B25-4-5-07/25/2022 are qualified U, reason code MBL. Note that the “detect_flag” field in the EDD is changed from “Y” to “N” for the affected results.

Rinsate Blanks – Rinse blank EB05-07/26/2022 (results reported in SDG 20123) is associated with all samples with results reported in this SDG. The rinse blank was free from contamination.

Qualification: None required.

Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) – LCS/LCSD %Rs and RPDs were within QAPP control limits with the exception of the RPDs for 1,2,3,4,6,7,8-HpCDD and OCDF. All detected results for 1,2,3,4,6,7,8-HpCDD and OCDF should be qualified J-LCSP; non-detected results do not require qualification.

Qualification: All detected results for 1,2,3,4,6,7,8-HpCDD and OCDF are qualified J, reason code LCSP.

Surrogates – All surrogates (labeled standards) were within control limits.

Qualification: None required.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) – An MS/MSD was performed using sample SIB-SC-E33-8-9-07/25/2022. The MS had an extremely low %R for 1,2,3,4,6,7,8-HpCDD and a low %R for OCDF; although both the MS and the MSD had extremely low %Rs for OCDD, the sample concentration was >4x the spike concentration and the %R results are not applicable. The MS/MSD pair showed high RPDs for 1,2,3,4,6,7,8-HpCDD and OCDD. For sample SIB-SC-E33-8-9-07/25/2022, the 1,2,3,4,6,7,8-HpCDD result should be qualified J-MSDLX,MSP, the OCDD result should be qualified J-MSP, and the OCDF result should be qualified J-MSL.

Qualification: The 1,2,3,4,6,7,8-HpCDD, OCDD, and OCDF results for sample SIB-SC-E33-8-9-07/25/2022 are qualified J-MSLX,MSP, J-MSP, and J-MSL, respectively.

Field Duplicate – Sample FD-19-07/25/2022 is a field duplicate of sample SIB-SC-E33-6-7-07/25/2022. All results in this duplicate pair met precision criteria.

Qualification: None required.

Compound Quantitation – Analyte non-detections were reported as the EDL and qualified U. Analytes detected between the EDL and PQL were reported as J-qualified results by the laboratory. These J qualifiers were retained unless superseded by a more severe qualifier.

If a detected analyte has an ion ratio outside the characteristic ion ratio window, the result is reported as an estimated maximum potential concentration. All results reported as an EMPC (a “K” flag is present in the laboratory qualifier) are qualified J-EMPC unless superseded by a higher priority qualifier.

2,3,7,8-TCDF is not fully resolved on the DB-5MS column; when detected above the PQL on the DB-5MS column, the result was confirmed on a DB-225 column using the instrument ID listed in the case narrative. In cases where two results are reported for 2,3,7,8-TCDF for a sample, the result from the DB-225 column is selected for use and the result from the DB-5MS is qualified DNR-EXC.

In cases where a target analyte is detected at a concentration above the calibrated range, the laboratory's practice is to report the result with a laboratory qualifier of E without running a dilution so long as the detector is not saturated. The OCDD results for 10 affected samples are qualified J-ACR.

Qualification: The following results are qualified:

- All results reported with a laboratory qualifier of K are qualified J with reason code EMPC.
- All 2,3,7,8-TCDF results reported from the DB-5MS column that are paired with a 2,3,7,8-TCDF result from the DB-225 column are qualified DNR, reason code EXC; ; note that the reportable_result field for these results are populated with "Yes" by the laboratory and are changed to "No" for the affected results.
- 10 OCDD results reported with a laboratory qualifier of E are qualified J with reason code ACR; note that the reportable_result field for these results are populated with "No" by the laboratory and are changed to "Yes" for the affected results.

Qualification Summary Table (results in pg/g):

Sample	Analyte	Lab Value	Lab Qualifier	Validated Value	Validated Qualifier	Reason Code

Senior Project Chemist
EcoChem, Inc.

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of compliance review (EPA Stage 2A) performed on sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Dioxins/Furans	E1613B	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, November 2020).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

Dioxin/Furan Compounds by EPA 1613B

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory and field quality control (QC) samples. All data received a compliance screening level of review (EPA Stage 2A). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES AND MATRIX	VALIDATION LEVEL
20466	14 Sediment	Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

For all samples, the date suffix in the sample ID is expressed as DDMMYYYY instead of DD/MM/YYYY in the "sample_name" field. All sample IDs in the "sys_sample_code" field match the chain-of-custody.

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	1	Certified Reference Material
1	Laboratory Blanks	1	Field Duplicates
1	Field Blanks	✓	Target Analyte List
✓	Labeled Compound Recovery	✓	Reporting Limits
2	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	2	Compound Identification
2	Laboratory Control Samples (LCS/LCSD)	2	Compound Quantitation

✓ Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

For Sample SIB-SC-F35-2-3-08/05/2022, the container collection time of 13:06 did not match the chain-of-custody (COC) time of 13:16. The COC time was used for login purposes.

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned K-flags to values when a peak was detected but did not meet identification criteria. These values are considered positive identifications which are "estimated maximum possible concentrations" or EMPC. When these occurred in the method blank the results were evaluated as positive results. When these occurred in the associated samples, any EMPC values that were less than the method blank action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency.

For extraction batch 51503, various target analytes were detected in the method blank, however all sample results were greater than the action levels; no qualifiers were assigned.

Field Blanks

Equipment rinsate blanks associated with sediment cores were submitted separately from the associated field samples. Based on review of the table of equipment blank associations, equipment blank EB06-08/04/2022 is associated with the samples with results reported in this SDG; results for this EB were reported in CFA SDG 20187. EB06-08/04/2022 was free from all contamination.

Matrix Spike/Matrix Spike Duplicate

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. When the MS/MSD %R values indicate a potential low bias, associated results are estimated (J/UJ-MSL). Only the associated positive results are estimated (J-MSH) if the %R values indicate a potential high bias. No qualifiers are assigned for %R value outliers if the parent concentration is greater than 4x the spike concentration. Precision is evaluated using the relative percent difference (RPD) values calculated between the MS and MSD results. Associated positive results are estimated (J-MSP) if the RPD values indicate uncertainty. Qualifiers are only issued to the parent sample.

The MS/MSD analyses were performed using Sample SIB-SC-F35-1-2-08/05/2022. The following qualifiers were assigned:

ANALYTE	MS %R	MSD %R	RPD	QUALIFIER
1,2,3,4,6,7,8-HpCDD	Parent > 4x Spike Conc.		88.4	J-MSP
OCDD	Parent > 4x Spike Conc.		107	J-MSP
2,3,7,8-TCDF	69.1	OK	25.3	J-MSL,MSP
1,2,3,4,6,7,8-HpCDF	43.7	OK	37.5	J-MSL,MSP
OCDF	16	OK	50.4	J-MSL,MSP

Laboratory Control Samples

Laboratory control spike/laboratory control spike duplicate (LCS/LCSD) samples were analyzed at the appropriate frequency. When the LCS/LCSD %R values indicate a potential low bias, associated results are estimated (J/UJ-LCSL). Only the associated positive results are estimated (J-LCSH) if the %R values indicate a potential high bias. Precision is evaluated using the relative percent difference (RPD) values calculated between the LCS and LCSD results. Associated positive results are estimated (J-LCSP) if the RPD values indicate uncertainty. Qualifiers are issued to all samples in the extraction batch.

For extraction batch 51503. The following qualifiers were assigned:

ANALYTE	LCS %R	LCSD %R	RPD	QUALIFIER
OCDD	OK	OK	28.3	J-LCSP

Certified Reference Material

Puget Sound Sediment Reference Material was analyzed with this SDG. For analytes with true values greater than the practical quantitation limit (PQL), all true values were within the control limits.

Field Duplicates

No field duplicates were submitted.

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF positive results when using the DB5 GC column for analysis. The DB5 column cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. Although the laboratory used a DB-5MS column which more adequately separates TCDF isomers, the laboratory still performed a second column confirmation on a DB-225 column when 2,3,7,8-TCDF was detected, and the concentration was greater than the reporting limit. Both sets of results were reported. The 2,3,7,8-TCDF results from the DB-5MS column were qualified do-not-report (DNR-EXC) in favor of the results from the DB-225 column.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. These results were K-flagged by the laboratory. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were qualified (J-VJ).

Compound Quantitation

The laboratory flagged sample results with an "E" flag indicating the sample results exceeded the calibrated linear range of the instrument. These results were estimated (J-ACR).

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. With the exceptions noted above, accuracy was acceptable as demonstrated by the LCS/LCSD, labeled compound, SRM, and MS/MSD recoveries. With the exceptions noted above, precision was also acceptable as indicated by the LCS/LCSD and MS/MSD RPDs.

Data were estimated to indicate that EMPC values are estimated maximum possible concentrations. Data were also estimated due to MS/MSD accuracy and precision outliers, an LCS/LCSD precision outlier, and calibration range exceedances.

Data were flagged as do-not-report (DNR) to indicate which result from multiple reported analyses should not be used. Data that have been flagged DNR should not be used for any purpose.

All other data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r ² below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

QC Element	Reason Code	Definition
Low-Level Calibration Check	LLCH	Low-level calibration check above the upper limit
Low-Level Calibration Check	LLCL	Low-level calibration check below the lower limit
Low-Level Calibration Check	LLXL	Low-level calibration check below the lower limit, extreme discrepancy
Method Blank	MBH	Method blank result \geq LOQ
Method Blank	MBHB	Result is judged to be biased high based on associated method blank result
Method Blank	MBL	Method blank result $<$ LOQ
Matrix Spike	MSH	MS and/or MSD %R above acceptance criterion
Matrix Spike	MSL	MS and/or MSD %R below acceptance criterion
Matrix Spike	MSLX	MS and/or MSD %R below acceptance criterion, extreme discrepancy
Matrix Spike	MSP	MS/MSD RPD above acceptance criterion
Post-Digestion Spike	PDH	Post-digestion spike recovery high
Post-Digestion Spike	PDL	Post-digestion spike recovery low
Post-Digestion Spike	PDLX	Post-digestion spike recovery low, extreme discrepancy
Post-Digestion Spike	PDN	Post-digestion spike not performed or not applicable and serial dilution result not performed or not applicable
Sample Delivery and Condition	BUB	Bubbles $>$ 5 millimeters in volatile organic compounds vial
Sample Delivery and Condition	DAM	Sample container damaged
Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor

The following Stage 2A review was performed on the requested analyses. No results were rejected, and analytical completeness is 100%.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No completeness issues were noted.

Qualification: None required.

Sample Delivery and Condition – All samples arrived intact at the laboratory in acceptable condition and temperature and were properly preserved with one exception. One of the sample containers for sample SIB-SC-E27-3-4-08/09/2022 arrived cracked and was transferred to a new 4 oz. container. No other discrepancies were noted.

Qualification: None required.

Holding Times – All samples were prepared and analyzed within their required holding times.

Qualification: None required.

Method Blanks – The method 1613B method bank was contaminated with 0.336 pg/g of 1,2,3,4,7,8-HxCDF, leading to a qualification limit of 1.68 pg/g. The 1,2,3,4,7,8-HxCDF results for samples SIB-SC-E27-12-13-

08/09/2022, SIB-SC-E27-13-14-08/09/2022, SIB-SC-E27-14-15-08/09/2022, and FD-31-08/09/2022 should be qualified U-MBL.

Qualification: The 1,2,3,4,7,8-HxCDF results for samples SIB-SC-E27-12-13-08/09/2022, SIB-SC-E27-13-14-08/09/2022, SIB-SC-E27-14-15-08/09/2022, and FD-31-08/09/2022 are qualified U, reason code MBL. Note that the “detect_flag” field in the EDD is changed from “Y” to “N” for the affected results.

Rinsate Blanks – Rinse blank EB07-08/09/2022 (results reported in SDG 20187) is associated with all samples with results reported in this SDG. The rinsate blank was contaminated with 1,2,3,4,6,7,8-HpCDD at 1.53 pg/L, 1,2,3,4,6,7,8,9-OCDD at 2.79 pg/L, 1,2,3,4,7,8-HxCDF at 0.902 pg/L, and 1,2,3,4,6,7,8-HpCDF at 1.85 pg/L, leading to qualification limits of 0.765, 1.395, 0.451, and 0.925 pg/g respectively. Detections of all of these analytes are greater than the qualification limits in all samples.

Qualification: None required.

Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) – LCS/LCSD %Rs were within QAPP control limits with the exception of 1,2,3,7,8-PeCDF, which yielded a recovery below control limits in the LCS. All detected results for 1,2,3,7,8-PeCDF should be qualified J-LCSSL; non-detected results should be qualified UJ-LCSSL. All RPDs were within QAPP control limits.

Qualification: All detected results for 1,2,3,7,8-PeCDF are qualified J, reason code LCSSL; non-detected results are qualified UJ, reason code LCSSL.

Surrogates – All surrogates (labeled standards) were within control limits.

Qualification: None required.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) – An MS/MSD was performed using sample SIB-SC-E27-3-4-08/09/2022. The MS had extremely low %R for 1,2,3,4,6,7,8-HpCDD, 1,2,3,4,6,7,8,9-OCDD, 1,2,3,4,6,7,8-HpCDF, and 1,2,3,4,6,7,8,9-OCDF and the MSD had a high %R for 1,2,3,4,6,7,8,9-OCDD. For 1,2,3,4,6,7,8-HpCDD and 1,2,3,4,6,7,8,9-OCDD, the sample concentration was >4x the spike concentration and the %R results are not applicable. The MS/MSD pair showed high RPDs for 1,2,3,6,7,8-HxCDD, 1,2,3,4,6,7,8-HpCDD, 1,2,3,4,6,7,8,9-OCDD, 1,2,3,4,6,7,8-HpCDF, and 1,2,3,4,6,7,8,9-OCDF. For sample SIB-SC-E27-3-4-08/09/2022, the 1,2,3,6,7,8-HxCDD, 1,2,3,4,6,7,8-HpCDD, and 1,2,3,4,6,7,8,9-OCDD results should be qualified J-MSP, and the 1,2,3,4,6,7,8-HpCDF and 1,2,3,4,6,7,8,9-OCDF results should be qualified J-MSLX,MSP.

Qualification: The 1,2,3,6,7,8-HxCDD, 1,2,3,4,6,7,8-HpCDD, and 1,2,3,4,6,7,8,9-OCDD results for sample SIB-SC-E27-3-4-08/09/2022 are qualified J-MSP, and the 1,2,3,4,6,7,8-HpCDF and 1,2,3,4,6,7,8,9-OCDF results are qualified J-MSLX,MSP.

Field Duplicate – Sample FD-31-08/09/2022 is a field duplicate of sample SIB-SC-E27-13-14-08/09/2022. All results in this duplicate pair met precision criteria with the exception of 1,2,3,4,6,7,8-HpCDD, 1,2,3,4,6,7,8,9-OCDD, 1,2,3,4,6,7,8-HpCDF, and 1,2,3,4,6,7,8,9-OCDF. The 1,2,3,4,6,7,8,9-OCDD results in samples FD-31-08/09/2022 and SIB-SC-E27-13-14-08/09/2022 should be qualified J-FDPR, while the others should be qualified J-FDPA.

Qualification: The 1,2,3,4,6,7,8,9-OCDD results in samples FD-31-08/09/2022 and SIB-SC-E27-13-14-08/09/2022 is qualified J-FDPR. The 1,2,3,4,6,7,8-HpCDD, 1,2,3,4,6,7,8-HpCDF, and 1,2,3,4,6,7,8,9-OCDF results are qualified J-FDPA.

Compound Quantitation – Analyte non-detections were reported as the EDL and qualified U. Analytes detected between the EDL and PQL were reported as J-qualified results by the laboratory. These J qualifiers were retained unless superseded by a more severe qualifier.

If a detected analyte has an ion ratio outside the characteristic ion ratio window, the result is reported as an estimated maximum potential concentration. All results reported as an EMPC (a "K" flag is present in the laboratory qualifier) are qualified J-EMPC unless superseded by a higher priority qualifier.

2,3,7,8-TCDF is not fully resolved on the DB-5MS column; when detected above the PQL on the DB-5MS column, the result was confirmed on a DB-225 column using the instrument ID listed in the case narrative. In cases where two results are reported for 2,3,7,8-TCDF for a sample, the result from the DB-225 column is selected for use and the result from the DB-5MS is qualified DNR-EXC.

In cases where a target analyte is detected at a concentration above the calibrated range, the laboratory's practice is to report the result with a laboratory qualifier of E without running a dilution so long as the detector is not saturated. The OCDD results for 9 affected samples are qualified J-ACR.

Qualification: The following results are qualified:

- All results reported with a laboratory qualifier of K are qualified J with reason code EMPC.
- All 2,3,7,8-TCDF results reported from the DB-5MS column that are paired with a 2,3,7,8-TCDF result from the DB-225 column are qualified DNR, reason code EXC; note that the reportable_result field for these results are populated with "Yes" by the laboratory and are changed to "No" for the affected results.
- Nine OCDD results reported with a laboratory qualifier of E are qualified J with reason code ACR; note that the reportable_result field for these results are populated with "No" by the laboratory and are changed to "Yes" for the affected results.
- One Heptachloro-p-dioxin result reported with a laboratory qualifier of E has the reportable_result field populated with "No" by the laboratory and is changed to "Yes". Although total congener results are not validated, this result is reportable.

Qualification Summary Table (results in pg/g):

Sample	Analyte	Lab Value	Lab Qualifier	Validated Value	Validated Qualifier	Reason Code
SIB-SC-E27-1-2-08/09/2022	1,2,3,4,7,8-Hexachlorodibenzofuran	26.9	K	26.9	J	EMPC

The following Stage 2A review was performed on the requested analyses. No results were rejected, and analytical completeness is 100%.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No completeness issues were noted.

Qualification: None required.

Sample Delivery and Condition – All samples arrived intact at the laboratory in acceptable condition and temperature and were properly preserved. No other discrepancies were noted.

Qualification: None required.

Holding Times – All samples were prepared and analyzed within their required holding times.

Qualification: None required.

Method Blanks – The method 1613B method bank was contaminated with the following analytes:

- 0.156 pg/g of 1,2,3,7,8-PeCDD, leading to a qualification limit of 0.780 pg/g
- 0.322 pg/g of 1,2,3,4,6,7,8-HpCDD, leading to a qualification limit of 1.61 pg/g
- 1.74 pg/g of 1,2,3,4,6,7,8,9-OCDD, leading to a qualification limit of 8.70 pg/g
- 0.2 pg/g of 1,2,3,7,8-PeCDF, leading to a qualification limit of 1.00 pg/g

- 0.128 pg/g of 2,3,4,7,8-PeCDF, leading to a qualification limit of 0.640 pg/g
- 0.264 pg/g of 1,2,3,4,7,8-HxCDF, leading to a qualification limit of 1.32 pg/g
- 0.214 pg/g of 1,2,3,6,7,8-HxCDF, leading to a qualification limit of 1.07 pg/g
- 0.638 pg/g of 1,2,3,4,6,7,8-HpCDF, leading to a qualification limit of 3.19 pg/g
- 0.38 pg/g of 1,2,3,4,6,7,8,9-OCDF, leading to a qualification limit of 1.9 pg/g

Results below the applicable qualification limit and should be qualified U-MBL.

Qualification: The following are qualified U-MBL. Note that the “detect_flag” field in the EDD is changed from “Y” to “N” for the affected results.

- 1,2,3,7,8-PeCDD result for sample SIB-SC-F23-2-3-08/17/2022
- 1,2,3,4,6,7,8-HpCDD results for samples SIB-SC-B23-1-2-08/20/2022, SIB-SC-B23-2-3-08/20/2022, SIB-SC-B23-3-4-08/20/2022, and SIB-SC-B23-5-6-08/20/2022
- 1,2,3,4,6,7,8,9-OCDD results for samples SIB-SC-B23-1-2-08/20/2022, SIB-SC-B23-2-3-08/20/2022, and SIB-SC-B23-3-4-08/20/2022
- 1,2,3,7,8-PeCDF results for samples SIB-SC-F23-1-2-08/17/2022, SIB-SC-F23-2-3-08/17/2022, and SIB-SC-F23-4-5-08/17/2022
- 1,2,3,4,6,7,8-HpCDF results for samples SIB-SC-B23-3-4-08/20/2022, SIB-SC-B23-4-5-08/20/2022, and SIB-SC-B23-5-6-08/20/2022
- 1,2,3,4,6,7,8,9-OCDF result for sample SIB-SC-B23-4-5-08/20/2022

Rinsate Blanks – Rinse blank EB08-08/21/2022 (results reported in SDG 20283) is associated with all samples with results reported in this SDG. The rinsate blank was contaminated with 1,2,3,4,6,7,8,9-OCDD at 4.36 pg/L; however, OCDD was also detected in the method blank at a comparable level. The contamination in this EB is likely due to aqueous sample preparation and not cross contamination and no qualification is required.

Qualification: None required.

Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) – LCS/LCSD %Rs and RPDs were within QAPP control limits.

Qualification: None required.

Surrogates – All surrogates (labeled standards) were within control limits.

Qualification: None required.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) – An MS/MSD was performed using sample SIB-SC-B23-2-3-08/20/2022. All %Rs and RPDs were within QAPP control limits.

Qualification: None required.

Field Duplicate – Parent sample SIB-SC-B23-1-2-08/20/2022 was analyzed in this SDG; this sample is associated with field duplicate FD-48-08/20/2022 analyzed in SDG 20469 . All precision criteria were met.

Qualification: None required.

Compound Quantitation – Analyte non-detections were reported as the EDL and qualified U. Analytes detected between the EDL and PQL were reported as J-qualified results by the laboratory. These J qualifiers were retained unless superseded by a more severe qualifier.

If a detected analyte has an ion ration outside the characteristic ion ratio window, the result is reported as an estimated maximum potential concentration. All results reported as an EMPC (a “K” flag is present in the laboratory qualifier) are qualified J-EMPC unless superseded by a higher priority qualifier.

2,3,7,8-TCDF is not fully resolved on the DB-5MS column; when detected above the PQL on the DB-5MS column, the result was confirmed on a DB-225 column using the instrument ID listed in the case narrative. In cases where two results are reported for 2,3,7,8-TCDF for a sample, the result from the DB-225 column is selected for use and the result from the DB-5MS is qualified DNR-EXC.

In cases where a target analyte is detected at a concentration above the calibrated range, the laboratory's practice is to report the result with a laboratory qualifier of E without running a dilution so long as the detector is not saturated. The OCDD results for 6 affected samples are qualified J-ACR.

Qualification: The following results are qualified:

- All results reported with a laboratory qualifier of K are qualified J with reason code EMPC.
- All 2,3,7,8-TCDF results reported from the DB-5MS column that are paired with a 2,3,7,8-TCDF result from the DB-225 column are qualified DNR, reason code EXC; note that the reportable_result field for these results are populated with "Yes" by the laboratory and are changed to "No" for the affected results.
- Six OCDD results reported with a laboratory qualifier of E are qualified J with reason code ACR; note that the reportable_result field for these results are populated with "No" by the laboratory and are changed to "Yes" for the affected results.
- One Heptachloro-p-dioxin result reported with a laboratory qualifier of E has the reportable_result field populated with "No" by the laboratory and is changed to "Yes". Although total congener results are not validated, this result is reportable.

Qualification Summary Table (results in pg/g):

Sample	Analyte	Lab Value	Lab Qualifier	Validated Value	Validated Qualifier	Reason Code
SIB-SC-E23-1-2-08/17/2022	2,3,7,8-TETRACHLORODIBENZOFURAN	4.81	--	4.81	DNR	EXC

The following Stage 2A review was performed on the requested analyses. No results were rejected, and analytical completeness is 100%.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No completeness issues were noted.

Qualification: None required.

Sample Delivery and Condition – All samples arrived intact at the laboratory in acceptable condition and temperature and were properly preserved. No other discrepancies were noted.

Qualification: None required.

Holding Times – All samples were prepared and analyzed within their required holding times.

Qualification: None required.

Method Blanks – The method blanks associated with this SDG were free from contamination with one exception. The method 1613B method bank associated with batch 51620 was contaminated with 0.108 pg/g of 2,3,7,8-TCDD, 0.22 pg/g of 1,2,3,4,6,7,8-HpCDD, 0.484 pg/g of 1,2,3,4,6,7,8,9-OCDD, and 0.284 pg/g of 1,2,3,4,6,7,8-HpCDF, leading to qualification limits of 0.54 pg/g, 1.1 pg/g, 2.42 pg/g, and 1.42 pg/g, respectively. Only sample SIB-SC-C26-5-6-08/23/2022 is associated with this batch, and all detections of these analytes are greater than the qualification limits.

Qualification: None required.

Rinsate Blanks – Rinse blank EB08-08/21/2022 (results reported in SDG 20283) is associated with all samples in this SDG sampled on 8/20/22 and 8/21/22. The rinsate blank was contaminated with 1,2,3,4,6,7,8,9-OCDD at 4.36 pg/L; however, OCDD was also detected in the method blank at a comparable level. The contamination in this EB is likely due to aqueous sample preparation and not cross contamination and no qualification is required.

Rinse blank EB09-08/24/2022 (results reported in SDG 20283) is associated with all samples in this SDG sampled on 8/22/22 and 8/23/22. The rinsate blank was contaminated with almost all target analytes, including:

- 1,2,3,7,8-PeCDD at 2.36 pg/L, leading to a qualification limit of 1.18 pg/g
- 1,2,3,4,7,8-HxCDD at 1.58 pg/L, leading to a qualification limit of 0.790 pg/g
- 1,2,3,6,7,8-HxCDD at 1.58 pg/L, leading to a qualification limit of 0.790 pg/g
- 1,2,3,7,8,9-HxCDD at 1.84 pg/L, leading to a qualification limit of 0.920 pg/g
- 1,2,3,4,6,7,8-HpCDD at 1.39 pg/L, leading to a qualification limit of 0.695 pg/g
- 1,2,3,4,6,7,8,9-OCDD at 2.49 pg/L; this result is comparable to the associated aqueous method blank result and not indicative of potential cross-contamination
- 1,2,3,7,8-PeCDF at 2.78 pg/L, leading to a qualification limit of 1.39 pg/g
- 2,3,4,7,8-PeCDF at 2.34 pg/L, leading to a qualification limit of 1.17 pg/g
- 1,2,3,4,7,8-HxCDF at 2.32 pg/L, leading to a qualification limit of 1.16 pg/g
- 1,2,3,6,7,8-HxCDF at 1.97 pg/L, leading to a qualification limit of 0.985 pg/g
- 2,3,4,6,7,8-HxCDF at 1.15 pg/L, leading to a qualification limit of 0.575 pg/g
- 1,2,3,7,8,9-HxCDF at 1.37 pg/L, leading to a qualification limit of 0.685 pg/g
- 1,2,3,4,6,7,8-HpCDF at 1.21 pg/L; this result is comparable to the associated aqueous method blank result and not indicative of potential cross-contamination
- 1,2,3,4,7,8,9-HpCDF at 1.37 pg/L, leading to a qualification limit of 0.685 pg/g

The 1,2,3,4,6,7,8-HpCDD results in sample SIB-SC-B34-1-2-08/22/2022 should be qualified U-EBL. The 1,2,3,7,8-PeCDF results in samples SIB-SC-C26-0-1-08/23/2022, SIB-SC-C26-3-4-08/23/2022, SIB-SC-C26-4-5-08/23/2022, and SIB-SC-C26-5-6-08/23/2022 should be qualified U-EBL. All other associated results are non-detections or above the applicable qualification limit.

***Qualification:* The 1,2,3,4,6,7,8-HpCDD result in sample SIB-SC-B34-1-2-08/22/2022 are qualified U-EBL. The 1,2,3,7,8-PeCDF results in samples SIB-SC-C26-0-1-08/23/2022, SIB-SC-C26-3-4-08/23/2022, SIB-SC-C26-4-5-08/23/2022, and SIB-SC-C26-5-6-08/23/2022 are qualified U-EBL. The detect_flag for the affected results is changed from Y to N**

Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) – All LCS/LCSD %Rs and RPDs were within QAPP control limits.

Qualification: None required.

Surrogates – All surrogates (labeled standards) were within control limits.

Qualification: None required.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) – An MS/MSD was performed using sample FD-48-08/20/2022. All %Rs and RPDs were within QAPP control limits.

Qualification: None required.

Field Duplicate – Field duplicate sample FD-48-08/20/2022 was analyzed with this SDG, while its parent sample, SIB-SC-B23-1-2-08/20/2022, was analyzed with SDG 20468. All precision criteria were met.

Qualification: None required.

Compound Quantitation – Analyte non-detections were reported as the EDL and qualified U. Analytes detected between the EDL and PQL were reported as J-qualified results by the laboratory. These J qualifiers were retained unless superseded by a more severe qualifier.

If a detected analyte has an ion ratio outside the characteristic ion ratio window, the result is reported as an estimated maximum potential concentration. All results reported as an EMPC (a “K” flag is present in the laboratory qualifier) are qualified J-EMPC unless superseded by a higher priority qualifier.

2,3,7,8-TCDF is not fully resolved on the DB-5MS column; when detected above the PQL on the DB-5MS column, the result was confirmed on a DB-225 column using the instrument ID listed in the case narrative. In cases where two results are reported for 2,3,7,8-TCDF for a sample, the result from the DB-225 column is selected for use and the result from the DB-5MS is qualified DNR-EXC.

In cases where a target analyte is detected at a concentration above the calibrated range, the laboratory’s practice is to report the result with a laboratory qualifier of E without running a dilution so long as the detector is not saturated. The OCDD results for 5 affected samples are qualified J-ACR.

***Qualification:* The following results are qualified:**

- **All results reported with a laboratory qualifier of K are qualified J with reason code EMPC.**
- **All 2,3,7,8-TCDF results reported from the DB-5MS column that are paired with a 2,3,7,8-TCDF result from the DB-225 column are qualified DNR, reason code EXC; ; note that the reportable_result field for these results are populated with “Yes” by the laboratory and are changed to “No” for the affected results.**
- **5 OCDD results reported with a laboratory qualifier of E are qualified J with reason code ACR; note that the reportable_result field for these results are populated with “No” by the laboratory and are changed to “Yes” for the affected results.**

Qualification Summary Table (results in pg/g):

The following Stage 2A review was performed on the requested analyses. No results were rejected, and analytical completeness is 100%.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No completeness issues were noted.

Qualification: None required.

Sample Delivery and Condition – All samples arrived intact at the laboratory in acceptable condition and temperature and were properly preserved. No other discrepancies were noted.

Qualification: None required.

Holding Times – All samples were prepared and analyzed within their required holding times.

Qualification: None required.

Method Blanks – The method 1613B method bank was free from contamination.

Qualification: None required.

Rinsate Blanks – Rinse blank EB09-08/24/2022 (results reported in SDG 20283) is associated with all samples in this SDG. The rinsate blank was contaminated with almost all target analytes, including:

- 1,2,3,7,8-PeCDD at 2.36 pg/L, leading to a qualification limit of 1.18 pg/g
- 1,2,3,4,7,8-HxCDD at 1.58 pg/L, leading to a qualification limit of 0.790 pg/g
- 1,2,3,6,7,8-HxCDD at 1.58 pg/L, leading to a qualification limit of 0.790 pg/g
- 1,2,3,7,8,9-HxCDD at 1.84 pg/L, leading to a qualification limit of 0.920 pg/g
- 1,2,3,4,6,7,8-HpCDD at 1.39 pg/L, leading to a qualification limit of 0.695 pg/g
- 1,2,3,4,6,7,8,9-OCDD at 2.49 pg/L; this result is comparable to the associated aqueous method blank result and not indicative of potential cross-contamination
- 1,2,3,7,8-PeCDF at 2.78 pg/L, leading to a qualification limit of 1.39 pg/g
- 2,3,4,7,8-PeCDF at 2.34 pg/L, leading to a qualification limit of 1.17 pg/g
- 1,2,3,4,7,8-HxCDF at 2.32 pg/L, leading to a qualification limit of 1.16 pg/g
- 1,2,3,6,7,8-HxCDF at 1.97 pg/L, leading to a qualification limit of 0.985 pg/g
- 2,3,4,6,7,8-HxCDF at 1.15 pg/L, leading to a qualification limit of 0.575 pg/g
- 1,2,3,7,8,9-HxCDF at 1.37 pg/L, leading to a qualification limit of 0.685 pg/g
- 1,2,3,4,6,7,8-HpCDF at 1.21 pg/L; this result is comparable to the associated aqueous method blank result and not indicative of potential cross-contamination
- 1,2,3,4,7,8,9-HpCDF at 1.37 pg/L, leading to a qualification limit of 0.685 pg/g

Detections in associated samples within the qualification limits should be qualified U-EBL.

***Qualification:* The following results were qualified U-EBL; the detect_flag for the affected results is changed from Y to N.**

- **The 1,2,3,7,8-PeCDD results in samples SIB-SC-C27-5-5.5-08/23/2022 and SIB-SC-E37-3-4-08/25/2022**
- **The 1,2,3,4,7,8-HxCDD result in sample SIB-SC-E37-0-1-08/25/2022**
- **The 1,2,3,7,8,9-HxCDD results in samples SIB-SC-B26-1-2-08/23/2022 and SIB-SC-B26-2-3-08/23/2022**
- **The 1,2,3,4,6,7,8-HpCDD result in sample SIB-SC-B26-3-4-08/23/2022**
- **The 1,2,3,7,8-PeCDF result in sample SIB-SC-C27-5-5.5-08/23/2022**
- **The 2,3,4,7,8-PeCDF results in samples SIB-SC-E37-0-1-08/25/2022, SIB-SC-E37-1-2-08/25/2022, and SIB-SC-E37-3-4-08/25/2022**
- **The 1,2,3,4,7,8-HxCDF results in samples SIB-SC-E37-0-1-08/25/2022 and SIB-SC-E37-1-2-08/25/2022**
- **The 1,2,3,6,7,8-HxCDF results in samples SIB-SC-E37-0-1-08/25/2022 and SIB-SC-E37-1-2-08/25/2022**

Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) – All LCS/LCSD %Rs and RPDs were within QAPP control limits.

Qualification: None required.

Surrogates – All surrogates (labeled standards) were within control limits.

Qualification: None required.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) – An MS/MSD was performed using sample SIB-SC-B26-3-4-08/23/2022. All %Rs and RPDs were within QAPP control limits. An MS/MSD was performed using

sample SIB-SC-E37-3-4-08/25/2022. All %Rs were within QAPP control limits, with the exception 1,2,3,4,6,7,8-HpCDD and 1,2,3,4,6,7,8,9-OCDD, which recovered above control limits in the MS. For 1,2,3,4,6,7,8,9-OCDD, the sample concentration was >4x the spike concentration and the %R results are not applicable. The 1,2,3,4,6,7,8-HpCDD result in sample SIB-SC-E37-3-4-08/25/2022 should be qualified J-MSH. All RPDs were within QAPP control limits with the exception of 1,2,3,4,6,7,8,9-OCDD. The 1,2,3,4,6,7,8,9-OCDD result in sample SIB-SC-E37-3-4-08/25/2022 should be qualified J-MSP.

Qualification: For sample SIB-SC-E37-3-4-08/25/2022, the 1,2,3,4,6,7,8-HpCDD result is qualified J-MSH and the 1,2,3,4,6,7,8,9-OCDD result is qualified J-MSP.

Field Duplicate – Sample FD-51-08/23/2022 was submitted as a field duplicate of sample SIB-SC-B26-2-3-08/23/2022. All precision criteria were met.

Qualification: None required.

Compound Quantitation – Analyte non-detections were reported as the EDL and qualified U. Analytes detected between the EDL and PQL were reported as J-qualified results by the laboratory. These J qualifiers were retained unless superseded by a more severe qualifier.

If a detected analyte has an ion ratio outside the characteristic ion ratio window, the result is reported as an estimated maximum potential concentration. All results reported as an EMPC (a “K” flag is present in the laboratory qualifier) are qualified J-EMPC unless superseded by a higher priority qualifier.

2,3,7,8-TCDF is not fully resolved on the DB-5MS column; when detected above the PQL on the DB-5MS column, the result was confirmed on a DB-225 column using the instrument ID listed in the case narrative. In cases where two results are reported for 2,3,7,8-TCDF for a sample, the result from the DB-225 column is selected for use and the result from the DB-5MS is qualified DNR-EXC.

In cases where a target analyte is detected at a concentration above the calibrated range, the laboratory's practice is to report the result with a laboratory qualifier of E without running a dilution so long as the detector is not saturated. The OCDD results for 5 affected samples are qualified J-ACR.

Qualification: The following results are qualified:

- All results reported with a laboratory qualifier of K are qualified J with reason code EMPC.
- All 2,3,7,8-TCDF results reported from the DB-5MS column that are paired with a 2,3,7,8-TCDF result from the DB-225 column are qualified DNR, reason code EXC; ; note that the reportable_result field for these results are populated with “Yes” by the laboratory and are changed to “No” for the affected results.
- 5 OCDD results reported with a laboratory qualifier of E are qualified J with reason code ACR; note that the reportable_result field for these results are populated with “No” by the laboratory and are changed to “Yes” for the affected results.
- One Heptachloro-p-dioxin result reported with a laboratory qualifier of E has the reportable_result field populated with “No” by the laboratory and is changed to “Yes”. Although total congener results are not validated, this result is reportable.

Qualification Summary Table (results in pg/g):

Sample	Analyte	Lab Value	Lab Qualifier	Validated Value	Validated Qualifier	Reason Code
SIB-SC-C27-0-1-08/23/2022	1,2,3,7,8,9-HEXACHLORODIBENZOFURAN	4.4	JK	4.4	J	EMPC

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of compliance review (EPA Stage 2A) performed on sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Dioxins/Furans	E1613B	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, November 2020).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT
HGL – Swan Island Basin
Dioxin/Furan Compounds by EPA 1613B

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory and field quality control (QC) samples. All data received a compliance screening level of review (EPA Stage 2A). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES AND MATRIX	VALIDATION LEVEL
20471	18 Sediment	Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

For thirteen (13) samples, the date suffix in the sample ID is expressed as DDMMYYYY instead of DD/MM/YYYY in the "sample_name" field. All sample IDs in the "sys_sample_code" field match the chain-of-custody.

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	1	Certified Reference Material
2	Laboratory Blanks	2	Field Duplicates
1	Field Blanks	✓	Target Analyte List
✓	Labeled Compound Recovery	✓	Reporting Limits
2	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	2	Compound Identification
✓	Laboratory Control Samples (LCS/LCSD)	2	Compound Quantitation

✓ Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

The container for Sample SIB-SC-D37-2-3-08/25/2022, arrived cracked. The sample was transferred to a new jar. Sample integrity was maintained; no data were qualified.

For Sample FD-52-08/25/2022, the container date listed 8/24/22, but the chain-of-custody (COC) listed 8/25/22. The COC date was used for login purposes.

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned K-flags to values when a peak was detected but did not meet identification criteria. These values are considered positive identifications which are "estimated maximum possible concentrations" or EMPC. When these occurred in the method blank the results were evaluated as positive results. When these occurred in the associated samples, any EMPC values that were less than the method blank action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. The following field sample results were qualified as not detected:

CLIENT ID	ANALYTE	QUALIFIER
FD-52-08/25/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
SIB-SC-D37-3-4-08/25/2022	2,3,7,8-TCDD	U-MBL
SIB-SC-D37-4-5-08/25/2022	2,3,7,8-TCDD	U-MBL
SIB-SC-D37-5-6-08/25/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
SIB-SC-C37-3-4-09/03/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
SIB-SC-C32-0-1-09/05/2022	2,3,7,8-TCDD	U-MBL
SIB-SC-C36-0-1-09/05/2022	2,3,7,8-TCDD	U-MBL

Field Blanks

Equipment rinsate blanks associated with sediment cores were submitted separately from the associated field samples. Based on review of the table of equipment blank associations, equipment blanks EB09-08242022 and EB10-09052022 are associated with the samples with results reported in this SDG; results for these EB were reported in CFA SDGs 20283 and 20432. EB09-08242022 was not evaluated as SDG 20283 was not submitted to EcoChem for review. EB10-09052022 was free from all contamination.

Matrix Spike/Matrix Spike Duplicate

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. When the MS/MSD %R values indicate a potential low bias, associated results are estimated (J/UJ-MSL). Only the associated positive results are estimated (J-MSH) if the %R values indicate a potential high bias. No qualifiers are assigned for %R value outliers if the parent concentration is

greater than 4x the spike concentration. Precision is evaluated using the relative percent difference (RPD) values calculated between the MS and MSD results. Associated positive results are estimated (J-MSP) if the RPD values indicate uncertainty. Qualifiers are only issued to the parent sample.

The MS/MSD analyses were performed using Sample SIB-SC-F37-3-4-09/03/2022. The following qualifiers were assigned:

ANALYTE	MS %R	MSD %R	RPD	QUALIFIER
OCDD	Parent > 4x Spike Conc.		31.4	J-MSP
1,2,3,4,6,7,8-HpCDD	50.9	-6.2	22.4	J-MSL,MSLX,MSP
OCDF	--	67.0	--	J-MSL

The MS/MSD analyses were performed using Sample SIB-SC-C-36-0-1-09/05/2022. The following qualifiers were assigned:

ANALYTE	MS %R	MSD %R	RPD	QUALIFIER
1,2,3,4,6,7,8-HpCDF	--	137	--	J-MSH

Certified Reference Material

Puget Sound Sediment Reference Material was analyzed with this SDG. All acceptance criteria were met.

Field Duplicates

For sediment samples, the RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL.

One set of field replicates SIB-SC-E37-2-3-08252022 & FD-52-08/25/2022, were submitted. The following qualifiers were assigned:

ANALYTE	OUTLIER TYPE	QUALIFIER
1,2,3,4,6,7,8-HpCDF	Difference	J-FDPA
1,2,3,4,6,7,8-HpCDD	RPD	J-FDPR
1,2,3,6,7,8-HxCDD	Difference	J-FDPA
OCDD	RPD	J-FDPR
Total HpCDD	RPD	J-FDPR
Total HpCDF	RPD	J-FDPR
Total HxCDF	RPD	J-FDPR
Total HxCDD	RPD	J-FDPR
Total PeCDF	Difference	J-FDPA
Total PeCDD	Difference	J-FDPA
Total TCDF	Difference	J-FDPA
Total TCDD	Difference	J-FDPA

One other field duplicate, FD-52-08/25/2022, was submitted. Data for the parent sample, SIB-SC-E37-2-3-08/25/2022, was not submitted to EcoChem for validation. Field precision for this field duplicate sample could not be evaluated.

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF positive results when using the DB5 GC column for analysis. The DB5 column cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. Although the laboratory used a DB-5MS column which more adequately separates TCDF isomers, the laboratory still performed a second column confirmation on a DB-225 column when 2,3,7,8-TCDF was detected, and the concentration was greater than the reporting limit. Both sets of results were reported. The 2,3,7,8-TCDF results from the DB-5MS column were qualified do-not-report (DNR-EXC) in favor of the results from the DB-225 column.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. These results were K-flagged by the laboratory. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were qualified (J-VJ).

Compound Quantitation

The laboratory flagged sample results with an "E" flag indicating the sample results exceeded the calibrated linear range of the instrument. These results were estimated (J-ACR).

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. With the exceptions noted above, accuracy was acceptable as demonstrated by the LCS/LCSD, labeled compound, SRM, and MS/MSD recoveries. With the exceptions noted above, precision was also acceptable as indicated by the LCS/LCSD, MS/MSD and field duplicate RPDs.

Data were estimated to indicate that EMPC values are estimated maximum possible concentrations. Detection limits were elevated due to method blank contamination. Data were also estimated due to MS/MSD accuracy and precision outliers, field duplicate precision outliers, as well as calibration range exceedances.

Data were flagged as do-not-report (DNR) to indicate which result from multiple reported analyses should not be used. Data that have been flagged DNR should not be used for any purpose.

All other data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r ² below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor

The following Stage 2A review was performed on the requested analyses. No results were rejected, and analytical completeness is 100%.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No completeness issues were noted.

Qualification: None required.

Sample Delivery and Condition – All samples arrived intact at the laboratory in acceptable condition and temperature and were properly preserved.

Qualification: None required.

Holding Times – All samples were prepared and analyzed within their required holding times.

Qualification: None required.

Method Blanks – The method 1668C method bank associated with batch 51448 was contaminated with the following PCBs; associated detections below the qualification threshold should be qualified U.

- PCB-3 was detected at 5.86 pg/g, leading to a qualification threshold of 29.3 pg/g
- PCB-11 was detected at 31.8 pg/g, leading to a qualification threshold of 159 pg/g
- PCB-20/28 was detected at 7.60 pg/g, leading to a qualification threshold of 38.0 pg/g
- PCB- 86/87/97/109/119/125 was detected at 8.14 pg/g, leading to a qualification threshold of 40.7 pg/g
- PCB-110/115 was detected at 7.20 pg/g, leading to a qualification threshold of 36.0 pg/g

The following results are qualified U-MBL:

- SIB-SC-B25-1-2-07/25/2022: PCB-11, PCB-110/115, PCB-20/28
- SIB-SC-B25-2-3-07/25/2022: PCB-86/87/97/109/119/125, PCB-110/115, PCB-20/28
- SIB-SC-B25-3-4-07/25/2022: PCB-11, PCB-86/87/97/109/119/125, PCB-110/115, PCB-20/28
- SIB-SC-B25-4-5-07/25/2022: PCB-11, PCB-86/87/97/109/119/125, PCB-110/115, PCB-20/28
- SIB-SC-B25-5-6-07/25/2022: PCB-11, PCB-86/87/97/109/119/125, PCB-110/115, PCB-20/28
- SIB-SC-D35-4-5-08/04/2022: PCB-11
- SIB-SC-D35-5-6-08/04/2022: PCB-11
- SIB-SC-D35-6-7-08/04/2022: PCB-11
- SIB-SC-D35-7-8-08/04/2022: PCB-11
- SIB-SC-D35-8-9-08/04/2022: PCB-11
- SIB-SC-D35-9-10-08/04/2022: PCB-11
- SIB-SC-D35-10-11-08/04/2022: PCB-11
- SIB-SC-D35-11-12-08/04/2022: PCB-11
- SIB-SC-D35-12-13-08/04/2022: PCB-11
- SIB-SC-D35-13-14-08/04/2022: PCB-11
- SIB-SC-D35-14-15-08/04/2022: PCB-11

The method 1668C method bank associated with batch 51518 was contaminated with many PCBs; this method blank is only associated with sample SIB-SC-D35-2-3-08/04/2022. The laboratory applies a B flag to all results that are <10x the concentration in the associated method blank. No results in sample SIB-SC-D35-2-3-08/04/2022 have a laboratory flag of B applied, indicating that all associated detections are greater than the qualification threshold and do not require qualification.

Qualification: Detections of contaminated compounds detected below the qualification threshold are qualified U, reason code MBL. Affected results are listed above.

Trip Blanks – A trip blank was not submitted with the samples in this SDG.

Qualification: None required.

Equipment Blanks – Equipment blank EB05-07262022 (results reported in SDG 20124) is associated with all sediment samples collected on 7.25.22. Due to the differences in mass extracted, the concentrations reported as pg/L in EBs correspond to the same concentration in pg/g in sediment samples. The following PCB congeners were detected in the EBs (does not include PCB congeners considered to be analytical artifacts based on corresponding detections in the associated aqueous MBs). Note that EB contamination is not adjusted for dilution when comparing to sample results.

PCB Congener	Concentration (pg/L)	Soil-equivalent Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-3	3.66	3.66	18.3
PCB-4	12.1	12.1	60.5
PCB-8	12.4	12.4	62.0
PCB-16	5.45	5.45	27.25
PCB-17	5.38	5.38	26.9

PCB Congener	Concentration (pg/L)	Soil-equivalent Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-18/30	12.4	12.4	62.0
PCB-20/28	11.9	11.9	59.5
PCB-21/33	6.41	6.41	32.05
PCB-22	5.47	5.47	27.35
PCB-26/29	3.52	3.52	17.6
PCB-31	12.1	12.1	60.5
PCB-32	3.95	3.95	19.75
PCB-37	3.27	3.27	16.35
PCB-40/71	4.91	4.91	24.55
PCB-44/47/65	12.0	12.0	60.0
PCB-45/51	3.41	3.41	17.05
PCB-49/69	5.65	5.65	28.25
PCB-50/53	2.89	2.89	14.45
PCB-52	13.5	13.5	67.25
PCB-66	5.70	5.70	28.5
PCB-86/87/97/109/119/125	8.95	8.95	44.75
PCB-95	10.3	10.3	51.5
PCB-99	4.13	4.13	20.65
PCB-105	4.44	4.44	22.2
PCB-110/115	11.8	11.8	59.0
PCB-118	8.48	8.48	42.4
PCB-135/151	3.86	3.86	19.3
PCB-147/149	6.55	6.55	32.75
PCB-187	3.72	3.72	18.6

The following results were qualified U-EBL due to contamination in EB05-07262022

- SIB-SC-B25-1-2-07/25/2022: PCB-8, PCB-20/28, PCB-110/115, PCB-118
- SIB-SC-B25-2-3-07/25/2022: PCB-8, PCB-18/30, PCB-20/28, PCB-86/87/97/109/119/125, PCB-110/115, PCB-118, PCB-135/151, PCB-147/149
- SIB-SC-B25-3-4-07/25/2022: PCB-20/28, PCB-86/87/97/109/119/125, PCB-110/115
- SIB-SC-B25-4-5-07/25/2022: PCB-4, PCB-8, PCB-20/28, PCB-86/87/97/109/119/125, PCB-110/115, PCB-118, PCB-135/151, PCB-147/149
- SIB-SC-B25-5-6-07/25/2022: PCB-8, PCB-17, PCB-18/30, PCB-20/28, PCB-21/33, PCB-31, PCB-32, PCB-44/47/65, PCB-45/51, PCB-50/53, PCB-86/87/97/109/119/125, PCB-95, PCB-110/115, PCB-118, PCB-147/149

Equipment blank EB06-08042022 (results reported in SDG 20186) is associated with all sediment samples collected on 8.4.22. Due to the differences in mass extracted, the concentrations reported as pg/L in EBs correspond to the same concentration in pg/g in sediment samples. The following PCB congeners were detected in the EBs (does not include PCB congeners considered to be analytical artifacts based on corresponding detections in the associated aqueous MBs). Note that EB contamination is not adjusted for dilution when comparing to sample results.

PCB Congener	Concentration (pg/L)	Soil-equivalent Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-4	31.9	31.9	159.5
PCB-6	10.6	10.6	53
PCB-8	37.9	37.9	189.5
PCB-16	11.4	11.4	57
PCB-17	10.5	10.5	52.5

PCB Congener	Concentration (pg/L)	Soil-equivalent Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-18/30	24	24	120
PCB-19	4.68	4.68	23.4
PCB-32	7.78	7.78	38.9
PCB-40/71	4.47	4.47	22.35
PCB-99	5.83	5.83	29.15
PCB-132	3.9	3.9	18.5
PCB-184	3.28	3.28	16.4

The following results were qualified U-EBL due to contamination in EB06-08042022

- SIB-SC-D35-1-2-08/04/2022: PCB-4
- SIB-SC-D35-2-3-08/04/2022: PCB-184

Ambient Blanks – An ambient blank was not submitted with this SDG.

Qualification: None required.

Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) – All LCS/LCSD %Rs and RPDs were within QAPP control limits.

Qualification: None required.

Surrogates – All surrogates (EISs) were within QAPP control limits.

Qualification: None required.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) – MS/MSD analysis was performed on sample SIB-SC-B25-1-2-07/25/2022. All %Rs and RPDs were within QAPP control limits.

Qualification: None required.

Field Duplicate – A field duplicate was not submitted with the samples in this SDG.

Qualification: None required.

Laboratory Duplicate – A laboratory duplicate was not performed in this SDG.

Qualification: None required.

Compound Quantitation – Analyte non-detections were reported as ND with the associated DL, LOD, and LOQ included on the result summary pages. This reporting format is equivalent to reporting non-detected data in the DoD “LOD U” format. Analytes detected between the DL and LOQ were reported as J-qualified results by the laboratory. These J qualifiers were retained unless superseded by a more severe qualifier.

If a detected analyte has an ion ratio outside the characteristic ion ratio window, the result is reported as an estimated maximum potential concentration. All results reported as an EMPC are qualified J-EMPC unless superseded by a higher priority qualifier.

Qualification: None required.

Qualification Summary Table (results in pg):

The following Stage 2A review was performed on the requested analyses. No results were rejected, and analytical completeness is 100%.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No completeness issues were noted.

Qualification: None required.

Sample Delivery and Condition – All samples arrived intact at the laboratory in acceptable condition and temperature and were properly preserved.

Qualification: None required.

Holding Times – All samples were prepared and analyzed within their required holding times.

Qualification: None required.

Method Blanks – The method 1668C method blank was contaminated with the following PCBs; associated detections below the qualification threshold should be qualified U.

- PCB-11 was detected at 17.5 pg/g, leading to a qualification threshold of 87.5 pg/g

- PCB-17 was detected at 2.98 pg/g, leading to a qualification threshold of 14.9 pg/g
- PCB-19 was detected at 2.96 pg/g, leading to a qualification threshold of 14.8 pg/g
- PCB-20/28 was detected at 3.82 pg/g, leading to a qualification threshold of 19.1 pg/g
- PCB-21/33 was detected at 3.14 pg/g, leading to a qualification threshold of 15.7 pg/g
- PCB-31 was detected at 2.44 pg/g, leading to a qualification threshold of 12.2 pg/g
- PCB-32 was detected at 1.94 pg/g, leading to a qualification threshold of 9.70 pg/g
- PCB-44/47/65 was detected at 5.54 pg/g, leading to a qualification threshold of 27.7 pg/g
- PCB-45/51 was detected at 2.32 pg/g, leading to a qualification threshold of 11.6 pg/g
- PCB-52 was detected at 4.36 pg/g, leading to a qualification threshold of 21.8 pg/g
- PCB-61/70/74/76 was detected at 7.26 pg/g, leading to a qualification threshold of 36.3 pg/g
- PCB-66 was detected at 3.00 pg/g, leading to a qualification threshold of 15.0 pg/g
- PCB-77 was detected at 3.04 pg/g, leading to a qualification threshold of 15.2 pg/g
- PCB- 86/87/97/109/119/125 was detected at 6.20 pg/g, leading to a qualification threshold of 31.0 pg/g
- PCB-90/101/113 was detected at 5.20 pg/g, leading to a qualification threshold of 26.0 pg/g
- PCB-95 was detected at 4.42 pg/g, leading to a qualification threshold of 22.1 pg/g
- PCB-99 was detected at 2.56 pg/g, leading to a qualification threshold of 12.8 pg/g
- PCB-110/115 was detected at 5.78 pg/g, leading to a qualification threshold of 28.9 pg/g
- PCB-118 was detected at 5.22 pg/g, leading to a qualification threshold of 26.1 pg/g
- PCB-128/166 was detected at 2.22 pg/g, leading to a qualification threshold of 11.1 pg/g
- PCB-129/138/163 was detected at 5.52 pg/g, leading to a qualification threshold of 27.6 pg/g
- PCB-135/151 was detected at 2.12 pg/g, leading to a qualification threshold of 10.6 pg/g
- PCB-147/149 was detected at 3.32 pg/g, leading to a qualification threshold of 16.6 pg/g
- PCB-153/168 was detected at 4.22 pg/g, leading to a qualification threshold of 21.1 pg/g
- PCB-156/157 was detected at 4.44 pg/g, leading to a qualification threshold of 22.2 pg/g
- PCB-167 was detected at 1.92 pg/g, leading to a qualification threshold of 9.60 pg/g
- PCB-169 was detected at 2.04 pg/g, leading to a qualification threshold of 10.1 pg/g
- PCB-174 was detected at 1.88 pg/g, leading to a qualification threshold of 9.90 pg/g
- PCB-179 was detected at 1.14 pg/g, leading to a qualification threshold of 5.70 pg/g
- PCB-180/193 was detected at 3.38 pg/g, leading to a qualification threshold of 16.9 pg/g
- PCB-187 was detected at 2.06 pg/g, leading to a qualification threshold of 10.3 pg/g
- PCB-189 was detected at 2.12 pg/g, leading to a qualification threshold of 10.6 pg/g
- PCB-194 was detected at 2.58 pg/g, leading to a qualification threshold of 12.9 pg/g
- PCB-198/199 was detected at 2.52 pg/g, leading to a qualification threshold of 12.6 pg/g

The following results are qualified U-MBL:

- SIB-SC-E23-4-5-08/17/2022: PCB-11
- SIB-SC-E23-5-6-08/17/2022: PCB-11
- SIB-SC-B23-1-2-08/20/2022: PCB-11, PCB-174, PCB-79, PCB-180/193, PCB-187, PCB-128/166, PCB-129/138/163, PCB-135/151, PCB-147/149, PCB-153/168, PCB-156/157, PCB-86/87/97/109/119/125, PCB-90/101/113, PCB-95, PCB-99, PCB-110/115, PCB-118, PCB-61/70/74/76, PCB-44/47/65, PCB-45/51, PCB-52, PCB-66, PCB-17, PCB-19, PCB-20/28, PCB-21/33, PCB-31
- SIB-SC-B23-2-3-08/20/2022: PCB-174, PCB-179, PCB-180/193, PCB-187, PCB-129/138/163, PCB-135/151, PCB-147/149, PCB-153/168, PCB-156/157, PCB-194, PCB-198/199, PCB-167, PCB-86/87/97/109/119/125, PCB-90/101/113, PCB95, PCB-99, PCB-110/115, PCB-118, PCB-61/70/74/76, PCB-44/47/65, PCB-45/51, PCB-52, PCB-66, PCB-17, PCB-19, PCB-20/28, PCB-21/33, PCB-31, PCB-32

- SIB-SC-D35-5-6-08/04/2022: PCB-11, PCB-174, PCB-180/193, PCB-187, PCB-189, PCB-129/138/163, PCB-135/151, PCB-147/149, PCB-153/168, PCB-156/157, PCB-169, PCB-194, PCB-198/199, PCB-167, PCB-86/87/97/109/119/125, PCB-90/101/113, PCB-95, PCB-110/115, PCB-118, PCB-61/70/74/76, PCB-44/47/65, PCB-45/51, PCB-52, PCB-66, PCB-20/28, PCB-21/33, PCB-31
- SIB-SC-D35-6-7-08/04/2022: PCB-11, PCB-174, PCB-179, PCB-180/193, PCB-187, PCB-128/166, PCB-129/138/163, PCB-135/151, PCB-147/149, PCB-153/168, PCB-156/157, PCB-194, PCB-198/199, PCB-167, PCB-86/87/97/109/119/125, PCB-90/101/113, PCB-95, PCB-99, PCB-110/115, PCB-118, PCB-61/70/74/76, PCB-44/47/65, PCB-45/51, PCB-52, PCB-66, PCB-17, PCB-20/28, PCB-21/33, PCB-31, PCB-32

Qualification: Detections of contaminated compounds detected below the qualification threshold are qualified U, reason code MBL. Affected results are listed above.

Trip Blanks – A trip blank was not submitted with the samples in this SDG.

Qualification: None required.

Equipment Blanks – Equipment blank EB08-08212022 (results reported in SDG 20282) is associated with all samples in this SDG. Due to the differences in mass extracted, the concentrations reported as pg/L in EBs correspond to the same concentration in pg/g in sediment samples. The following PCB congeners were detected in the EBs (does not include PCB congeners considered to be analytical artifacts based on corresponding detections in the associated aqueous MBs). Note that EB contamination is not adjusted for dilution when comparing to sample results.

PCB Congener	Concentration (pg/L)	Soil-equivalent Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-4	31.7	31.7	158.5
PCB-8	43.3	43.3	216.5
PCB-16	16.7	16.7	83.5
PCB-17	11.0	11.0	55.0
PCB-18/30	14.9	14.9	74.5
PCB-19	6.66	6.66	33.3
PCB-27	2.99	2.99	14.95
PCB-32	8.12	8.12	40.6
PCB-35	5.6	5.6	28
PCB-40/71	8.22	8.22	41.1
PCB-42	5.46	5.46	27.3
PCB-48	5.08	5.08	25.4
PCB-84	8.55	8.55	42.75
PCB-92	6.32	6.32	31.6
PCB-99	12.5	12.5	62.5

PCB Congener	Concentration (pg/L)	Soil-equivalent Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-132	4.77	4.77	23.85
PCB-174	2.39	2.39	11.95
PCB-179	1.32	1.32	6.6
PCB-183/185	2.11	2.11	10.55

The following results were qualified U-EBL due to contamination in EB08-08212022

- SIB-SC-F23-1-2-08/17/2022: PCB-4, PCB-8, PCB-16, PCB-35
- SIB-SC-F23-2-3-08/17/2022: PCB-4, PCB-8, PCB-16, PCB-35
- SIB-SC-F23-3-4-08/17/2022: PCB-4, PCB-8, PCB-16, PCB-35
- SIB-SC-F23-4-5-08/17/2022: PCB-8, PCB-16, PCB-35
- SIB-SC-F23-5-6-08/17/2022: PCB-35
- SIB-SC-B23-1-2-08/20/2022: PCB-8, PCB-17, PCB-18/30, PCB-19, PCB-27, PCB-40/71, PCB-84, PCB-92, PCB-99, PCB-132, PCB-174, PCB-179, PCB-183/185
- SIB-SC-B23-2-3-08/20/2022: PCB-4, PCB-17, PCB-18/30, PCB-19, PCB-27, PCB-32, PCB-40/71, PCB-99, PCB-132, PCB-174, PCB-179
- SIB-SC-B23-3-4-08/20/2022: PCB-17, PCB-18/30, PCB-19, PCB-27, PCB-32, PCB-40/71, PCB-84, PCB-92, PCB-99, PCB-132, PCB-174, PCB-179
- SIB-SC-B23-4-5-08/20/2022: PCB-8, PCB-17, PCB-18/30, PCB-19, PCB-27, PCB-32, PCB-99, PCB-132, PCB-174, PCB-179
- SIB-SC-B23-5-6-08/20/2022: PCB-18/30, PCB-27, PCB-174
- FD-48-08/20/2022: PCB-17, PCB-18/30, PCB-27, PCB-32, PCB-99, PCB-132, PCB-174, PCB-179, PCB-183/185

Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) – All LCS/LCSD %Rs and RPDs were within QAPP control limits.

Qualification: None required.

Surrogates – All surrogates (EISs) were within QAPP control limits.

Qualification: None required.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) – MS/MSD analysis was performed on sample SIB-SC-B23-2-3-08/20/2022. All %Rs and RPDs were within QAPP control limits.

Qualification: None required.

Field Duplicate – Sample FD-48-08/20/2022 was submitted as a field duplicate of sample SIB-SC-B23-1-2-08/20/2022. All precision criteria were met.

Qualification: None required.

Laboratory Duplicate – A laboratory duplicate was not performed in this SDG.

Qualification: None required.

Compound Quantitation – Analyte non-detections were reported as ND with the associated DL, LOD, and LOQ included on the result summary pages. This reporting format is equivalent to reporting non-detected data in the DoD “LOD U” format. Analytes detected between the DL and LOQ were reported as J-qualified results by the laboratory. These J qualifiers were retained unless superseded by a more severe qualifier.

If a detected analyte has an ion ratio outside the characteristic ion ratio window, the result is reported as an estimated maximum potential concentration. All results reported as an EMPC are qualified J-EMPC unless superseded by a higher priority qualifier.

Qualification: None required.

Qualification Summary Table (results in pg):

Sample	Analyte	Lab Value	Lab Qualifier	Validated Value	Validated Qualifier	Reason Code
SIB-SC-E23-1-2-08/17/2022	2,6-DICHLOROBIPHENYL (10)	77.2	JK	77.2	J	EMPC

DATA VALIDATION REPORT

HGL – SWAN ISLAND BASIN

Prepared for:

HydroGeoLogic, Inc
11107 Sunset Hills Rd. Suite 400
Reston, VA 20190

Prepared by:

EcoChem, Inc.
500 Union Street, Suite 1010
Seattle, WA 98101

EcoChem Project: C28601-1

SDG: 20474

May 25, 2023

Approved for Release:

A handwritten signature in black ink, appearing to read "Michela Hernandez". The signature is written in a cursive style and is positioned above a horizontal line.

Michela Hernandez
Senior Project Chemist
EcoChem, Inc.

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of compliance review (EPA Stage 2A) performed on sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
PCB Congeners	E1668	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, November 2020).

EcoChem’s goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

PCB Congeners by EPA 1668C

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory and field quality control (QC) samples. All data received a compliance screening level of review (EPA Stage 2A). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the Sample Index for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
20474	22 Sediment	Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

For 18 samples, the date suffix in the sample ID is expressed as DDMMYYYY instead of DD/MM/YYYY in the "sample_name" field. All sample IDs in the "sys_sample_code" field match the chain-of-custody (COC).

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	1	Certified Reference Material
2	Laboratory Blanks	1	Field Duplicates
1	Field Blanks	✓	Target Analyte List
✓	Labeled Compound Recovery	1	Reporting Limits
2	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	2	Compound Identification
✓	Laboratory Control Samples (LCS/LCSD)	✓	Compound Quantitation

✓ *Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.*

¹ *Quality control results are discussed below, but no data were qualified.*

² *Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.*

Sample Receipt, Preservation, and Holding Times

For Sample FD-52-08/25/2022, the collection date on the chain-of-custody (COC) of 8/25/2022 was listed as 8/24/2022 on the container label. The COC information was used for login purposes.

For Samples SIB-SC-B33-1-2-08/21/2022 and SIB-SC-B33-4-5-08/21/2022, the containers arrived with cracked lids. Container integrity was maintained. No action was taken.

The following samples had a collection date of 9/2/2022 on the COC but was listed as 9/3/2022 on the container labels. The client confirmed that the 9/3/2022 date was correct.

- SIB-SC-F37-2-3-09/03/2022
- SIB-SC-F37-3-4-09/03/2022
- SIB-SC-F37-4-5-09/03/2022
- SIB-SC-F37-5-5.9-09/03/2022

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned K-flags to values when a peak was detected but did not meet identification criteria. These values are considered positive identifications which are "estimated maximum possible concentrations" or EMPC. When these occurred in the method blank the results were evaluated as positive results. When these occurred in the associated samples, any EMPC values that were less than the method blank action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. Various target analytes were detected in the method blanks, however only the following analytes required qualification in one or more samples:

Extraction Batch 51566: The following field sample results were qualified as not detected:

Extraction Batch 51615: The following field sample results were qualified as not detected:

CLIENT ID	ANALYTE	QUALIFIER
FD-54-09/03/2022	PCB-19	U-MBL
	PCB-205	U-MBL
	PCB-189	U-MBL
	PCB-32	U-MBL
	PCB-77	U-MBL
	PCB-11	U-MBL

Field Blanks

Equipment rinsate blanks associated with sediment cores were submitted separately from the associated field samples. Based on review of the table of equipment blank associations, equipment blanks EB08-08212022, EB09-08242022, and EB10-09052022 are associated with the samples with results reported in this SDG; results for these EB were reported in CFA SDGs 20282 and 20341. Several results were detected in EB08-08212022 and EB09-08242022, however; no data were qualified based on field blank contamination. EB10-09052022 was free of contamination.

Matrix Spike/Matrix Spike Duplicates

Sample SIB-SC-F37-3-4-09/03/2022 was used for the matrix spike/matrix spike duplicate (MS/MSD) analyses. The MSD recovery values for PCB-202, PCB-206, and PCB-208 were greater than the upper control limit but were in control in the associated MS sample; associated parent sample results were estimated (J-MSH). The relative percent difference (RPD) values for PCB-202, PCB-206, and PCB-208 were greater than the control limit; associated results in the parent were estimated (J-MSP).

Certified Reference Material

No certified reference materials were analyzed.

Field Duplicates

For sediment samples, the RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL.

Two sets of field duplicates were submitted:

- SIB-SC-E37-2-3-08/25/2022 & FD-52-08/25/2022. Field precision was acceptable.
- SIB-SC-F37-1-2-09/03/2022 & FD-54-09/03/2022. Field precision was acceptable.

Reporting Limits

The laboratory practical quantitation limits (PQL) were greater than those provided in the QAPP. Although some individual congeners were reported as not detected at elevated detection limits, the overall total PCB concentrations for most samples were greater than the site CUL.

Compound Identification

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. These results were K-flagged by the laboratory. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were qualified (J-VJ).

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. With the exceptions noted above, accuracy was acceptable as demonstrated by the labeled compound, LCS/LCSD, and MS/MSD recoveries. With the exceptions noted above, precision was also acceptable as reported by the LCS/LCSD, MS/MSD, and field duplicate RPD values.

Data were qualified as not detected due to method blank contamination. Data were estimated to indicate that EMPC values are estimated maximum possible concentrations. Data were also estimated due to MS/MSD accuracy and precision outliers.

All data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r ² below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

QC Element	Reason Code	Definition
Low-Level Calibration Check	LLCH	Low-level calibration check above the upper limit
Low-Level Calibration Check	LLCL	Low-level calibration check below the lower limit
Low-Level Calibration Check	LLXL	Low-level calibration check below the lower limit, extreme discrepancy
Method Blank	MBH	Method blank result \geq LOQ
Method Blank	MBHB	Result is judged to be biased high based on associated method blank result
Method Blank	MBL	Method blank result $<$ LOQ
Matrix Spike	MSH	MS and/or MSD %R above acceptance criterion
Matrix Spike	MSL	MS and/or MSD %R below acceptance criterion
Matrix Spike	MSLX	MS and/or MSD %R below acceptance criterion, extreme discrepancy
Matrix Spike	MSP	MS/MSD RPD above acceptance criterion
Post-Digestion Spike	PDH	Post-digestion spike recovery high
Post-Digestion Spike	PDL	Post-digestion spike recovery low
Post-Digestion Spike	PDLX	Post-digestion spike recovery low, extreme discrepancy
Post-Digestion Spike	PDN	Post-digestion spike not performed or not applicable and serial dilution result not performed or not applicable
Sample Delivery and Condition	BUB	Bubbles $>$ 5 millimeters in volatile organic compounds vial
Sample Delivery and Condition	DAM	Sample container damaged
Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor

The following Stage 2A review was performed on the requested analyses. No results were rejected, and analytical completeness is 100%.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No completeness issues were noted.

Qualification: None required.

Sample Delivery and Condition – All samples arrived intact at the laboratory in acceptable condition and temperature and were properly preserved. No other discrepancies were noted.

Qualification: None required.

Holding Times – All samples were prepared and analyzed within their required holding times.

Qualification: None required.

Method Blanks – The method 1613B method bank associated with batch 51662 was contaminated with 2.15 pg/g of 1,2,3,4,6,7,8,9-OCDD, leading to a qualification limit of 10.75 pg/g. The detections of 1,2,3,4,6,7,8,9-OCDD in all associated samples are greater than the qualification limit and no qualification is required. The method 1613B method bank associated with batch 51662 was contaminated with 0.454 pg/g of 1,2,3,4,6,7,8,9-OCDD and 0.242 pg/g of 1,2,3,4,6,7,8-HpCDF, leading to qualification limits of 2.27 pg/g and 1.21 pg/g, respectively. The detections of 1,2,3,4,6,7,8,9-OCDD and 1,2,3,4,6,7,8-HpCDF in the associated sample are greater than the qualification limit and no qualification is required.

Qualification: None required.

Rinsate Blanks – Rinse blank EB05-07/26/2022 (results reported in SDG 20123) is associated with all samples in this SDG that were sampled on 7/25/22 and was free from contamination. Rinse blank EB06-08/04/2022 (results reported in SDG 20187) is associated with all samples in this SDG that were sampled on 8/2/2022. The rinsate blank was contaminated with multiple PCDD/PCDF compounds; however, all detected results in this EB were not substantially different from those reported in the method blank associated with this EB. The detected results reported for EB06-08/04/2022 represent contamination associated with aqueous sample preparation and are not related to cross-contamination in the field. No additional qualification is required.

Qualification: None required.

Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) – All LCS/LCSD %Rs and RPDs were within QAPP control limits with one exception. The LCS in batch 51663 yielded a low recovery for 1,2,3,7,8-PeCDF. Only one sample is associated with this LCS, and the 1,2,3,7,8-PeCDF result should be qualified J-LCSL.

***Qualification:* The 1,2,3,7,8-PeCDF result in sample SIB-SC-D14-5-6-08/02/2022 is qualified J-LCSL.**

Surrogates – All surrogates (labeled standards) were within control limits with one exception. In sample SIB-SC-C12-2-3-07/25/2022, surrogate 13C-1,2,3,6,7,8-HxCDF recovered above control limits. Detections of analytes associated with this surrogate should be qualified J-LSH, while non-detects require no qualification.

***Qualification:* The detected result for 1,2,3,6,7,8-HxCDF in sample SIB-SC-C12-2-3-07/25/2022 is qualified J-LSH.**

Matrix Spike/Matrix Spike Duplicate (MS/MSD) – An MS/MSD was performed using sample SIB-SC-D13-2-3-08/02/2022. All %Rs were within QAPP control limits, with the exception of 1,2,3,4,6,7,8-HpCDD and 1,2,3,4,6,7,8,9-OCDD, which recovered below control limits in the MS and MSD, but the sample concentrations were >4x the spike concentration and the %R results are not applicable. Additionally, 1,2,3,4,6,7,8,9-OCDF recovered below control limits in the MSD and this result in sample SIB-SC-D13-2-3-08/02/2022 is qualified J-MSL. All RPDs were within QAPP control limits.

***Qualification:* For sample SIB-SC-D13-2-3-08/02/2022, the 1,2,3,4,6,7,8,9-OCDF result is qualified J-MSL.**

Field Duplicate – Sample FD-23-08/02/2022 was submitted as a field duplicate of sample SIB-SC-D13-1-2-08/02/2022. All precision criteria were met with the exception of 1,2,3,4,7,8-HxCDF, which failed absolute difference criteria. These results in the parent and field duplicate should be qualified J-FDPA.

***Qualification:* The 1,2,3,4,7,8-HxCDF results in samples FD-23-08/02/2022 and SIB-SC-D13-1-2-08/02/2022 are qualified J-FDPA.**

Compound Quantitation – Analyte non-detections were reported as the EDL and qualified U. Analytes detected between the EDL and PQL were reported as J-qualified results by the laboratory. These J qualifiers were retained unless superseded by a more severe qualifier.

If a detected analyte has an ion ratio outside the characteristic ion ratio window, the result is reported as an estimated maximum potential concentration. All results reported as an EMPC (a “K” flag is present in the laboratory qualifier) are qualified J-EMPC unless superseded by a higher priority qualifier.

2,3,7,8-TCDF is not fully resolved on the DB-5MS column; when detected above the PQL on the DB-5MS column, the result was confirmed on a DB-225 column using the instrument ID listed in the case narrative. In cases where two results are reported for 2,3,7,8-TCDF for a sample, the result from the DB-225 column is selected for use and the result from the DB-5MS is qualified DNR-EXC.

In cases where a target analyte is detected at a concentration above the calibrated range, the laboratory’s practice is to report the result with a laboratory qualifier of E without running a dilution so long as the detector is not saturated. The OCDD results for 8 affected samples are qualified J-ACR.

Qualification: The following results are qualified:

- All results reported with a laboratory qualifier of K are qualified J with reason code EMPC.
- All 2,3,7,8-TCDF results reported from the DB-5MS column that are paired with a 2,3,7,8-TCDF result from the DB-225 column are qualified DNR, reason code EXC; ; note that the reportable_result field for these results are populated with “Yes” by the laboratory and are changed to “No” for the affected results.
- 8 OCDD results reported with a laboratory qualifier of E are qualified J with reason code ACR; note that the reportable_result field for these results are populated with “No” by the laboratory and are changed to “Yes” for the affected results.
- Three Heptachloro-p-dioxin results reported with a laboratory qualifier of E have the reportable_result field populated with “No” by the laboratory and is changed to “Yes”. Although total congener results are not validated, these results are reportable.

Qualification Summary Table (results in pg/g):

Sample	Analyte	Lab Value	Lab Qualifier	Validated Value	Validated Qualifier	Reason Code

DATA VALIDATION REPORT

HGL – SWAN ISLAND BASIN

Prepared for:

HydroGeoLogic, Inc
11107 Sunset Hills Rd. Suite 400
Reston, VA 20190

Prepared by:

EcoChem, Inc.
500 Union Street, Suite 1010
Seattle, WA 98101

EcoChem Project: C28601-1

SDG: 20480

May 16, 2023

Approved for Release:

A handwritten signature in black ink, appearing to read "Michela Hernandez". The signature is written in a cursive style and is positioned above a horizontal line.

Michela Hernandez
Senior Project Chemist
EcoChem, Inc.

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of compliance review (EPA Stage 2A) performed on sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Dioxins/Furans	E1613B	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, November 2020).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

Dioxin/Furan Compounds by EPA 1613B

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory and field quality control (QC) samples. All data received a compliance screening level of review (EPA Stage 2A). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES AND MATRIX	VALIDATION LEVEL
20480	15 Sediment	Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

For thirteen (13) samples, the date suffix in the sample ID is expressed as DDMMYYYY instead of DD/MM/YYYY in the "sample_name" field. All sample IDs in the "sys_sample_code" field match the chain-of-custody.

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table.

✓	Sample Receipt, Preservation, and Holding Times	1	Certified Reference Material
1	Laboratory Blanks	1	Field Duplicates
1	Field Blanks	✓	Target Analyte List
✓	Labeled Compound Recovery	✓	Reporting Limits
✓	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	2	Compound Identification
✓	Laboratory Control Samples (LCS/LCSD)	2	Compound Quantitation

✓ Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned K-flags to values when a peak was detected but did not meet identification criteria. These values are considered positive identifications which are "estimated maximum possible concentrations" or EMPC. When these occurred in the method blank the results were evaluated as positive results. When these occurred in the associated samples, any EMPC values that were less than the method blank action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. There was a positive result for OCDD in the method blank. All associated field sample results were greater than the 5x action level; no data were qualified.

Field Blanks

Equipment rinsate blanks associated with sediment cores were submitted separately from the associated field samples. Based on review of the table of equipment blank associations, equipment blank EB07-08092022 is associated with the samples with results reported in this SDG; results for this EB were reported in CFA SDG 20187. EB07-08092022 was free from all contamination.

Certified Reference Material

Puget Sound Sediment Reference Material was analyzed with this SDG. All acceptance criteria were met.

Field Duplicates

For sediment samples, the relative percent difference (RPD) control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL.

One set of field replicates SIB-SC-E22-9-10-08/09/2022 & FD-32-08/09/2022, were submitted. Field precision was acceptable.

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF positive results when using the DB5 GC column for analysis. The DB5 column cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. Although the laboratory used a DB-5MS column which more adequately separates TCDF isomers, the laboratory still performed a second column confirmation on a DB-225 column when 2,3,7,8-TCDF was detected, and the concentration was greater than the reporting limit. Both sets of results were reported. The 2,3,7,8-TCDF results from the DB-5MS column were qualified do-not-report (DNR-EXC) in favor of the results from the DB-225 column.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. These results were K-flagged by the laboratory. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were qualified (J-VJ).

Compound Quantitation

The laboratory flagged sample results with an "E" flag indicating the sample results exceeded the calibrated linear range of the instrument. These results were estimated (J-ACR).

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. Accuracy was acceptable as demonstrated by the LCS/LCSD, labeled compound, SRM, and MS/MSD recoveries. Precision was also acceptable as indicated by the LCS/LCSD, MS/MSD and field duplicate RPDs.

Data were estimated to indicate that EMPC values are estimated maximum possible concentrations. Data were estimated due to calibration range exceedances.

Data were flagged as do-not-report (DNR) to indicate which result from multiple reported analyses should not be used. Data that have been flagged DNR should not be used for any purpose.

All other data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r^2 below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

QC Element	Reason Code	Definition
Low-Level Calibration Check	LLCH	Low-level calibration check above the upper limit
Low-Level Calibration Check	LLCL	Low-level calibration check below the lower limit
Low-Level Calibration Check	LLXL	Low-level calibration check below the lower limit, extreme discrepancy
Method Blank	MBH	Method blank result \geq LOQ
Method Blank	MBHB	Result is judged to be biased high based on associated method blank result
Method Blank	MBL	Method blank result $<$ LOQ
Matrix Spike	MSH	MS and/or MSD %R above acceptance criterion
Matrix Spike	MSL	MS and/or MSD %R below acceptance criterion
Matrix Spike	MSLX	MS and/or MSD %R below acceptance criterion, extreme discrepancy
Matrix Spike	MSP	MS/MSD RPD above acceptance criterion
Post-Digestion Spike	PDH	Post-digestion spike recovery high
Post-Digestion Spike	PDL	Post-digestion spike recovery low
Post-Digestion Spike	PDLX	Post-digestion spike recovery low, extreme discrepancy
Post-Digestion Spike	PDN	Post-digestion spike not performed or not applicable and serial dilution result not performed or not applicable
Sample Delivery and Condition	BUB	Bubbles $>$ 5 millimeters in volatile organic compounds vial
Sample Delivery and Condition	DAM	Sample container damaged
Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor

EcoChem, Inc.

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of compliance review (EPA Stage 2A) performed on sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Dioxins/Furans	E1613B	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, November 2020).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

Dioxin/Furan Compounds by EPA 1613B

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory and field quality control (QC) samples. All data received a compliance screening level of review (EPA Stage 2A). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES AND MATRIX	VALIDATION LEVEL
20483	17 Sediment	Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

For five (5) samples, the date suffix in the sample ID is expressed as DDMMYYYY instead of DD/MM/YYYY in the "sample_name" field. All sample IDs in the "sys_sample_code" field match the chain-of-custody.

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table.

✓	Sample Receipt, Preservation, and Holding Times	1	Certified Reference Material
2	Laboratory Blanks	1	Field Duplicates
1	Field Blanks	✓	Target Analyte List
✓	Labeled Compound Recovery	✓	Reporting Limits
✓	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	2	Compound Identification
✓	Laboratory Control Samples (LCS/LCSD)	2	Compound Quantitation

✓ Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned K-flags to values when a peak was detected but did not meet identification criteria. These values are considered positive identifications which are "estimated maximum possible concentrations" or EMPC. When these occurred in the method blank the results were evaluated as positive results. When these occurred in the associated samples, any EMPC values that were less than the method blank action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. The following field sample results were qualified as not detected:

CLIENT ID	ANALYTE	QUALIFIER
SIB-SC-B22-2-3-08/20/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
SIB-SC-B22-3-4-08/20/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
	1,2,3,4,6,7,8-HpCDD	U-MBL
	1,2,3,4,7,8-HxCDF	U-MBL
	OCDF	U-MBL
SIB-SC-B22-4-5-08/20/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
FD-47-08/20/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
SIB-SC-B18-0-1-08/20/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
SIB-SC-B18-1-2-08/20/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
SIB-SC-B18-3-4-08/20/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
SIB-SC-B18-4-5-08/20/2022	1,2,3,4,6,7,8-HpCDD	U-MBL
SIB-SC-B18-5-6-08/20/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
	1,2,3,4,6,7,8-HpCDD	U-MBL
SIB-SC-C20-4-5-08/24/2022	1,2,3,7,8-PeCDD	U-MBL

Field Blanks

Equipment rinsate blanks associated with sediment cores were submitted separately from the associated field samples. Based on review of the table of equipment blank associations, equipment blanks EB08-08212022 and EB09-08242022 are associated with the samples with results reported in this SDG; results for these EB were reported in CFA SDG 20283. EB08-08212022 and EB09-08242022 were not evaluated as SDG 20283 was not submitted to EcoChem for review.

Certified Reference Material

Puget Sound Sediment Reference Material was analyzed with this SDG. All acceptance criteria were met.

Field Duplicates

For sediment samples, the relative percent difference (RPD) control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL.

One set of field replicates SIB-SC-B22-1-2-08/20/2022 and FD-47-08/20/2022, was submitted. Field precision was acceptable.

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF positive results when using the DB5 GC column for analysis. The DB5 column cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. Although the laboratory used a DB-5MS column which more adequately separates TCDF isomers, the laboratory still performed a second column confirmation on a DB-225 column when 2,3,7,8-TCDF was detected, and the concentration was greater than the reporting limit. Both sets of results were reported. The 2,3,7,8-TCDF results from the DB-5MS column were qualified do-not-report (DNR-EXC) in favor of the results from the DB-225 column.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. These results were K-flagged by the laboratory. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were qualified (J-VJ).

Compound Quantitation

The laboratory flagged sample results with an "E" flag indicating the sample results exceeded the calibrated linear range of the instrument. These results were estimated (J-ACR).

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. Accuracy was acceptable as demonstrated by the LCS/LCSD, labeled compound, SRM, and MS/MSD recoveries. Precision was also acceptable as indicated by the LCS/LCSD, MS/MSD and field duplicate RPD values.

Data were estimated to indicate that EMPC values are estimated maximum possible concentrations. Detection limits were elevated due to method blank contamination. Data were estimated due to calibration range exceedances.

Data were flagged as do-not-report (DNR) to indicate which result from multiple reported analyses should not be used. Data that have been flagged DNR should not be used for any purpose.

All other data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r^2 below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

QC Element	Reason Code	Definition
Low-Level Calibration Check	LLCH	Low-level calibration check above the upper limit
Low-Level Calibration Check	LLCL	Low-level calibration check below the lower limit
Low-Level Calibration Check	LLXL	Low-level calibration check below the lower limit, extreme discrepancy
Method Blank	MBH	Method blank result \geq LOQ
Method Blank	MBHB	Result is judged to be biased high based on associated method blank result
Method Blank	MBL	Method blank result $<$ LOQ
Matrix Spike	MSH	MS and/or MSD %R above acceptance criterion
Matrix Spike	MSL	MS and/or MSD %R below acceptance criterion
Matrix Spike	MSLX	MS and/or MSD %R below acceptance criterion, extreme discrepancy
Matrix Spike	MSP	MS/MSD RPD above acceptance criterion
Post-Digestion Spike	PDH	Post-digestion spike recovery high
Post-Digestion Spike	PDL	Post-digestion spike recovery low
Post-Digestion Spike	PDLX	Post-digestion spike recovery low, extreme discrepancy
Post-Digestion Spike	PDN	Post-digestion spike not performed or not applicable and serial dilution result not performed or not applicable
Sample Delivery and Condition	BUB	Bubbles $>$ 5 millimeters in volatile organic compounds vial
Sample Delivery and Condition	DAM	Sample container damaged
Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor

**Attachment A – Qualification Summary Table
PCB Congeners by Method 1668C**

SDG: 20484
 Laboratory: Cape Fear Analytical
 Validator: Ken Rapuano, HGL
 Validation Date: 8.15.23

In addition to the qualifiers assigned below, all detected results <PQL retain the J qualifier assigned by the laboratory. All non-standard qualifiers assigned by the laboratory are removed and are not included as the final qualifier.

All samples	All results not otherwise listed above that are indicated as EMPCs			J	J	EMPC

¹ All concentrations in pg/g

² Where multiple qualifiers are applied to a result, the priority for assigning the final qualifier is as follows:

Detected Results: R > J > no qualifier

Non-detected results: R > UJ > U

³ Reason Code Definitions:

EBL = Analyte detected below the PQL in the associated equipment blank

EMPC = Analyte identified as an EMPC; all identification criteria met except IAR

FDPA = Absolute difference criterion not met in field duplicate results <5x PQL

FDPR = RPD criterion not met in field duplicate results ≥5x PQL

MBH = Analyte detected above the PQL in the associated method blank

MBL = Analyte detected below the PQL in the associated method blank

MSL = Analyte detected below the lower control limit in the associated MS and/or MSD

MSLX = Analyte detected below the lower control limit in the associated MS and/or MSD; extreme discrepancy

MSP = MS/MSD precision did not meet criteria

CFA performed analyses for polychlorinated biphenyl (PCB) congeners by EPA Method 1668C on sediment samples collected August 2 and 3, 2022. Analyses were performed in accordance with the project Quality Assurance Project Plan (HGL, 2022).

The data were validated in accordance with the following documents:

- Uniform Federal Policy-Quality Assurance Project Plan (UFP-QAPP), Revision 3; Remedial Design Services, Swan Island Basin Project Area, CERCLA Docket No. 10-2021-001, Portland Harbor Superfund Site Portland, Multnomah County, Oregon (HGL, 2022)
- USEPA National Functional Guidelines for High Resolution Superfund Methods Data Review (NFG) (EPA, 2020)
- HGL SOP HGL SOP 412.501 – Data Validation, U.S. EPA Stage 2A and Stage 2B (HGL, 2021)

In some cases, the calibration criteria presented in the QAPP did not correspond to the criteria presented in the laboratory analytical SOPs. In these cases, the laboratory criteria were used to evaluate calibration performance.

The qualifiers defined in Table 1 of EPA, 2020 have been applied to any results requiring qualification as described in this data validation report; the historical site data set uses only the J qualifier for estimated results (ie, does not include the directional J+ and J- qualifiers) and this convention was retained in this DV report. The qualifiers have also been applied as the final qualifier to the electronic data deliverable (EDD) file provided by the laboratory. Any non-standard qualifiers and informational flags reported by the laboratory in the laboratory qualifier field of this EDD are not included in the final qualifier field. A qualification summary table is provided at the end of this report as Attachment A.

In the text of the data validation report, assigned qualifiers are presented in the format “[qualifier]-[reason code(s)]” for ease of description. When presented in tabular format, the qualifier and the reason codes are presented in the columns named as presented in the EDD. The HGL data validation SOP does not include

a reason code for ion abundance ratio discrepancies in labeled standards or for analyte results reported as estimated potential maximum concentrations (EMPCs); the reason codes IAR and EMPC are used, respectively, where applicable.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. Although no issues were noted initially, during review it was discovered that the column resolution check results for standard d03jan23a_3-2 were missing from the data report. This information was requested from the laboratory and supplied as a separate pdf.

Qualification: None required.

Sample Delivery and Condition – The samples arrived at the laboratory in acceptable condition and temperature. All samples were collected on August 2 and 3, 2022. The samples were shipped on September 16, 2022 and arrived at the laboratory on September 19, 2022. Per the field team leader, the samples were stored at a commercial frozen storage facility before shipping and were transported to the laboratory in a freezer truck. All samples arrived at the laboratory frozen at temperatures of –11.1 or –11.9 °C.

Qualification: None required.

Holding Times – All samples were extracted within the 1-year holding time from collection; all analyses were performed within the 1-year holding time for extracts.

Qualification: None required.

Field Blanks – Equipment blank EB06-08042022 (results reported in SDG 20186) is associated with all sediment samples reported in this SDG. Due to the differences in mass extracted, the concentrations reported as pg/L in EBs correspond to the same concentration in pg/g in sediment samples. The following PCB congeners were detected in the EBs (does not include PCB congeners considered to be analytical artifacts based on corresponding detections in the associated aqueous MBs). Note that EB contamination is not adjusted for dilution when comparing to sample results.

PCB Congener	Concentration (pg/L)	Soil-equivalent Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-4	31.9	31.9	159.5
PCB-6	10.6	10.6	53
PCB-8	37.9	37.9	189.5
PCB-16	11.4	11.4	57
PCB-17	10.5	10.5	52.5
PCB-18/30	24	24	120
PCB-19	4.68	4.68	23.4
PCB-32	7.78	7.78	38.9
PCB-40/71	4.47	4.47	22.35
PCB-99	5.83	5.83	29.15
PCB-132	3.9	3.9	18.5
PCB-184	3.28	3.28	16.4

Qualification: The following results are qualified U-EBL due to contamination in EB06-08042022:

- **SIB-SC-D12-1-2-08/02/2022: PCB-184**
- **SIB-SC-D12-2-3-08/02/2022: PCB-184**
- **SIB-SC-D12-3-4-08/02/2022: PCB-184**
- **SIB-SC-D12-4-5-08/02/2022: PCB-8, PCB-16, and PCB-18/30**
- **SIB-SC-D12-5-6-08/02/2022: PCB-16, PCB-17, PCB-18/30, PCB-19, and PCB-32**
- **FD-24-08/03/2022: PCB-184**

- **SIB-SC-E13-4-5-08/03/2022: PCB-4 and PCB-8**
- **SIB-SC-E13-5-6-08/03/2022: PCB-8**

Field Duplicates – Sample FD-24-08/03/2022 is a field duplicate of sample SIB-SC-E13-2-3-08032022. The parent sample was analyzed at a 5x dilution and the field duplicate was analyzed undiluted; the PQL reported for the field duplicate was used when making absolute difference comparisons. Four congener results did not meet the RPD criteria; affected results are qualified J-FDPR. Eleven congener results did not meet the absolute difference criteria and the affected results are qualified J (detections) or UJ (non-detections), reason code FDPA.

Qualification: The PCB-20/28, PCB-21/33, PCB-31, and PCB-144 results reported for samples FD-24-08/03/2022 and SIB-SC-E13-2-3-08032022 are qualified J-FDPR. The PCB-25, PCB-26/29, PCB-32, PCB-43, PCB-45/51, PCB-50/53, PCB-55, PCB-73, PCB-122, PCB-146, and PCB-161 results reported for samples FD-24-08/03/2022 and SIB-SC-E13-2-3-08032022 are qualified J-FDPA (detections) or UJ-FDPA (non-detections).

Mass Tuning – Mass tuning was performed before the ICal sequence, before each daily analytical sequence, and at the end of each daily analytical sequence. Data was not provided to calculate the resolving power; however, all peaks appeared to be fully resolved and Gaussian in form.

Qualification: None required.

Column Check – Column check data for each analytical sequence showed acceptable separation for PCB-23 and PCB-34 and for PCB-182 and PCB-187 and appropriate coelution for PCB-156 and PCB-157.

Qualification: None required.

Initial Calibration – A five-point ICal was performed on instrument HRP875_1 on April 8, 2022, and is associated with all PCB congener results reported in this SDG. The ICal included all target analytes required by the method (the 12 WHO “Toxic” congeners and the beginning and ending homolog descriptors). All target analytes and labeled standards included in the ICal had %RSDs ≤20%. The ICal verification standard met all acceptance criteria for target analytes and labeled standards.

The ICal was checked by back-calculating the concentration for the short list of PCBs and labeled standards for each calibration level. No acceptance criteria for this back-check were provided in the analytical method or in the laboratory SOP. All back-calculated concentrations agreed with the nominal standard concentration within ±20% and in the judgment of the validator, these results are acceptable.

All ion abundance ratio (IAR) criteria were met in the ICal standards and all S/N ratios were >10.

Qualification: None required.

Continuing Calibration – Target PCBs and labeled analogs met the method %D requirement in each CCV. Ion ratios were in control. All IAR criteria were met in the CCV standards and all S/N ratios were >10.

Qualification: None required.

Method Blanks – The method blank associated with sample analyses was contaminated with the following PCBs.

PCB	Blank Result (pg/g)	Action Level (pg/g)
3	3.28	16.4
11	32.7	163.5
18/30	3.14	15.7

194	2.48	12.4
195	1.84	9.20
205	1.76	8.80

The laboratory applied a B flag to all results that were less than 10x the concentration in the associated blank. All detected results below the action level (calculated at 5x the blank concentration and adjusted for dilution) should be qualified U-MBL.

Qualification: The following sample results are qualified U:

- **SIB-SC-D12-2-3-08/02/2022: PCB-11**
- **SIB-SC-D12-3-4-08/02/2022: PCB-11**
- **SIB-SC-D12-5-6-08/02/2022: PCB-1, PCB-19, PCB-32, PCB-77, and PCB-189**
- **FD-24-08/03/2022: PCB-11**
- **SIB-SC-E13-4-5-08/03/2022: PCB-11**

Labeled Standards – All labeled standard %Rs met the method control limits. All IARs were in control for labeled standards.

Qualification: None required.

Laboratory Control Samples – The LCS (identified as an OPR standard) associated with all PCB sample analyses had %Rs in control.

Qualification: None required.

MS/MSD – An MS/MSD was performed using sample SIB-SC-E13-3-4-08/03/2022. The MS/MSD was spiked with a subset of PCB congeners. Most spiked congeners showed low to extremely low (<10%) %Rs in the MS and/or MSD. In the judgment of the HGL validator, all non-spiked compounds should be qualified J/UJ-MSLX in the parent sample. All spiked compounds showing a discrepancy should be qualified J/UJ MSL or MSDX as appropriate; this does not include spiked compounds where the sample concentration is $\geq 4x$ the spiked concentration. PCB-105 and PCB-209 showed high RPDs in the MS/MSD pair and the results for those two congeners are qualified J-MSP in addition to any other applicable reason codes.

Qualification: The following qualifiers are applied to sample SIB-SC-E13-3-4-08/03/2022:

- All non-spiked compounds are qualified J (detections) or UJ (non-detections), reason code MSLX.
- PCB-1 and PCB-205 are qualified J-MSL.
- PCB-4, PCB-15, PCB-19, PCB-37, PCB-77, PCB-123, PCB-126, PCB-189, PCB-202, and PCB-208 are qualified J-MSLX.
- PCB-105 is qualified J-MSP.
- PCB-209 is qualified J-MSL,MSP.

Raw Data Review – SIB-SC-D12-3-4-08/02/2022 was selected for an in-depth review. Gas chromatograms, retention time windows, and S/N were examined. It was noted that the laboratory was using a different IAR window for PeCBs than is presented in Table 8 of the method. The laboratory SOP indicates that PeCBs are identified using the (M)/(M+2) ions instead of the (M+2)/(M+4) ions. No other discrepancies were noted.

Qualification: None required.

Compound Quantitation and Identification – The HGL reviewer confirmed that the laboratory uses the mean internal standard procedure described in Section 10.5.3 of Method 1688C to quantify PCB congeners that do not have a labeled analog; the RRFs used for internal standard quantitation were updated for each analytical sequence based on the results of the 209-congener solution analyzed at the start of each sequence. Detected results that met all identification criteria except ion abundance ratio were reported as detections by the laboratory with a laboratory qualifier of K. These results should be qualified J-EMPC unless the J qualifier is superseded by a more severe qualifier. The laboratory reports non-detected results as the EDL qualified U on the summary forms in accordance with project data reporting conventions. Detected results below the PQL are reported by the laboratory with a J qualifier. These J qualifiers are retained unless superseded by a more severe qualifier.

Qualification: All results reported with a laboratory qualifier of EMPC are qualified J-EMPC unless superseded by a more severe qualifier. All results reported as detections below the LOQ retain the J qualifier assigned by the laboratory unless superseded by a more severe qualifier.

Calculation and Transcription Verification – Sample SIB-SC-D12-3-4-08/02/2022 was selected for calculation and transcription verification. These calculation verifications used the raw data and were carried through to the results reported on summary pages and also constitute a transcription verification. Calculations are presented in Attachment B.2.

The calculations showed that several PCB congeners had detections reported in the raw data, but the final result was reported as EDL U. The laboratory was contacted and provided this summary of why the results were considered non-detections:

Peak	Criteria	Reason/Data
3,3',5-Trichlorobiphenyl (36)	RRT Window= 0.901-0.905	RRT 0.909

Peak	Criteria	Reason/Data
3,4,5-Trichlorobiphenyl (38)	RRT Window= 0.951-0.956	RRT 0.964
3,4',5-Trichlorobiphenyl (39)	Manually removed	Interference from Te-48
3,3',4,5-Tetrachlorobiphenyl (78)	RRT Window= 0.980-0.983	RRT 0.987
3,4,4',5-Tetrachlorobiphenyl (81)	RRT Window= 1.000-1.003	RRT 0.997
3,3',4,4',5-Pentachlorobiphenyl (126)	RRT Window= 1.000-1.002	RRT 1.004
3,3',4,5,5'-Pentachlorobiphenyl (127)	Manually removed	Interference from Hx-137
2,3,3',4,5,5'-Hexachlorobiphenyl (159)	RRT Window= 0.973-0.975	RRT 0.971
2,3,3',4',5,5'-Hexachlorobiphenyl (162)	RRT Window= 0.983-0.985	RRT 0.986
3,3',4,4',5,5'-Hexachlorobiphenyl (169)	RRT Window= 0.999-1.001	RRT 0.997

Qualification: None required.

Overall Assessment of Data - The data are usable as reported with the qualification applied by the reviewer.

The following Stage 2A review was performed on the requested analyses. No results were rejected, and analytical completeness is 100%.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No completeness issues were noted.

Qualification: None required.

Sample Delivery and Condition – All samples arrived intact at the laboratory in acceptable condition and temperature and were properly preserved.

Qualification: None required.

Holding Times – All samples were prepared and analyzed within their required holding times.

Qualification: None required.

Method Blanks – The method 1668C method blank was contaminated with many PCBs, leading to the following qualification limits:

- 49.6 pg/g PCB-11, leading to a qualification limit of 248 pg/g

- 11.4 pg/g PCB-20/28, leading to a qualification limit of 57.0 pg/g
- 18.4 pg/g PCB-44/47/65, leading to a qualification limit of 92.0 pg/g
- 15.7 pg/g PCB-45/51, leading to a qualification limit of 78.5 pg/g
- 19.0 pg/g PCB-52, leading to a qualification limit of 95.0 pg/g
- 12.7 pg/g PCB-90/101/113, leading to a qualification limit of 63.5 pg/g
- 17.4 pg/g PCB-95, leading to a qualification limit of 87.0 pg/g
- 13.5 pg/g PCB-110/115, leading to a qualification limit of 67.5 pg/g
- 11.6 pg/g PCB-129/138/163, leading to a qualification limit of 58.0 pg/g

Associated detections below the qualification limits should be qualified U.

Qualification: Detections of contaminated compounds detected below the qualification threshold are qualified U-MBL. The affected results include the PCB-11 results reported for samples SIB-SC-E11-1-2-08/04/2022, SIB-SC-E11-2-3-08/04/2022, SIB-SC-E11-4-5-08/04/2022, SIB-SC-F13-1-2-08/08/2022, SIB-SC-F13-2-3-08/08/2022, SIB-SC-F13-3-4-08/08/2022, FD-30-08/08/2022, SIB-SC-F14-1-2-08/08/2022, SIB-SC-F14-3-4-08/08/2022, SIB-SC-F14-4-5-08/08/2022, and SIB-SC-F14-5-6-08/08/2022; and the PCB-20/28 and PCB-45/51 results reported for sample SIB-SC-F13-5-6-08/08/2022.

Equipment Blanks – Equipment blank EB06-08042022 (results reported in SDG 20186) is associated with all samples in this SDG sampled on 08/04/2022; Equipment blank EB07-08092022 (results reported in SDG 20186) is associated with all samples in this SDG sampled on 08/08/2022. Due to the differences in mass extracted, the concentrations reported as pg/L in EBs correspond to the same concentration in pg/g in sediment samples. The following PCB congeners were detected in the EBs (does not include PCB congeners considered to be analytical artifacts based on corresponding detections in the associated aqueous MBs). Note that EB contamination is not adjusted for dilution when comparing to sample results.

EB06-08042022

PCB Congener	Concentration (pg/L)	Soil-equivalent Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-4	31.9	31.9	159.5
PCB-6	10.6	10.6	53
PCB-8	37.9	37.9	189.5
PCB-16	11.4	11.4	57
PCB-17	10.5	10.5	52.5
PCB-18/30	24	24	120
PCB-19	4.68	4.68	23.4
PCB-32	7.78	7.78	38.9
PCB-40/71	4.47	4.47	22.35
PCB-99	5.83	5.83	29.15
PCB-132	3.9	3.9	18.5
PCB-184	3.28	3.28	16.4

All detections were above the qualification threshold and no qualification is required.

EB07-08092022

PCB Congener	Concentration (pg/L)	Soil-equivalent Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-4	40.7	40.7	203.5
PCB-8	38.5	38.5	192.5
PCB-15	13.3	13.3	66.5

PCB Congener	Concentration (pg/L)	Soil-equivalent Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-16	11.1	11.1	55.5
PCB-17	11.3	11.3	56.5
PCB-18/30	25.7	25.7	128.5
PCB-19	5.74	5.74	28.7
PCB-25	1.73	1.73	8.65
PCB-32	6.77	6.77	33.85
PCB-35	3.12	3.12	15.6
PCB-40/71	7.38	7.38	36.9
PCB-54	1.85	1.85	9.25
PCB-99	8.01	8.01	40.05

The following results were qualified U-EBL due to contamination in EB07-08092022.

- **SIB-SC-F13-4-5-08/08/2022: PCB-54**
- **SIB-SC-F13-5-6-08/08/2022: PCB-17, PCB-18/30, PCB-19, PCB-32**
- **SIB-SC-F14-4-5-08/08/2022: PCB-8, PCB-16, PCB-18/30**
- **SIB-SC-F14-5-6-08/08/2022: PCB-8**

Ambient Blanks – An ambient blank was not submitted with this SDG.

Qualification: None required.

Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) – All LCS/LCSD %Rs and RPDs were within QAPP control limits.

Qualification: None required.

Surrogates – All surrogates (EISs) were within QAPP control limits.

Qualification: None required.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) – MS/MSD analysis was performed on sample SIB-SC-F13-2-3-08/08/2022. Many analytes recovered outside of QAPP control limits in the MS and/or MSD. For several of these, the sample concentration was >4x the spike concentration and the %R results are not applicable. For the remaining failures, two analytes had high recoveries in the MS (associated detections in parent sample should be qualified J-MSH), six analytes had low recoveries in the MS and/or MSD (associated results in parent sample should be qualified J/UJ-MSL), and five analytes had extremely low recoveries in the MS and/or MSD (associated results in parent sample should be qualified J/R-MSLX). Additionally, seven analytes had RPDs outside of control limits (associated results in parent sample should be qualified J-MSP).

***Qualification:* In sample SIB-SC-F13-2-3-08/08/2022, results are qualified as follows:**

- **PCB-4: J-MSLX,MSP**
- **PCB-15: J-MSLX**
- **PCB-19: J-MSL**
- **PCB-37: J-MSLX**
- **PCB-77: J-MSL**
- **PCB-105: J-MSP**
- **PCB-114: J-MSL,MSP**
- **PCB-118: J-MSP**

- **PCB-123: J-MSL,MSP**
- **PCB-156/157: J-MSP**
- **PCB-167: J-MSH,MSLX,MSP**
- **PCB-202: J-MSL**
- **PCB-206: J-MSL,MSLX**

Field Duplicate – Sample FD-30-08/08/2022 was submitted as a field duplicate of sample SIB-SC-F13-3-4-08/08/2022. RPD or absolute difference were outside control limits for 81 target analytes and associated results in the parent sample and field duplicate should be qualified J-FDPR and J-FDPA, respectively. See Attachment A for a full documentation of the field duplicate comparison.

Qualification: In samples FD-30-08/08/2022 was submitted as a field duplicate of sample SIB-SC-F13-3-4-08/08/2022, all failing analytes are qualified J-FDPR if RPD criteria was used for comparison, and J-FDPA if absolute difference criteria was used for comparison.

Laboratory Duplicate – A laboratory duplicate was not performed in this SDG.

Qualification: None required.

Compound Quantitation – Analyte non-detections were reported as ND with the associated DL, LOD, and LOQ included on the result summary pages. This reporting format is equivalent to reporting non-detected data in the DoD “LOD U” format. Analytes detected between the DL and LOQ were reported as J-qualified results by the laboratory. These J qualifiers were retained unless superseded by a more severe qualifier.

If a detected analyte has an ion ratio outside the characteristic ion ratio window, the result is reported as an estimated maximum potential concentration. All results reported as an EMPC are qualified J-EMPC unless superseded by a higher priority qualifier.

Qualification: None required.

Qualification Summary Table (results in pg/g):

Sample	Analyte	Lab Value	Lab Qualifier	Validated Value	Validated Qualifier	Reason Code

The following Stage 2A review was performed on the requested analyses. No results were rejected, and analytical completeness is 100%.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No completeness issues were noted.

Qualification: None required.

Sample Delivery and Condition – With the exception of several labeling discrepancies, which were resolved, all samples arrived intact at the laboratory in acceptable condition and temperature and were properly preserved. No other discrepancies were noted.

Qualification: None required.

Holding Times – All samples were prepared and analyzed within their required holding times.

Qualification: None required.

Method Blanks – The method 1613B method bank was contaminated with 0.836 pg/g of 1,2,3,4,6,7,8,9-OCDD, 0.240 pg/g of 1,2,3,4,7,8-HxCDF, and 0.460 pg/g of 1,2,3,4,6,7,8-HpCDF leading to qualification limits of 4.18 pg/g, 1.2 pg/g, and 2.3 pg/g, respectively. The 1,2,3,4,7,8-HxCDF results for samples SIB-SC-E26-7-7.8-07/06/2022, SIB-SC-C23-10-11-07/06/2022, SIB-SC-C23-12-13-07/06/2022, SIB-SC-F09-6-7-07/14/2022, SIB-SC-D18-6-7-07/19/2022, SIB-SC-E17-10-11-07/19/2022, SIB-SC-E17-11-11.8-07/19/2022, SIB-SC-E19-14-14.4-07/20/2022, and the 1,2,3,4,6,7,8-HpCDF results in samples SIB-SC-E26-6-7-07/06/2022, SIB-SC-E26-7-7.8-07/06/2022, SIB-SC-C23-12-13-07/06/2022, SIB-SC-F09-6-7-07/14/2022, SIB-SC-E17-10-11-07/19/2022, SIB-SC-E17-11-11.8-07/19/2022, and SIB-SC-E19-14-14.4-07/20/2022 should be qualified U-MBL.

Qualification: The 1,2,3,4,7,8-HxCDF results for samples SIB-SC-E26-7-7.8-07/06/2022, SIB-SC-C23-10-11-07/06/2022, SIB-SC-C23-12-13-07/06/2022, SIB-SC-F09-6-7-07/14/2022, SIB-SC-D18-6-7-07/19/2022, SIB-SC-E17-10-11-07/19/2022, SIB-SC-E17-11-11.8-07/19/2022, and SIB-SC-E19-14-14.4-07/20/2022 are qualified U-MBL. The 1,2,3,4,6,7,8-HpCDF results in samples SIB-SC-E26-6-7-07/06/2022, SIB-SC-E26-7-7.8-07/06/2022, SIB-SC-C23-12-13-07/06/2022, SIB-SC-F09-6-7-07/14/2022, SIB-SC-E17-10-11-07/19/2022, SIB-SC-E17-11-11.8-07/19/2022, and SIB-SC-E19-14-14.4-07/20/2022 are qualified UJ-MBL, due to these results already being J-qualified due to LCS failures. Note that the “detect_flag” field in the EDD is changed from “Y” to “N” for the affected results.

Rinsate Blanks – Rinse blank EB01-07/12/2022 (results reported in SDG 20046) is associated with all samples with results reported in this SDG that were sampled on 7/6/22 and 7/7/22. The rinse blank was free from contamination.

Rinse blank EB02-07/13/2022 (results reported in SDG 20046) is associated with all samples with results reported in this SDG that were sampled on 7/14/22. The rinse blank was free from contamination.

Rinse blank EB03-07/20/2022 (results reported in SDG 20074) is associated with all samples with results reported in this SDG that were sampled on 7/19/22 and 7/20/22. The rinse blank was free from contamination.

Qualification: None required.

Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) – LCS/LCSD %Rs were within QAPP control limits with the exception of 1,2,3,6,7,8-HxCDD and 1,2,3,4,6,7,8-HpCDF, which yielded recoveries above control limits in the LCS. All detected results for 1,2,3,6,7,8-HxCDD and 1,2,3,4,6,7,8-HpCDF should be qualified J-LCSH; non-detected results do not require qualification. All RPDs were within QAPP control limits.

Qualification: All detected results for 1,2,3,6,7,8-HxCDD and 1,2,3,4,6,7,8-HpCDF are qualified J-LCSH.

Surrogates – All surrogates (labeled standards) were within control limits.

Qualification: None required.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) – An MS/MSD was performed using sample SIB-SC-D23-10-11-07/06/2022. The MS had extremely low %R for 1,2,3,4,6,7,8,9-OCDD and 1,2,3,4,6,7,8,9-OCDF, and low %R for 1,2,3,4,6,7,8-HpCDF. The MSD has low %R for 1,2,3,4,6,7,8,9-OCDF and high %R for 1,2,3,4,6,7,8,9-OCDD. For 1,2,3,4,6,7,8,9-OCDD and 1,2,3,4,6,7,8,9-OCDF, the sample concentration was >4x the spike concentration and the %R results are not applicable. The 1,2,3,4,6,7,8-HpCDF result in sample SIB-SC-D23-10-11-07/06/2022 should be qualified J-MSL. All RPDs were within control limits.

Qualification: The 1,2,3,4,6,7,8-HpCDF result in sample SIB-SC-D23-10-11-07/06/2022 is qualified J-MSL.

Field Duplicate – No field duplicates were submitted with this SDG.

Qualification: None required.

Compound Quantitation – Analyte non-detections were reported as the EDL and qualified U. Analytes detected between the EDL and PQL were reported as J-qualified results by the laboratory. These J qualifiers were retained unless superseded by a more severe qualifier.

If a detected analyte has an ion ratio outside the characteristic ion ratio window, the result is reported as an estimated maximum potential concentration. All results reported as an EMPC (a “K” flag is present in the laboratory qualifier) are qualified J-EMPC unless superseded by a higher priority qualifier.

2,3,7,8-TCDF is not fully resolved on the DB-5MS column; when detected above the PQL on the DB-5MS column, the result was confirmed on a DB-225 column using the instrument ID listed in the case narrative. In cases where two results are reported for 2,3,7,8-TCDF for a sample, the result from the DB-225 column is selected for use and the result from the DB-5MS is qualified DNR-EXC.

In cases where a target analyte is detected at a concentration above the calibrated range, the laboratory’s practice is to report the result with a laboratory qualifier of E without running a dilution so long as the detector is not saturated. The OCDD results for 8 affected samples are qualified J-ACR.

***Qualification:* The following results are qualified:**

- All results reported with a laboratory qualifier of K are qualified J with reason code EMPC.
- All 2,3,7,8-TCDF results reported from the DB-5MS column that are paired with a 2,3,7,8-TCDF result from the DB-225 column are qualified DNR, reason code EXC; note that the reportable_result field for these results are populated with “Yes” by the laboratory and are changed to “No” for the affected results.
- Eight OCDD results reported with a laboratory qualifier of E are qualified J with reason code ACR; note that the reportable_result field for these results are populated with “No” by the laboratory and are changed to “Yes” for the affected results. Two additional OCDD results spiked into the MS and MSD also had this change made; although spike results are not validated, these results are reportable.
- Two Heptachloro-p-dioxin results reported with a laboratory qualifier of E have the reportable_result field populated with “No” by the laboratory and are changed to “Yes”. Although total congener results are not validated, these results are reportable.

Qualification Summary Table (results in pg/g):

Sample	Analyte	Lab Value	Lab Qualifier	Validated Value	Validated Qualifier	Reason Code
SIB-SC-D23-10-11-07/06/2022	1,2,3,4,6,7,8-HEPTACHLORODIBENZOFURAN	370	--	370	J	LCSH,MSL

The following Stage 2A review was performed on the requested analyses. No results were rejected, and analytical completeness is 100%.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No completeness issues were noted.

Qualification: None required.

Sample Delivery and Condition – With the exception of several labeling discrepancies, which were resolved, all samples arrived intact at the laboratory in acceptable condition and temperature and were properly preserved. No other discrepancies were noted.

Qualification: None required.

Holding Times – All samples were prepared and analyzed within their required holding times.

Qualification: None required.

Method Blanks – The method 1613B method bank was contaminated with 0.73 pg/g of 1,2,3,4,6,7,8,9-OCDD and 0.364 pg/g of 1,2,3,4,6,7,8-HpCDF leading to qualification limits of 3.65 pg/g and 1.82 pg/g,

respectively. The 1,2,3,4,6,7,8-HpCDF results for samples SIB-SC-E30-7-8-07/23/2022, SIB-SC-E30-8-9-07/23/2022, SIB-SC-E30-9-10-07/23/2022, SIB-SC-F21-6-7-07/24/2022, and SIB-SC-F21-7-8-07/24/2022 should be qualified U-MBL.

Qualification: The 1,2,3,4,6,7,8-HpCDF results for samples SIB-SC-E30-7-8-07/23/2022, SIB-SC-E30-8-9-07/23/2022, SIB-SC-E30-9-10-07/23/2022, SIB-SC-F21-6-7-07/24/2022, and SIB-SC-F21-7-8-07/24/2022 are qualified U-MBL. Note that the “detect_flag” field in the EDD is changed from “Y” to “N” for the affected results.

Rinsate Blanks – Rinse blank EB01-07/12/2022 (results reported in SDG 20046) is associated with all samples with results reported in this SDG that were sampled on 7/7/22 and 7/8/22. The rinse blank was free from contamination.

Rinse blank EB04-07/21/2022 (results reported in SDG 20074) is associated with all samples with results reported in this SDG that were sampled on 7/23/22. The rinse blank was free from contamination.

Rinse blank EB05-07/26/2022 (results reported in SDG 20123) is associated with all samples with results reported in this SDG that were sampled on 7/24/22. The rinse blank was free from contamination.

Qualification: None required.

Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) – LCS/LCSD %Rs were within QAPP control limits. All RPDs were within QAPP control limits with the exception of 1,2,3,6,7,8-HxCDF and 1,2,3,4,7,8,9-HpCDF. All detections of these analytes in all associated samples should be qualified J-LCSP.

Qualification: All detected results for 1,2,3,6,7,8-HxCDF and 1,2,3,4,7,8,9-HpCDF are qualified J-LCSP.

Surrogates – All surrogates (labeled standards) were within control limits.

Qualification: None required.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) – An MS/MSD was performed using sample SIB-SC-C34-13-14-07/07/2022. The MS has extremely low %R for 1,2,3,4,6,7,8,9-OCDD and low %R for 1,2,3,4,6,7,8,9-HpCDD. The MSD has a high %R for 1,2,3,4,6,7,8,9-OCDF and 1,2,3,4,6,7,8,9-OCDD. For 1,2,3,4,6,7,8,9-OCDD and 1,2,3,4,6,7,8,9-HpCDD, the sample concentration was >4x the spike concentration and the %R results are not applicable. All RPDs were within control limits with the exception of 1,2,3,4,6,7,8,9-OCDF. The 1,2,3,4,6,7,8,9-OCDF result in sample SIB-SC-C34-13-14-07/07/2022 should be qualified J-MSH,MSP.

Qualification: The 1,2,3,4,6,7,8,9-OCDF result in sample SIB-SC-C34-13-14-07/07/2022 is qualified J-MSH,MSP.

Field Duplicate – No field duplicates were submitted with this SDG.

Qualification: None required.

Compound Quantitation – Analyte non-detections were reported as the EDL and qualified U. Analytes detected between the EDL and PQL were reported as J-qualified results by the laboratory. These J qualifiers were retained unless superseded by a more severe qualifier.

If a detected analyte has an ion ratio outside the characteristic ion ratio window, the result is reported as an estimated maximum potential concentration. All results reported as an EMPC (a “K” flag is present in the laboratory qualifier) are qualified J-EMPC unless superseded by a higher priority qualifier.

2,3,7,8-TCDF is not fully resolved on the DB-5MS column; when detected above the PQL on the DB-5MS column, the result was confirmed on a DB-225 column using the instrument ID listed in the case narrative. In cases where two results are reported for 2,3,7,8-TCDF for a sample, the result from the DB-225 column is selected for use and the result from the DB-5MS is qualified DNR-EXC.

In cases where a target analyte is detected at a concentration above the calibrated range, the laboratory's practice is to report the result with a laboratory qualifier of E without running a dilution so long as the detector is not saturated. The OCDD results for 14 affected samples are qualified J-ACR.

Qualification: The following results are qualified:

- All results reported with a laboratory qualifier of K are qualified J with reason code EMPC.
- All 2,3,7,8-TCDF results reported from the DB-5MS column that are paired with a 2,3,7,8-TCDF result from the DB-225 column are qualified DNR, reason code EXC; note that the reportable_result field for these results are populated with "Yes" by the laboratory and are changed to "No" for the affected results.
- Fourteen OCDD results reported with a laboratory qualifier of E are qualified J with reason code ACR; note that the reportable_result field for these results are populated with "No" by the laboratory and are changed to "Yes" for the affected results.
- Two total heptachloro-p-dioxin results reported with a laboratory qualifier of E have the reportable_result field populated with "No" by the laboratory and are changed to "Yes". Although total congener results are not validated, these results are reportable.

Qualification Summary Table (results in pg/g):

Sample	Analyte	Lab Value	Lab Qualifier	Validated Value	Validated Qualifier	Reason Code

The following Stage 2A review was performed on the requested analyses. No results were rejected, and analytical completeness is 100%.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No completeness issues were noted.

Qualification: None required.

Sample Delivery and Condition – With the exception of several labeling discrepancies, which were resolved, all samples arrived intact at the laboratory in acceptable condition and temperature and were properly preserved. No other discrepancies were noted.

Qualification: None required.

Holding Times – All samples were prepared and analyzed within their required holding times.

Qualification: None required.

Method Blanks – The method 1613B method bank was contaminated with 1.09 pg/g of 1,2,3,4,6,7,8,9-OCDD and 0.330 pg/g of 1,2,3,4,6,7,8-HpCDF leading to qualification limits of 5.45 pg/g and 1.65 pg/g,

respectively. The 1,2,3,4,6,7,8-HpCDF results in samples SIB-SC-F18-8-9-07/21/2022, SIB-SC-I05-7-8-07/28/2022, and SIB-SC-D08-6-7-08/04/2022 should be qualified U-MBL.

Qualification: The 1,2,3,4,6,7,8-HpCDF results in samples SIB-SC-F18-8-9-07/21/2022, SIB-SC-I05-7-8-07/28/2022, and SIB-SC-D08-6-7-08/04/2022 are qualified U-MBL. Note that the “detect_flag” field in the EDD is changed from “Y” to “N” for the affected results.

Rinsate Blanks – Rinse blank EB04-07/21/2022 (results reported in SDG 20074) is associated with all samples with results reported in this SDG that were sampled on 7/21/22. The rinse blank was free from contamination.

Rinse blank EB05-07/26/2022 (results reported in SDG 20123) is associated with all samples with results reported in this SDG that were sampled on 7/26/22 and 7/28/22. The rinse blank was free from contamination.

Rinse blank EB06-08/04/2022 (results reported in SDG 20187) is associated with all samples with results reported in this SDG that were sampled on 8/4/22. The rinse blank was contaminated with multiple PCDD/PCDF compounds; however, all detected results in this EB were not substantially different from those reported in the method blank associated with this EB. The detected results reported for EB06-08/04/2022 represent contamination associated with aqueous sample preparation and are not related to cross-contamination in the field. No additional qualification is required.

Rinse blank EB07-08/09/2022 (results reported in SDG 20187) is associated with all samples with results reported in this SDG that were sampled on 08/08/2022. The rinse blank was contaminated with the following analytes:

- 1,2,3,4,6,7,8-HpCDD at 1.53 pg/L, leading to a qualification limit of 0.765 pg/g
- 1,2,3,4,6,7,8,9-OCDD at 2.79 pg/L, leading to a qualification limit of 1.395 pg/g
- 1,2,3,4,7,8-HxCDF at 0.902 pg/L, leading to a qualification limit of 0.451 pg/g
- 1,2,3,4,6,7,8-HpCDF at 1.85 pg/L, leading to a qualification limit of 0.925 pg/g

The 1,2,3,4,7,8-HxCDF and 1,2,3,4,6,7,8-HpCDF results for sample SIB-SC-F18-8-9-07/21/2022 were below the qualification limits and were qualified U-EBL. All other associated detections were above the qualification limit, and no qualification is required.

Rinse blank EB08-08/21/2022 (results reported in SDG 20283) is associated with all samples with results reported in this SDG that were sampled on 08/19/2022. The rinse blank was contaminated with 1,2,3,4,6,7,8,9-OCDD at 4.36 pg/L; however, the OCDD result was not substantially different from that reported in the method blank associated with this EB. The detected result reported for EB08-08/21/2022 represents contamination associated with aqueous sample preparation and is not related to cross-contamination in the field. No additional qualification is required.

Qualification: None required.

Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) – LCS/LCSD %Rs and RPDs were within QAPP control limits.

Qualification: None required.

Surrogates – All surrogates (labeled standards) were within control limits.

Qualification: None required.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) – An MS/MSD was performed using sample SIB-SC-F18-6-7-07/21/2022. The MSD had a high %R for 1,2,3,4,6,7,8,9-OCDD. All RPDs were within control limits

with the exception of 1,2,3,4,6,7,8,9-OCDD. The 1,2,3,4,6,7,8,9-OCDD result in sample SIB-SC-F18-6-7-07/21/2022 should be qualified J-MSH,MSP.

Qualification: The 1,2,3,4,6,7,8,9-OCDD result in sample SIB-SC-F18-6-7-07/21/2022 is qualified J-MSH,MSP.

Field Duplicate – No field duplicates were submitted with this SDG.

Qualification: None required.

Compound Quantitation – Analyte non-detections were reported as the EDL and qualified U. Analytes detected between the EDL and PQL were reported as J-qualified results by the laboratory. These J qualifiers were retained unless superseded by a more severe qualifier.

If a detected analyte has an ion ratio outside the characteristic ion ratio window, the result is reported as an estimated maximum potential concentration. All results reported as an EMPC (a “K” flag is present in the laboratory qualifier) are qualified J-EMPC unless superseded by a higher priority qualifier.

2,3,7,8-TCDF is not fully resolved on the DB-5MS column; when detected above the PQL on the DB-5MS column, the result was confirmed on a DB-225 column using the instrument ID listed in the case narrative. In cases where two results are reported for 2,3,7,8-TCDF for a sample, the result from the DB-225 column is selected for use and the result from the DB-5MS is qualified DNR-EXC.

In cases where a target analyte is detected at a concentration above the calibrated range, the laboratory’s practice is to report the result with a laboratory qualifier of E without running a dilution so long as the detector is not saturated. The OCDD results for 1 affected sample is qualified J-ACR.

Qualification: The following results are qualified:

- All results reported with a laboratory qualifier of K are qualified J with reason code EMPC.
- All 2,3,7,8-TCDF results reported from the DB-5MS column that are paired with a 2,3,7,8-TCDF result from the DB-225 column are qualified DNR, reason code EXC; note that the reportable_result field for these results are populated with “Yes” by the laboratory and are changed to “No” for the affected results.
- One OCDD result reported with a laboratory qualifier of E is qualified J with reason code ACR; note that the reportable_result field for this result is populated with “No” by the laboratory and is changed to “Yes” for the affected results.

Qualification Summary Table (results in pg/g):

Sample	Analyte	Lab Value	Lab Qualifier	Validated Value	Validated Qualifier	Reason Code

The following Stage 2A review was performed on the requested analyses. No results were rejected, and analytical completeness is 100%.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No completeness issues were noted.

Qualification: None required.

Sample Delivery and Condition – All samples arrived intact at the laboratory in acceptable condition and temperature and were properly preserved. No discrepancies were noted.

Qualification: None required.

Holding Times – All samples were prepared and analyzed within their required holding times.

Qualification: None required.

Method Blanks – The method 1613B method bank was contaminated with several target analytes including the following:

- 1,2,3,4,6,7,8-HpCDD at 0.31 pg/g, leading to a qualification limit of 1.55 pg/g
- 1,2,3,4,6,7,8,9-OCDD at 6.43 pg/g, leading to a qualification limit of 32.15 pg/g
- 2,3,7,8-TCDF at 0.144 pg/g, leading to a qualification limit of 0.72 pg/g
- 1,2,3,7,8-PeCDF at 0.11 pg/g, leading to a qualification limit of 0.55 pg/g
- 1,2,3,4,7,8-HxCDF at 0.16 pg/g, leading to a qualification limit of 0.80 pg/g
- 1,2,3,6,7,8-HxCDF at 0.078 pg/g, leading to a qualification limit of 0.39 pg/g
- 1,2,3,4,6,7,8-HpCDF at 0.278 pg/g, leading to a qualification limit of 1.39 pg/g
- 1,2,3,4,6,7,8,9-OCDF at 0.26 pg/g, leading to a qualification limit of 1.3 pg/g

Detections in associated samples less than or equal to the qualification limits should be qualified U-MBL.

Qualification: The following results were qualified U-MBL; the detect_flag for the affected results is changed from Y to N.

- The 1,2,3,4,6,7,8-HpCDD result in sample SIB-SC-E04-7-8-08/08/2022
- The 1,2,3,4,6,7,8,9-OCDD results in samples SIB-SC-E04-7-8-08/08/2022 and SIB-SC-E04-8-9-08/08/2022
- The 2,3,7,8-TCDF results in samples SIB-SC-E04-6-7-08/08/2022, SIB-SC-E04-8-9-08/08/2022, SIB-SC-E04-9-10-08/08/2022, SIB-SC-F04-6-7-08/11/2022, SIB-SC-F04-7-8-08/11/2022, SIB-SC-F04-8-9-08/11/2022, SIB-SC-F04-9-10-08/11/2022, and SIB-SC-F04-10-11-08/11/2022.
- The 1,2,3,7,8-PeCDF results in samples SIB-SC-E04-6-7-08/08/2022, SIB-SC-F04-6-7-08/11/2022, and SIB-SC-F04-10-11-08/11/2022
- The 1,2,3,4,7,8-HxCDF results in samples SIB-SC-E04-6-7-08/08/2022, SIB-SC-E04-8-9-08/08/2022, SIB-SC-E04-9-10-08/08/2022, SIB-SC-F04-7-8-08/11/2022, SIB-SC-F04-9-10-08/11/2022, and SIB-SC-F04-10-11-08/11/2022
- The 1,2,3,6,7,8-HxCDF results in samples SIB-SC-F04-7-8-08/11/2022 and SIB-SC-F04-9-10-08/11/2022
- The 1,2,3,4,6,7,8-HpCDF results in samples SIB-SC-E04-7-8-08/08/2022, SIB-SC-E04-8-9-08/08/2022, and SIB-SC-E04-9-10-08/08/2022.

Rinsate Blanks – Rinse blank EB07-08/09/2022 (results reported in SDG 20187) is associated with all samples with results reported in this SDG. The rinsate blank was contaminated with the following target analytes.

- 1,2,3,4,6,7,8-HpCDD at 1.53 pg/L, leading to a qualification limit of 0.765
- 1,2,3,4,6,7,8,9-OCDD at 2.79 pg/L, leading to a qualification limit of 1.395
- 1,2,3,4,7,8-HxCDF at 0.902 pg/L, leading to a qualification limit of 0.451
- 1,2,3,4,6,7,8-HpCDF at 1.85 pg/L, leading to a qualification limit of 0.925 pg/g

Detections in associated samples less than or equal to the qualification limits should be qualified U-EBL.

Qualification: The following results were qualified U-EBL; the detect_flag for the affected results is changed from Y to N.

- The 1,2,3,4,6,7,8-HpCDD result in sample SIB-SC-E04-7-8-08/08/2022
- The 1,2,3,4,7,8-HxCDF results in samples SIB-SC-E04-8-9-08/08/2022, SIB-SC-E04-9-10-08/08/2022, SIB-SC-F04-7-8-08/11/2022, SIB-SC-F04-9-10-08/11/2022, and SIB-SC-F04-10-11-08/11/2022
- The 1,2,3,4,6,7,8-HpCDF results in samples SIB-SC-E04-7-8-08/08/2022, SIB-SC-E04-8-9-08/08/2022, and SIB-SC-E04-9-10-08/08/2022

Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) – LCS/LCSD %Rs and RPDs were within QAPP control limits.

Qualification: None required.

Surrogates – All surrogates (labeled standards) were within control limits.

Qualification: None required.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) – An MS/MSD was performed using sample SIB-SC-E04-6-7-08/08/2022. All %Rs and RPDs were within QAPP control limits.

Qualification: None required.

Field Duplicate – No field duplicates were submitted with this SDG.

Qualification: None required.

Compound Quantitation – Analyte non-detections were reported as the EDL and qualified U. Analytes detected between the EDL and PQL were reported as J-qualified results by the laboratory. These J qualifiers were retained unless superseded by a more severe qualifier.

If a detected analyte has an ion ratio outside the characteristic ion ratio window, the result is reported as an estimated maximum potential concentration. All results reported as an EMPC (a “K” flag is present in the laboratory qualifier) are qualified J-EMPC unless superseded by a higher priority qualifier.

2,3,7,8-TCDF is not fully resolved on the DB-5MS column; when detected above the PQL on the DB-5MS column, the result was confirmed on a DB-225 column using the instrument ID listed in the case narrative. In cases where two results are reported for 2,3,7,8-TCDF for a sample, the result from the DB-225 column is selected for use and the result from the DB-5MS is qualified DNR-EXC.

***Qualification:* The following results are qualified:**

- All results reported with a laboratory qualifier of K are qualified J with reason code EMPC.
- All 2,3,7,8-TCDF results reported from the DB-5MS column that are paired with a 2,3,7,8-TCDF result from the DB-225 column are qualified DNR, reason code EXC; note that the reportable_result field for these results are populated with “Yes” by the laboratory and are changed to “No” for the affected results.

Qualification Summary Table (results in pg/g):

Sample	Analyte	Lab Value	Lab Qualifier	Validated Value	Validated Qualifier	Reason Code
SIB-SC-E04-6-7-08/08/2022	1,2,3,4,7,8,9-HEPTACHLORODIBENZOFURAN	0.294	JK	0.294	J	EMPC

The following Stage 2A review was performed on the requested analyses. No results were rejected, and analytical completeness is 100%.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No completeness issues were noted.

Qualification: None required.

Sample Delivery and Condition – All samples arrived intact at the laboratory in acceptable condition and temperature and were properly preserved. No other discrepancies were noted.

Qualification: None required.

Holding Times – All samples were prepared and analyzed within their required holding times.

Qualification: None required.

Method Blanks – The method 1613B method bank was contaminated with target analytes including the following:

- 1,2,3,4,6,7,8,9-OCDD at 0.678 pg/g, leading to a qualification limit of 3.39 pg/g
- 2,3,7,8-TCDF at 0.258 pg/g, leading to a qualification limit of 1.29 pg/g
- 1,2,3,4,6,7,8-HpCDF at 0.316 pg/g, leading to a qualification limit of 1.58 pg/g

Detections in associated samples less than or equal to the qualification limits should be qualified U-MBL.

Qualification: The following results were qualified U-MBL; the detect_flag for the affected results is changed from Y to N.

- The 2,3,7,8-TCDF results in samples SIB-SC-C25-11-12-07/11/2022 and SIB-SC-E31-11-12-07/09/2022
- The 1,2,3,4,6,7,8-HpCDF results in samples SIB-SC-E28-6-7-07/10/2022 and SIB-SC-E29-6-6-07/10/2022

Rinse Blanks – Rinse blank EB01-07/12/2022 (results reported in SDG 20046) is associated with all samples with results reported in this SDG. The rinse blank was free from contamination.

Qualification: None required.

Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) – LCS/LCSD %Rs and RPDs were within QAPP control limits.

Qualification: None required.

Surrogates – All surrogates (labeled standards) were within control limits.

Qualification: None required.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) – An MS/MSD was performed using sample SIB-SC-C25-11-12-07/11/2022. The MS and MSD had high %R for 1,2,3,4,6,7,8-HpCDD, 1,2,3,4,6,7,8,9-OCDD, 1,2,3,4,6,7,8-HpCDF, and 1,2,3,4,6,7,8,9-OCDF. For 1,2,3,4,6,7,8,9-OCDD, the sample concentration was >4x the spike concentration and the %R results are not applicable. The MS/MSD pair showed high RPDs for 1,2,3,4,6,7,8-HpCDD and 1,2,3,4,6,7,8,9-OCDD. For sample SIB-SC-C25-11-12-07/11/2022, the 1,2,3,4,6,7,8-HpCDD result should be qualified J-MSH,MSP, the 1,2,3,4,6,7,8,9-OCDD result should be qualified J-MSP, and the 1,2,3,4,6,7,8-HpCDF and 1,2,3,4,6,7,8,9-OCDF results should be qualified J-MSH.

Qualification: For sample SIB-SC-C25-11-12-07/11/2022, the 1,2,3,4,6,7,8-HpCDD result is qualified J-MSH,MSP, the 1,2,3,4,6,7,8,9-OCDD result is qualified J-MSP, and the 1,2,3,4,6,7,8-HpCDF and 1,2,3,4,6,7,8,9-OCDF results are qualified J-MSH.

Field Duplicate – No field duplicate was submitted with this SDG.

Qualification: None required.

Compound Quantitation – Analyte non-detections were reported as the EDL and qualified U. Analytes detected between the EDL and PQL were reported as J-qualified results by the laboratory. These J qualifiers were retained unless superseded by a more severe qualifier.

If a detected analyte has an ion ratio outside the characteristic ion ratio window, the result is reported as an estimated maximum potential concentration. All results reported as an EMPC (a “K” flag is present in the laboratory qualifier) are qualified J-EMPC unless superseded by a higher priority qualifier.

2,3,7,8-TCDF is not fully resolved on the DB-5MS column; when detected above the PQL on the DB-5MS column, the result was confirmed on a DB-225 column using the instrument ID listed in the case narrative. In cases where two results are reported for 2,3,7,8-TCDF for a sample, the result from the DB-225 column is selected for use and the result from the DB-5MS is qualified DNR-EXC.

In cases where a target analyte is detected at a concentration above the calibrated range, the laboratory's practice is to report the result with a laboratory qualifier of E without running a dilution so long as the detector is not saturated. The OCDD results for 13 affected samples are qualified J-ACR.

Qualification: The following results are qualified:

- All results reported with a laboratory qualifier of K are qualified J with reason code EMPC.
- All 2,3,7,8-TCDF results reported from the DB-5MS column that are paired with a 2,3,7,8-TCDF result from the DB-225 column are qualified DNR, reason code EXC; note that the reportable_result field for these results are populated with "Yes" by the laboratory and are changed to "No" for the affected results.
- Thirteen OCDD results reported with a laboratory qualifier of E are qualified J with reason code ACR; note that the reportable_result field for these results are populated with "No" by the laboratory and are changed to "Yes" for the affected results.

Qualification Summary Table (results in pg/g):

Sample	Analyte	Lab Value	Lab Qualifier	Validated Value	Validated Qualifier	Reason Code
SIB-SC-C25-11-12-07/11/2022	1,2,3,4,6,7,8-HEPTACHLORODIBENZOFURAN	117	--	117	J	MSH

The following Stage 2A review was performed on the requested analyses. No results were rejected, and analytical completeness is 100%.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No completeness issues were noted.

Qualification: None required.

Sample Delivery and Condition – With the exception of several labeling discrepancies, which were resolved, all samples arrived intact at the laboratory in acceptable condition and temperature and were properly preserved. No other discrepancies were noted.

Qualification: None required.

Holding Times – All samples were prepared and analyzed within their required holding times.

Qualification: None required.

Method Blanks – The method 1613B method bank was contaminated with several analytes. See table below for analyte-specific contamination levels and qualification limits. Any detections in associated samples at or below the qualification limits should be qualified U-MBL.

Analyte	Result (pg/g)	Qualification Limit (pg/g)
1,2,3,4,6,7,8-HpCDD	0.310	1.55
1,2,3,4,6,7,8,9-OCDD	6.43	32.15
2,3,7,8-TCDF	0.144	0.72
1,2,3,7,8-PeCDF	0.110	0.55
1,2,3,4,7,8-HxCDF	0.16	0.8

Analyte	Result (pg/g)	Qualification Limit (pg/g)
1,2,3,6,7,8-HxCDF	0.078	0.39
1,2,3,4,6,7,8-HpCDF	0.278	1.39
1,2,3,4,6,7,8,9-OCDF	0.26	1.3

Qualification: The 1,2,3,4,6,7,8,9-OCDD results in samples SIB-SC-F08-7-8-07/14/2022 and SIB-SC-F08-8-9-07/14/2022; the 2,3,7,8-TCDF results in samples SIB-SC-F08-6-7-07/14/2022, SIB-SC-F08-7-8-07/14/2022, SIB-SC-F08-9-10-07/14/2022, and SIB-SC-F08-10-11-07/14/2022; the 1,2,3,7,8-PeCDF results in samples SIB-SC-F08-6-7-07/14/2022 and SIB-SC-G06-6-7-07/14/2022; the 1,2,3,4,7,8-HxCDF results in samples SIB-SC-F08-6-7-07/14/2022, SIB-SC-F08-9-10-07/14/2022, SIB-SC-F08-10-11-07/14/2022, and SIB-SC-G06-7-8-07/14/2022; the 1,2,3,6,7,8-HxCDF result in sample SIB-SC-F08-6-7-07/14/2022; the 1,2,3,4,6,7,8-HpCDF results in samples SIB-SC-F08-6-7-07/14/2022, SIB-SC-F08-7-8-07/14/2022, SIB-SC-F08-9-10-07/14/2022, and SIB-SC-F08-10-11-07/14/2022; and the 1,2,3,4,6,7,8,9-OCDF result in sample SIB-SC-F08-6-7-07/14/2022 are qualified U-MBL. Note that the “detect_flag” field in the EDD is changed from “Y” to “N” for the affected results.

Rinsate Blanks – Rinse blank EB01-07/12/2022 (results reported in SDG 20046) is associated with all samples with results reported in this SDG that were sampled on 7/9/22. The rinse blank was free from contamination.

Rinse blank EB02-07/13/2022 (results reported in SDG 20046) is associated with all samples with results reported in this SDG that were sampled on 7/14/22. The rinse blank was free from contamination.

Qualification: None required.

Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) – LCS/LCSD %Rs and RPDs were within QAPP control limits.

Qualification: None required.

Surrogates – All surrogates (labeled standards) were within control limits.

Qualification: None required.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) – No MS/MSD was performed with this SDG.

Qualification: None required.

Field Duplicate – No field duplicates were submitted with this SDG.

Qualification: None required.

Compound Quantitation – Analyte non-detections were reported as the EDL and qualified U. Analytes detected between the EDL and PQL were reported as J-qualified results by the laboratory. These J qualifiers were retained unless superseded by a more severe qualifier.

If a detected analyte has an ion ratio outside the characteristic ion ratio window, the result is reported as an estimated maximum potential concentration. All results reported as an EMPC (a “K” flag is present in the laboratory qualifier) are qualified J-EMPC unless superseded by a higher priority qualifier.

2,3,7,8-TCDF is not fully resolved on the DB-5MS column; when detected above the PQL on the DB-5MS column, the result was confirmed on a DB-225 column using the instrument ID listed in the case narrative.

In cases where two results are reported for 2,3,7,8-TCDF for a sample, the result from the DB-225 column is selected for use and the result from the DB-5MS is qualified DNR-EXC.

In cases where a target analyte is detected at a concentration above the calibrated range, the laboratory's practice is to report the result with a laboratory qualifier of E without running a dilution so long as the detector is not saturated. The OCDD results for 2 affected samples are qualified J-ACR.

Qualification: The following results are qualified:

- All results reported with a laboratory qualifier of K are qualified J with reason code EMPC.
- All 2,3,7,8-TCDF results reported from the DB-5MS column that are paired with a 2,3,7,8-TCDF result from the DB-225 column are qualified DNR, reason code EXC; note that the reportable_result field for these results are populated with "Yes" by the laboratory and are changed to "No" for the affected results.
- Two OCDD results reported with laboratory qualifiers of E are qualified J with reason code ACR; note that the reportable_result field for these results is populated with "No" by the laboratory and is changed to "Yes" for the affected results.
- One total heptachloro-p-dioxin result reported with a laboratory qualifier of E has the reportable_result field populated with "No" by the laboratory and is changed to "Yes". Although total congener results are not validated, this result is reportable.

Qualification Summary Table (results in pg/g):

Sample	Analyte	Lab Value	Lab Qualifier	Validated Value	Validated Qualifier	Reason Code

The following Stage 2A review was performed on the requested analyses. No results were rejected, and analytical completeness is 100%.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No completeness issues were noted.

Qualification: None required.

Sample Delivery and Condition – All samples arrived intact at the laboratory in acceptable condition and temperature and were properly preserved. No other discrepancies were noted.

Qualification: None required.

Holding Times – All samples were prepared and analyzed within their required holding times.

Qualification: None required.

Method Blanks – The method 1613B method bank was contaminated with target analytes including the following:

- 1,2,3,4,6,7,8,9-OCDD at 0.856 pg/g, leading to a qualification limit of 4.28 pg/g
- 1,2,3,4,6,7,8-HpCDF at 0.292 pg/g, leading to a qualification limit of 1.46 pg/g

Detections in associated samples less than or equal to the qualification limits should be qualified U-MBL.

Qualification: The following results were qualified U-MBL; the detect_flag for the affected results is changed from Y to N.

- The 1,2,3,4,6,7,8-HpCDF results in samples SIB-SC-E03-9-10-08/17/2022, SIB-SC-E08-6-7-08/05/2022, SIB-SC-E08-7-8-08/05/2022, SIB-SC-F13-6-7-08/08/2022, SIB-SC-F14-9-10-08/08/2022, and SIB-SC-F14-10-11-08/08/2022

Rinse Blanks – Rinse blank EB06-08/04/2022 (results reported in SDG 20187) is associated with all samples with results reported in this SDG that were sampled on 08/02/2022, 08/04/2022, and 08/05/2022. The rinse blank was contaminated with multiple PCDD/PCDF compounds; however, all detected results in this EB were not substantially different from those reported in the method blank associated with this EB. The detected results reported for EB06-08/04/2022 represent contamination associated with aqueous sample preparation and are not related to cross-contamination in the field. No additional qualification is required.

Rinse blank EB07-08/09/2022 (results reported in SDG 20187) is associated with all samples with results reported in this SDG that were sampled on 08/08/2022. The rinse blank was contaminated with the following analytes:

- 1,2,3,4,6,7,8-HpCDD at 1.53 pg/L, leading to a qualification limit of 0.765 pg/g
- 1,2,3,4,6,7,8,9-OCDD at 2.79 pg/L, leading to a qualification limit of 1.395 pg/g
- 1,2,3,4,7,8-HxCDF at 0.902 pg/L, leading to a qualification limit of 0.451 pg/g
- 1,2,3,4,6,7,8-HpCDF at 1.85 pg/L, leading to a qualification limit of 0.925 pg/g

Rinse blank EB08-08/21/2022 (results reported in SDG 20283) is associated with all samples with results reported in this SDG that were sampled on 08/17/2022 and 08/18/2022. The rinse blank was contaminated with 1,2,3,4,6,7,8,9-OCDD at 4.36 pg/L; however, the OCDD result was not substantially different from that reported in the method blank associated with this EB. The detected result reported for EB08-08/21/2022 represents contamination associated with aqueous sample preparation and is not related to cross-contamination in the field. No additional qualification is required.

Detections in associated samples less than or equal to the qualification limits should be qualified U-EBL.

Qualification: The following results were qualified U-EBL; the detect_flag for the affected results is changed from Y to N.

- The 1,2,3,4,7,8-HxCDF result in sample SIB-SC-F14-6-7-08/08/2022
- The 1,2,3,4,6,7,8-HpCDF results in samples SIB-SC-F13-6-7-08/08/2022, SIB-SC-F14-9-10-08/08/2022, and SIB-SC-F14-10-11-08/08/2022

Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) – LCS/LCSD %Rs and RPDs were within QAPP control limits.

Qualification: None required.

Surrogates – All surrogates (labeled standards) were within control limits.

Qualification: None required.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) – An MS/MSD was performed using sample SIB-SC-D13-6-7-08/02/2022. The MS had a %R outside of control limits for 1,2,3,4,6,7,8,9-OCDD, however, the sample concentrations were >4x the spike concentration and the %R results are not applicable. All RPDs were within control limits.

Qualification: None required.

Field Duplicate – No field duplicate was submitted with this SDG.

Qualification: None required.

Compound Quantitation – Analyte non-detections were reported as the EDL and qualified U. Analytes detected between the EDL and PQL were reported as J-qualified results by the laboratory. These J qualifiers were retained unless superseded by a more severe qualifier.

If a detected analyte has an ion ratio outside the characteristic ion ratio window, the result is reported as an estimated maximum potential concentration. All results reported as an EMPC (a “K” flag is present in the laboratory qualifier) are qualified J-EMPC unless superseded by a higher priority qualifier.

2,3,7,8-TCDF is not fully resolved on the DB-5MS column; when detected above the PQL on the DB-5MS column, the result was confirmed on a DB-225 column using the instrument ID listed in the case narrative. In cases where two results are reported for 2,3,7,8-TCDF for a sample, the result from the DB-225 column is selected for use and the result from the DB-5MS is qualified DNR-EXC.

In cases where a target analyte is detected at a concentration above the calibrated range, the laboratory’s practice is to report the result with a laboratory qualifier of E without running a dilution so long as the detector is not saturated. The OCDD results for 6 affected samples are qualified J-ACR.

***Qualification:* The following results are qualified:**

- All results reported with a laboratory qualifier of K are qualified J with reason code EMPC.
- All 2,3,7,8-TCDF results reported from the DB-5MS column that are paired with a 2,3,7,8-TCDF result from the DB-225 column are qualified DNR, reason code EXC; note that the reportable_result field for these results are populated with “Yes” by the laboratory and are changed to “No” for the affected results.
- Six OCDD results reported with a laboratory qualifier of E are qualified J with reason code ACR; note that the reportable_result field for these results are populated with “No” by the laboratory and are changed to “Yes” for the affected results.

Qualification Summary Table (results in pg/g):

Sample	Analyte	Lab Value	Lab Qualifier	Validated Value	Validated Qualifier	Reason Code

The following Stage 2A review was performed on the requested analyses. No results were rejected, and analytical completeness is 100%.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No completeness issues were noted.

Qualification: None required.

Sample Delivery and Condition – All samples arrived intact at the laboratory in acceptable condition and temperature and were properly preserved. No other discrepancies were noted.

Qualification: None required.

Holding Times – All samples were prepared and analyzed within their required holding times.

Qualification: None required.

Method Blanks – The method 1613B method bank was contaminated with target analytes including the following:

- 1,2,3,4,6,7,8,9-OCDD at 0.616 pg/g, leading to a qualification limit of 3.08 pg/g
- 1,2,3,4,6,7,8-HpCDF at 0.34 pg/g, leading to a qualification limit of 1.7 pg/g

Detections in associated samples less than or equal to the qualification limits should be qualified U-MBL.

Qualification: The following results were qualified U-MBL; the detect_flag for the affected results is changed from Y to N.

- **The 1,2,3,4,6,7,8-HpCDF results in samples SIB-SC-H06-6-7-07/26/2022, SIB-SC-H08-7-8-07/26/2022, SIB-SC-H08-8-8.3-07/26/2022, SIB-SC-H07-6-7-07/26/2022, and SIB-SC-O04-8-9-08/25/2022**

Rinse Blanks – Rinse blank EB05-07/26/2022 (results reported in SDG 20123) is associated with all samples with results reported in this SDG that were sampled on 7/26/22. The rinse blank was free from contamination.

Rinse blank EB06-08/04/2022 (results reported in SDG 202187) is associated with all samples with results reported in this SDG that were sampled on 8/5/22. The rinse blank was contaminated with multiple PCDD/PCDF compounds; however, all detected results in this EB were not substantially different from those reported in the method blank associated with this EB. The detected results reported for EB06-08/04/2022 represent contamination associated with aqueous sample preparation and are not related to cross-contamination in the field. No additional qualification is required.

Rinse blank EB07-08/09/2022 (results reported in SDG 20187) is associated with all samples with results reported in this SDG that were sampled on 8/10/23. The rinse blank was contaminated with the following analytes:

- 1,2,3,4,6,7,8-HpCDD at 1.53 pg/L, leading to a qualification limit of 0.765
- 1,2,3,4,6,7,8,9-OCDD at 2.79 pg/L, leading to a qualification limit of 1.395
- 1,2,3,4,7,8-HxCDF at 0.902 pg/L, leading to a qualification limit of 0.451
- 1,2,3,4,6,7,8-HpCDF at 1.85 pg/L, leading to a qualification limit of 0.925 pg/g

Rinse blank EB08-08/21/2022 (results reported in SDG 20283) is associated with all samples with results reported in this SDG that were sampled on 08/18/2022. The rinse blank was contaminated with 1,2,3,4,6,7,8,9-OCDD at 4.36 pg/L; however, the OCDD result was not substantially different from that reported in the method blank associated with this EB. The detected result reported for EB08-08/21/2022 represents contamination associated with aqueous sample preparation and is not related to cross-contamination in the field. No additional qualification is required.

Rinse blank EB09-08/24/2022 (results reported in SDG 20283) is associated with all samples with results reported in this SDG that were sampled on 8/23/22 and 8/25/22. The rinse blank was contaminated with almost all target analytes, including:

- 1,2,3,7,8-PeCDD at 2.36 pg/L, leading to a qualification limit of 1.18 pg/g
- 1,2,3,4,7,8-HxCDD at 1.58 pg/L, leading to a qualification limit of 0.790 pg/g
- 1,2,3,6,7,8-HxCDD at 1.58 pg/L, leading to a qualification limit of 0.790 pg/g
- 1,2,3,7,8,9-HxCDD at 1.84 pg/L, leading to a qualification limit of 0.920 pg/g
- 1,2,3,4,6,7,8-HpCDD at 1.39 pg/L, leading to a qualification limit of 0.695 pg/g
- 1,2,3,4,6,7,8,9-OCDD at 2.49 pg/L; this result is comparable to the associated aqueous method blank result and not indicative of potential cross-contamination
- 1,2,3,7,8-PeCDF at 2.78 pg/L, leading to a qualification limit of 1.39 pg/g

- 2,3,4,7,8-PeCDF at 2.34 pg/L, leading to a qualification limit of 1.17 pg/g
- 1,2,3,4,7,8-HxCDF at 2.32 pg/L, leading to a qualification limit of 1.16 pg/g
- 1,2,3,6,7,8-HxCDF at 1.97 pg/L, leading to a qualification limit of 0.985 pg/g
- 2,3,4,6,7,8-HxCDF at 1.15 pg/L, leading to a qualification limit of 0.575 pg/g
- 1,2,3,7,8,9-HxCDF at 1.37 pg/L, leading to a qualification limit of 0.685 pg/g
- 1,2,3,4,6,7,8-HpCDF at 1.21 pg/L; this result is comparable to the associated aqueous method blank result and not indicative of potential cross-contamination
- 1,2,3,4,7,8,9-HpCDF at 1.37 pg/L, leading to a qualification limit of 0.685 pg/g

Detections in associated samples less than or equal to the qualification limits should be qualified U-EBL.

Qualification: The following results were qualified U-EBL; the detect_flag for the affected results is changed from Y to N.

- The 1,2,3,7,8-PeCDD results in samples SIB-SC-O04-6-7-08/25/2022 and SIB-SC-O04-7-8-08/25/2022
- The 1,2,3,7,8-PeCDF results in samples SIB-SC-M04-7-7.9-08/23/2022, SIB-SC-O04-6-7-08/25/2022, and SIB-SC-O04-7-8-08/25/2022

Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) – LCS/LCSD %Rs and RPDs were within QAPP control limits.

Qualification: None required.

Surrogates – All surrogates (labeled standards) were within control limits.

Qualification: None required.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) – An MS/MSD was performed using sample SIB-SC-F35-18-19-08/05/2022. The MS and MSD had %R outside of control limits for 1,2,3,4,6,7,8-HpCDD, 1,2,3,4,6,7,8,9-OCDD, and 1,2,3,4,6,7,8,9-OCDF, however, the sample concentrations were >4x the spike concentration and the %R results are not applicable. All RPDs were within control limits.

Qualification: None required.

Field Duplicate – No field duplicate was submitted with this SDG.

Qualification: None required.

Compound Quantitation – Analyte non-detections were reported as the EDL and qualified U. Analytes detected between the EDL and PQL were reported as J-qualified results by the laboratory. These J qualifiers were retained unless superseded by a more severe qualifier.

If a detected analyte has an ion ratio outside the characteristic ion ratio window, the result is reported as an estimated maximum potential concentration. All results reported as an EMPC (a “K” flag is present in the laboratory qualifier) are qualified J-EMPC unless superseded by a higher priority qualifier.

2,3,7,8-TCDF is not fully resolved on the DB-5MS column; when detected above the PQL on the DB-5MS column, the result was confirmed on a DB-225 column using the instrument ID listed in the case narrative. In cases where two results are reported for 2,3,7,8-TCDF for a sample, the result from the DB-225 column is selected for use and the result from the DB-5MS is qualified DNR-EXC.

In cases where a target analyte is detected at a concentration above the calibrated range, the laboratory's practice is to report the result with a laboratory qualifier of E without running a dilution so long as the detector is not saturated. The OCDD results for 8 affected samples are qualified J-ACR.

Qualification: The following results are qualified:

- All results reported with a laboratory qualifier of K are qualified J with reason code EMPC.
- All 2,3,7,8-TCDF results reported from the DB-5MS column that are paired with a 2,3,7,8-TCDF result from the DB-225 column are qualified DNR, reason code EXC; note that the reportable_result field for these results are populated with “Yes” by the laboratory and are changed to “No” for the affected results.
- Eight OCDD results reported with a laboratory qualifier of E are qualified J with reason code ACR; note that the reportable_result field for these results are populated with “No” by the laboratory and are changed to “Yes” for the affected results.
- Four total heptachloro-p-dioxin results reported with a laboratory qualifier of E have the reportable_result field populated with “No” by the laboratory and are changed to “Yes”. Although total congener results are not validated, these results are reportable.

Qualification Summary Table (results in pg/g):

Sample	Analyte	Lab Value	Lab Qualifier	Validated Value	Validated Qualifier	Reason Code

The following Stage 2A review was performed on the requested analyses. No results were rejected, and analytical completeness is 100%.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No completeness issues were noted.

Qualification: None required.

Sample Delivery and Condition – All samples arrived intact at the laboratory in acceptable condition and temperature and were properly preserved. No other discrepancies were noted.

Qualification: None required.

Holding Times – All samples were prepared and analyzed within their required holding times.

Qualification: None required.

Method Blanks – The method 1613B method bank was contaminated with several target analytes including the following:

- 1,2,3,7,8-PeCDD at 0.11 pg/g, leading to a qualification limit of 0.55 pg/g
- 1,2,3,6,7,8-HxCDD at 0.09 pg/g, leading to a qualification limit of 0.45 pg/g
- 1,2,3,7,8,9-HxCDD at 0.084 pg/g, leading to a qualification limit of 0.42 pg/g
- 1,2,3,4,6,7,8-HpCDD at 0.194 pg/g, leading to a qualification limit of 0.97 pg/g
- 1,2,3,4,6,7,8,9-OCDD at 0.752 pg/g, leading to a qualification limit of 3.76 pg/g
- 2,3,7,8-TCDF at 0.162 pg/g, leading to a qualification limit of 0.81 pg/g
- 1,2,3,7,8-PeCDF at 0.134 pg/g, leading to a qualification limit of 0.67 pg/g
- 2,3,4,7,8-PeCDF at 0.094 pg/g, leading to a qualification limit of 0.47 pg/g

- 1,2,3,4,7,8-HxCDF at 0.144 pg/g, leading to a qualification limit of 0.72 pg/g
- 1,2,3,6,7,8-HxCDF at 0.098 pg/g, leading to a qualification limit of 0.49 pg/g
- 2,3,4,6,7,8-HxCDF at 0.086 pg/g, leading to a qualification limit of 0.43 pg/g
- 1,2,3,7,8,9-HxCDF at 0.082 pg/g, leading to a qualification limit of 0.41 pg/g
- 1,2,3,4,6,7,8-HpCDF at 0.356 pg/g, leading to a qualification limit of 1.78 pg/g
- 1,2,3,4,6,7,8,9-OCDF at 0.31 pg/g, leading to a qualification limit of 1.55 pg/g

Detections in associated samples less than or equal to the qualification limits should be qualified U-MBL.

Qualification: The following results were qualified U-MBL; the detect_flag for the affected results is changed from Y to N.

- The 1,2,3,7,8-PeCDD result in sample SIB-SC-R04-12-13-08/22/2022
- The 1,2,3,6,7,8-HxCDD result in sample SIB-SC-R04-13-13.7-08/22/2022
- The 1,2,3,7,8,9-HxCDD results in samples SIB-SC-R06-10-11-08/22/2022 and SIB-SC-R06-11-11.6-08/22/2022
- The 2,3,7,8-TCDF results in samples SIB-SC-R02-7-8-08/22/2022, SIB-SC-R06-10-11-08/22/2022, SIB-SC-R06-11-11.6-08/22/2022, and SIB-SC-R04-13-13.7-08/22/2022
- The 1,2,3,7,8-PeCDF results in samples SIB-SC-R06-10-11-08/22/2022, SIB-SC-R06-11-11.6-08/22/2022, and SIB-SC-R04-13-13.7-08/22/2022
- The 2,3,4,7,8-PeCDF results in samples SIB-SC-R06-10-11-08/22/2022 and SIB-SC-R06-11-11.6-08/22/2022
- The 1,2,3,4,7,8-HxCDF results in samples SIB-SC-R06-10-11-08/22/2022, SIB-SC-R06-11-11.6-08/22/2022, and SIB-SC-R04-13-13.7-08/22/2022
- The 1,2,3,6,7,8-HxCDF result in sample SIB-SC-R04-13-13.7-08/22/2022
- The 2,3,4,6,7,8-HxCDF results in samples SIB-SC-R06-10-11-08/22/2022 and SIB-SC-R04-13-13.7-08/22/2022
- The 1,2,3,7,8,9-HxCDF result in sample SIB-SC-R04-12-13-08/22/2022,
- The 1,2,3,4,6,7,8-HpCDF result in sample SIB-SC-R04-13-13.7-08/22/2022

Rinsate Blanks – Rinse blank EB09-08/24/2022 (results reported in SDG 20283) is associated with all samples in this SDG. The rinsate blank was contaminated with almost all target analytes, including:

- 1,2,3,7,8-PeCDD at 2.36 pg/L, leading to a qualification limit of 1.18 pg/g
- 1,2,3,4,7,8-HxCDD at 1.58 pg/L, leading to a qualification limit of 0.790 pg/g
- 1,2,3,6,7,8-HxCDD at 1.58 pg/L, leading to a qualification limit of 0.790 pg/g
- 1,2,3,7,8,9-HxCDD at 1.84 pg/L, leading to a qualification limit of 0.920 pg/g
- 1,2,3,4,6,7,8-HpCDD at 1.39 pg/L, leading to a qualification limit of 0.695 pg/g
- 1,2,3,4,6,7,8,9-OCDD at 2.49 pg/L; this result is comparable to the associated aqueous method blank result and not indicative of potential cross-contamination
- 1,2,3,7,8-PeCDF at 2.78 pg/L, leading to a qualification limit of 1.39 pg/g
- 2,3,4,7,8-PeCDF at 2.34 pg/L, leading to a qualification limit of 1.17 pg/g
- 1,2,3,4,7,8-HxCDF at 2.32 pg/L, leading to a qualification limit of 1.16 pg/g
- 1,2,3,6,7,8-HxCDF at 1.97 pg/L, leading to a qualification limit of 0.985 pg/g
- 2,3,4,6,7,8-HxCDF at 1.15 pg/L, leading to a qualification limit of 0.575 pg/g
- 1,2,3,7,8,9-HxCDF at 1.37 pg/L, leading to a qualification limit of 0.685 pg/g
- 1,2,3,4,6,7,8-HpCDF at 1.21 pg/L; this result is comparable to the associated aqueous method blank result and not indicative of potential cross-contamination
- 1,2,3,4,7,8,9-HpCDF at 1.37 pg/L, leading to a qualification limit of 0.685 pg/g

Detections in associated samples less than or equal to the qualification limits should be qualified U-EBL.

Qualification: The following results were qualified U-EBL; the detect_flag for the affected results is changed from Y to N.

- The 1,2,3,7,8-PeCDD results in samples SIB-SC-R02-7-8-08/22/2022, SIB-SC-R04-7-8-08/22/2022, and SIB-SC-R04-12-13-08/22/2022
- The 1,2,3,4,7,8-HxCDD result in sample SIB-SC-R04-12-13-08/22/2022
- The 1,2,3,6,7,8-HxCDD results in samples SIB-SC-R06-10-11-08/22/2022, SIB-SC-R06-11-11.6-08/22/2022, and SIB-SC-R04-13-13.7-08/22/2022
- The 1,2,3,7,8,9-HxCDD results in samples SIB-SC-R06-10-11-08/22/2022, SIB-SC-R06-11-11.6-08/22/2022, and SIB-SC-R04-12-13-08/22/2022
- The 1,2,3,7,8-PeCDF results in samples SIB-SC-R02-6-7-08/22/2022, SIB-SC-R02-7-8-08/22/2022, SIB-SC-R06-10-11-08/22/2022, SIB-SC-R06-11-11.6-08/22/2022, SIB-SC-R04-7-8-08/22/2022, SIB-SC-R04-12-13-08/22/2022, SIB-SC-R04-13-13.7-08/22/2022, SIB-SC-R06-6-7-08/22/2022, and SIB-SC-R06-7-8-08/22/2022
- The 2,3,4,7,8-PeCDF results in samples SIB-SC-R06-10-11-08/22/2022 and SIB-SC-R06-11-11.6-08/22/2022
- The 1,2,3,4,7,8-HxCDF results in samples SIB-SC-R06-10-11-08/22/2022, SIB-SC-R06-11-11.6-08/22/2022, and SIB-SC-R04-13-13.7-08/22/2022
- The 1,2,3,6,7,8-HxCDF results in samples SIB-SC-R06-10-11-08/22/2022 and SIB-SC-R04-13-13.7-08/22/2022
- The 2,3,4,6,7,8-HxCDF results in samples SIB-SC-R06-10-11-08/22/2022 and SIB-SC-R04-13-13.7-08/22/2022
- The 1,2,3,7,8,9-HxCDF result in sample SIB-SC-R04-12-13-08/22/2022

Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) – LCS/LCSD %Rs and RPDs were within QAPP control limits.

Qualification: None required.

Surrogates – All surrogates (labeled standards) were within control limits.

Qualification: None required.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) – MS/MSD analysis was performed on sample SIB-SC-R02-6-7-08/22/2022. The 1,2,3,4,6,7,8,9-OCDD recovery was extremely low in the MS and high in the MSD, however, the sample concentration was >4x the spike concentration and the %R results are not applicable. All other %Rs and RPDs were within control limits.

Qualification: None required.

Field Duplicate – No field duplicates were submitted with this SDG.

Qualification: None required.

Compound Quantitation – Analyte non-detections were reported as the EDL and qualified U. Analytes detected between the EDL and PQL were reported as J-qualified results by the laboratory. These J qualifiers were retained unless superseded by a more severe qualifier.

If a detected analyte has an ion ratio outside the characteristic ion ratio window, the result is reported as an estimated maximum potential concentration. All results reported as an EMPC (a “K” flag is present in the laboratory qualifier) are qualified J-EMPC unless superseded by a higher priority qualifier.

2,3,7,8-TCDF is not fully resolved on the DB-5MS column; when detected above the PQL on the DB-5MS column, the result was confirmed on a DB-225 column using the instrument ID listed in the case narrative.

In cases where two results are reported for 2,3,7,8-TCDF for a sample, the result from the DB-225 column is selected for use and the result from the DB-5MS is qualified DNR-EXC.

In cases where a target analyte is detected at a concentration above the calibrated range, the laboratory's practice is to report the result with a laboratory qualifier of E without running a dilution so long as the detector is not saturated. The OCDD results for 2 affected samples are qualified J-ACR.

Qualification: The following results are qualified:

- All results reported with a laboratory qualifier of K are qualified J with reason code EMPC.
- All 2,3,7,8-TCDF results reported from the DB-5MS column that are paired with a 2,3,7,8-TCDF result from the DB-225 column are qualified DNR, reason code EXC; note that the reportable_result field for these results are populated with "Yes" by the laboratory and are changed to "No" for the affected results.
- Two OCDD results reported with laboratory qualifiers of E are qualified J with reason code ACR; note that the reportable_result field for these results is populated with "No" by the laboratory and is changed to "Yes" for the affected results.

Qualification Summary Table (results in pg/g):

Sample	Analyte	Lab Value	Lab Qualifier	Validated Value	Validated Qualifier	Reason Code

The following Stage 2A review was performed on the requested analyses. No results were rejected, and analytical completeness is 100%.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No completeness issues were noted.

Qualification: None required.

Sample Delivery and Condition – All samples arrived intact at the laboratory in acceptable condition and temperature and were properly preserved.

Qualification: None required.

Holding Times – All samples were prepared and analyzed within their required holding times.

Qualification: None required.

Method Blanks – The method 1668C method blank associated with prep batch 52751 was contaminated with the following PCBs; associated detections below the qualification threshold should be qualified U.

PCB Congener	Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-3	3.46	17.3
PCB-11	26.5	132.5
PCB-18/30	2.38	11.9
PCB-20/28	4.44	22.2
PCB-31	3.46	17.3
PCB-44/47/65	5.48	27.4
PCB-45/51	1.96	9.8
PCB-49/69	2.42	12.1
PCB-52	4.76	23.8
PCB-56	2.46	12.3
PCB-61/70/74/76	6.78	33.9
PCB-66	4.08	20.4
PCB-86/87/97/109/119/125	4.46	22.3
PCB-90/101/113	4.34	21.7
PCB-95	5.14	25.7
PCB-99	2.04	10.2
PCB-105	1.88	9.4
PCB-110/115	4.76	23.8
PCB-118	3.18	15.9
PCB-129/138/163	3.3	16.5
PCB-135/151	1.82	9.1
PCB-147/149	3.14	15.7
PCB-153/168	2.38	11.9
PCB-156/157	1.78	8.9
PCB-167	1.28	6.4
PCB-174	1.38	6.9
PCB-180/193	1.68	8.4
PCB-187	1.04	5.2
PCB-190	1.06	5.3
PCB-194	2.26	11.3
PCB-197/200	1.06	5.3
PCB-198/199	1.38	6.9

The method 1668C method blank associated with prep batch 53005 was contaminated with the following PCBs; associated detections below the qualification threshold should be qualified U.

PCB Congener	Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-11	37.1	185.5
PCB-20/28	9.42	47.1
PCB-31	5.28	26.4
PCB-61/70/74/76	10.2	51
PCB-86/87/97/109/119/125	9.52	47.6
PCB-90/101/113	10.5	52.5
PCB-110/115	9.52	47.6
PCB-118	7.38	36.9
PCB-129/138/163	9.12	45.6

PCB Congener	Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-180/193	5.36	26.8

The following results are qualified U-MBL:

- SIB-SC-D13-7-8-08/02/2022: PCB-3, PCB-11
- SIB-SC-D35-18-19-08/04/2022: PCB-11
- SIB-SC-E03-8-9-08/17/2022: PCB-3, PCB-11, PCB-18/30, PCB-20/28, PCB-31, PCB-44/47/65, PCB-56, PCB-66, PCB-105, PCB-156/157
- SIB-SC-E08-6-7-08/05/2022: PCB-3, PCB-11, PCB-18/30, PCB-20/28, PCB-31, PCB-44/47/65, PCB-45/51, PCB-49/69, PCB-52, PCB-56, PCB-61/70/74/76, PCB-66, PCB-86/87/97/109/119/125, PCB-95, PCB-105, PCB-156/157, PCB-194, PCB-198/199

- SIB-SC-F03-12-13-08/18/2022: PCB-11

Qualification: Detections of contaminated compounds detected below the qualification threshold are qualified U, reason code MBL. Affected results are listed above.

Trip Blanks – A trip blank was not submitted with the samples in this SDG.

Qualification: None required.

Equipment Blanks – Equipment blank EB05-07262022 (results reported in SDG 20124) is associated with all sediment samples collected on 7.26.22; equipment blank EB06-08042022 (results reported in SDG 20186) is associated with all sediment samples collected on 8.2.22, 8.4.22, and 8.5.22; Equipment blank EB07-08092022 (results reported in SDG 20186) is associated with all sediment samples collected on 8.8.22 and 8.10.22; equipment blank EB08-08212022 (results reported in SDG 20282) is associated with all sediment samples collected on 8.17.22 and 8.18.22; Equipment blank EB09-08242022 (results reported in SDG 20282) is associated with all sediment samples collected from 8.22.22 through 8.25.22. Due to the differences in mass extracted, the concentrations reported as pg/L in EBs correspond to the same concentration in pg/g in sediment samples. The following PCB congeners were detected in the EBs (does not include PCB congeners considered to be analytical artifacts based on corresponding detections in the associated aqueous MBs). Note that EB contamination is not adjusted for dilution when comparing to sample results.

EB05-07262022

PCB Congener	Concentration (pg/L)	Soil-equivalent Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-3	3.66	3.66	18.3
PCB-4	12.1	12.1	60.5
PCB-8	12.4	12.4	62.0
PCB-16	5.45	5.45	27.25
PCB-17	5.38	5.38	26.9

Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) – All LCS/LCSD %Rs and RPDs were within QAPP control limits.

Qualification: None required.

Surrogates – All surrogates (EISs) were within QAPP control limits.

Qualification: None required.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) – Two MS/MSD analyses were performed on two samples with this SDG. The MS/MSD performed on sample SIB-SC-D13-7-8-08/02/2022 in prep batch 52751 has %Rs and RPDs within control limits with the exception of PCB-105 and PCB-118 recovering extremely low in the MSD and yielding RPD values above control limits. For PCB-118, the sample concentration was >4x the spike concentration and the %R results are not applicable. The PCB-105 and PCB-118 results in the parent sample should be qualified J.

The MS/MSD performed on sample SIB-SC-F03-12-13-08/18/2022 in prep batch 53005. All %Rs were within control limits with the exception of PCB-37 and PCB-118. For PCB-118, the sample concentration was >4x the spike concentration and the %R results are not applicable. For PCB-37, the parent sample should be qualified J. All RPDs were within QAPP control limits with the exception of PCB-118. This result in the parent sample should be qualified J.

***Qualification:* In sample SIB-SC-D13-7-8-08/02/2022, the PCB-105 result is qualified J, reason code MSLX,MSP and the PCB-118 result is qualified J, reason code MSP. In sample SIB-SC-F03-12-13-08/18/2022, the PCB-37 result is qualified J, reason code MSH and the PCB-118 result is qualified J, reason code MSP.**

Field Duplicate – No field duplicates were submitted with this SDG.

Qualification: None required.

Laboratory Duplicate – A laboratory duplicate was not performed in this SDG.

Qualification: None required.

Compound Quantitation – Analyte non-detections were reported as ND with the associated DL, LOD, and LOQ included on the result summary pages. This reporting format is equivalent to reporting non-detected data in the DoD “LOD U” format. Analytes detected between the DL and LOQ were reported as J-qualified results by the laboratory. These J qualifiers were retained unless superseded by a more severe qualifier.

If a detected analyte has an ion ration outside the characteristic ion ratio window, the result is reported as an estimated maximum potential concentration. All results reported as an EMPC are qualified J-EMPC unless superseded by a higher priority qualifier.

The PCB-1 result for sample SIB-SC-E08-6-7-08/05/2022 was reported with a concentration of 0 pg/g and a J qualifier. The raw data shows no response reported for this congener, including no S/N or EDL. In the judgment of the HGL reviewer, this result should be qualified R-VJ.

Qualification: The PCB-1 result for sample SIB-SC-E08-6-7-08/05/2022 is qualified R-VJ.

Qualification Summary Table (results in pg/g):

High-Resolution Gas Chromatography/High-Resolution Mass Spectrometry
PCCDs/PCDFs (EPA Method 1613B)
Stage 2A Review
Data Quality Control (QC)

Site: PHSS-Swan Island Basin	SDG #: 21286
Laboratory: CFA	Project #: DT2002.03.03.01.01
HydroGeoLogic, Inc. Validator: John Tracy	Validation Date: 08.14.23
HGL Peer Reviewer: Ken Rapuano	Peer Review Date: 9.21.23

Client Sample ID	Laboratory Sample ID	Matrix
SIB-SC-G02-0-1-08/18/2022	21286001	Sediment
SIB-SC-I05-0-1-07/28/2022	21286002	Sediment
SIB-SC-K03-0-1-07/27/2022	21286003	Sediment
SIB-SC-L09-0-1-08/21/2022	21286004	Sediment

The following Stage 2A review was performed on the requested analyses. No results were rejected, and analytical completeness is 100%.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No completeness issues were noted.

Qualification: None required.

Sample Delivery and Condition – All samples arrived intact at the laboratory in acceptable condition and temperature and were properly preserved. No other discrepancies were noted.

Qualification: None required.

Holding Times – All samples were prepared and analyzed within their required holding times.

Qualification: None required.

Method Blanks – The method 1613B method bank was contaminated with several target analytes including the following:

- 1,2,3,7,8-PeCDD at 0.11 pg/g, leading to a qualification limit of 0.55 pg/g
- 1,2,3,6,7,8-HxCDD at 0.09 pg/g, leading to a qualification limit of 0.45 pg/g
- 1,2,3,7,8,9-HxCDD at 0.084 pg/g, leading to a qualification limit of 0.42 pg/g
- 1,2,3,4,6,7,8-HpCDD at 0.194 pg/g, leading to a qualification limit of 0.97 pg/g
- 1,2,3,4,6,7,8,9-OCDD at 0.752 pg/g, leading to a qualification limit of 3.76 pg/g
- 2,3,7,8-TCDF at 0.162 pg/g, leading to a qualification limit of 0.81 pg/g
- 1,2,3,7,8-PeCDF at 0.134 pg/g, leading to a qualification limit of 0.67 pg/g
- 2,3,4,7,8-PeCDF at 0.094 pg/g, leading to a qualification limit of 0.47 pg/g
- 1,2,3,4,7,8-HxCDF at 0.144 pg/g, leading to a qualification limit of 0.72 pg/g
- 1,2,3,6,7,8-HxCDF at 0.098 pg/g, leading to a qualification limit of 0.49 pg/g
- 2,3,4,6,7,8-HxCDF at 0.086 pg/g, leading to a qualification limit of 0.43 pg/g
- 1,2,3,7,8,9-HxCDF at 0.082 pg/g, leading to a qualification limit of 0.41 pg/g
- 1,2,3,4,6,7,8-HpCDF at 0.356 pg/g, leading to a qualification limit of 1.78 pg/g
- 1,2,3,4,6,7,8,9-OCDF at 0.31 pg/g, leading to a qualification limit of 1.55 pg/g

Detections in associated samples less than or equal to the qualification limits should be qualified U-MBL.

Qualification: The following results were qualified U-MBL; the detect_flag for the affected results is changed from Y to N.

- The 1,2,3,7,8-PeCDD result in sample SIB-SC-L09-0-1-08/21/2022
- The 2,3,7,8-TCDF result in sample SIB-SC-L09-0-1-08/21/2022
- The 1,2,3,7,8-PeCDF results in samples SIB-SC-K03-0-1-07/27/2022 and SIB-SC-L09-0-1-08/21/2022
- The 2,3,4,7,8-PeCDF result in sample SIB-SC-L09-0-1-08/21/2022
- The 1,2,3,4,7,8-HxCDF result in sample SIB-SC-L09-0-1-08/21/2022
- The 1,2,3,6,7,8-HxCDF result in sample SIB-SC-L09-0-1-08/21/2022
- The 2,3,4,6,7,8-HxCDF result in sample SIB-SC-L09-0-1-08/21/2022

Rinsate Blanks – Rinse blank EB05-07/26/2022 (results reported in SDG 20123) is associated with all samples with results reported in this SDG with sample dates of 7/27/22 and 7/28/22. The rinse blank was free from contamination.

Rinse blank EB08-08/21/2022 (results reported in SDG 20283) is associated with all samples in this SDG with sample dates of 08/18/22 and 8/21/22. The rinse blank was contaminated with 1,2,3,4,6,7,8,9-OCDD at 4.36 pg/L; however, the OCDD result was not substantially different from that reported in the method blank associated with this EB. The detected result reported for EB08-08/21/2022 represents contamination associated with aqueous sample preparation and is not related to cross-contamination in the field. No additional qualification is required.

Qualification: None required.

Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) – LCS/LCSD %Rs and RPDs were within QAPP control limits.

Qualification: None required.

Surrogates – All surrogates (labeled standards) were within control limits.

Qualification: None required.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) – No MS/MSD analysis was performed with this SDG.

Qualification: None required.

Field Duplicate – No field duplicates were submitted with this SDG.

Qualification: None required.

Compound Quantitation – Analyte non-detections were reported as the EDL and qualified U. Analytes detected between the EDL and PQL were reported as J-qualified results by the laboratory. These J qualifiers were retained unless superseded by a more severe qualifier.

If a detected analyte has an ion ratio outside the characteristic ion ratio window, the result is reported as an estimated maximum potential concentration. All results reported as an EMPC (a “K” flag is present in the laboratory qualifier) are qualified J-EMPC unless superseded by a higher priority qualifier.

2,3,7,8-TCDF is not fully resolved on the DB-5MS column; when detected above the PQL on the DB-5MS column, the result was confirmed on a DB-225 column using the instrument ID listed in the case narrative. In cases where two results are reported for 2,3,7,8-TCDF for a sample, the result from the DB-225 column is selected for use and the result from the DB-5MS is qualified DNR-EXC.

In cases where a target analyte is detected at a concentration above the calibrated range, the laboratory's practice is to report the result with a laboratory qualifier of E without running a dilution so long as the detector is not saturated. The OCDD results for 2 affected samples are qualified J-ACR.

Qualification: The following results are qualified:

- All results reported with a laboratory qualifier of K are qualified J with reason code EMPC.
- All 2,3,7,8-TCDF results reported from the DB-5MS column that are paired with a 2,3,7,8-TCDF result from the DB-225 column are qualified DNR, reason code EXC; note that the reportable_result field for these results are populated with "Yes" by the laboratory and are changed to "No" for the affected results.
- Two OCDD results reported with laboratory qualifiers of E are qualified J with reason code ACR; note that the reportable_result field for these results is populated with "No" by the laboratory and is changed to "Yes" for the affected results.

Qualification Summary Table (results in pg/g):

High-Resolution Gas Chromatography/High-Resolution Mass Spectrometry
PCB Congeners (EPA Method 1668C)
Stage 2A Review
Data Quality Control (QC)

Site: PHSS-Swan Island Basin	SDG #: 21287
Laboratory: CFA	Project #: DT2002.03.03.01.01
HydroGeoLogic, Inc. Validator: John Tracy	Validation Date: 09.14.2023
HGL QC Reviewer: Ken Rapuano	Peer Review Date: 09.21.23

Client Sample ID	Laboratory Sample ID	Matrix
SIB-SC-I05-0-1-07/28/2022	21287001	Sediment
SIB-SC-K03-0-1-07/27/2022	21287002	Sediment
SIB-SC-L09-0-1-08/21/2022	21287003	Sediment

The following Stage 2A review was performed on the requested analyses. No results were rejected, and analytical completeness is 100%.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No completeness issues were noted.

Qualification: None required.

Sample Delivery and Condition – All samples arrived intact at the laboratory in acceptable condition and temperature and were properly preserved.

Qualification: None required.

Holding Times – Samples SIB-SC-K03-0-1-07/27/2022 and SIB-SC-I05-0-1-07/28/2022 were extracted 6 and 5 days outside the 1 year holding time for frozen archived samples. The results reported for these samples should be qualified J (detections) or UJ (non-detections), reason code HTP.

Qualification: All results for samples SIB-SC-K03-0-1-07/27/2022 and SIB-SC-I05-0-1-07/28/2022 are qualified J (detections) or UJ (non-detections), reason code HTP.

Method Blanks – The method 1668C method blank associated with all samples in this SDG was contaminated with the following PCBs; associated detections below the qualification threshold should be qualified U.

PCB Congener	Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-20/28	7.84	39.2
PCB-44/47/65	16.7	83.5
PCB-52	18.4	92
PCB-61/70/74/76	19.8	99
PCB-66	10.1	50.5
PCB-86/87/97/109/119/125	13	65
PCB-90/101/113	18.7	93.5
PCB-95	21.4	107
PCB-99	7.84	39.2
PCB-110/115	21.6	108
PCB-118	13.6	68

PCB Congener	Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-129/138/163	13.5	67.5
PCB-135/151	7	35
PCB-147/149	10.1	50.5
PCB-153/168	9.46	47.3

All detected sediment results are greater than the associated qualification threshold and no qualification is required.

Qualification: None required.

Trip Blanks – A trip blank was not submitted with the samples in this SDG.

Qualification: None required.

Equipment Blanks –Equipment blank EB05-07262022 (results reported in SDG 20124) is associated with all sediment samples collected on 7.27.22 and 7.28.22; equipment blank EB08-08212022 (results reported in SDG 20282) is associated with all sediment samples collected on 8.21.22. Due to the differences in mass extracted, the concentrations reported as pg/L in EBs correspond to the same concentration in pg/g in sediment samples. The following PCB congeners were detected in the EBs (does not include PCB congeners considered to be analytical artifacts based on corresponding detections in the associated aqueous MBs). Note that EB contamination is not adjusted for dilution when comparing to sample results.

EB05-07262022

PCB Congener	Concentration (pg/L)	Soil-equivalent Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-3	3.66	3.66	18.3
PCB-4	12.1	12.1	60.5
PCB-8	12.4	12.4	62.0
PCB-16	5.45	5.45	27.25
PCB-17	5.38	5.38	26.9
PCB-18/30	12.4	12.4	62.0
PCB-20/28	11.9	11.9	59.5
PCB-21/33	6.41	6.41	32.05
PCB-22	5.47	5.47	27.35
PCB-26/29	3.52	3.52	17.6
PCB-31	12.1	12.1	60.5
PCB-32	3.95	3.95	19.75
PCB-37	3.27	3.27	16.35
PCB-40/71	4.91	4.91	24.55
PCB-44/47/65	12.0	12.0	60.0
PCB-45/51	3.41	3.41	17.05
PCB-49/69	5.65	5.65	28.25
PCB-50/53	2.89	2.89	14.45
PCB-52	13.5	13.5	67.25
PCB-66	5.70	5.70	28.5
PCB-86/87/97/109/119/125	8.95	8.95	44.75
PCB-95	10.3	10.3	51.5
PCB-99	4.13	4.13	20.65
PCB-105	4.44	4.44	22.2
PCB-110/115	11.8	11.8	59.0
PCB-118	8.48	8.48	42.4

PCB Congener	Concentration (pg/L)	Soil-equivalent Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-135/151	3.86	3.86	19.3
PCB-147/149	6.55	6.55	32.75
PCB-187	3.72	3.72	18.6

The following results were qualified U-EBL due to contamination in EB05-07262022

- SIB-SC-K03-0-1-07/27/2022: PCB-8

EB08-08212022

PCB Congener	Concentration (pg/L)	Soil-equivalent Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-4	31.7	31.7	158.5
PCB-8	43.3	43.3	216.5
PCB-11	659	659	3295
PCB-12/13	27.7	27.7	138.5
PCB-15	16.7	16.7	83.5
PCB-16	11.0	11.0	55.0
PCB-17	14.9	14.9	74.5
PCB-18/30	29.3	29.3	146.5
PCB-19	6.66	6.66	33.3
PCB-27	2.99	2.99	14.95
PCB-32	8.12	8.12	40.6
PCB-35	5.6	5.6	28
PCB-40/71	8.22	8.22	41.1
PCB-42	5.46	5.46	27.3
PCB-48	5.08	5.08	25.4
PCB-84	8.55	8.55	42.75
PCB-92	6.32	6.32	31.6
PCB-99	12.5	12.5	62.5
PCB-132	4.77	4.77	23.85
PCB-174	2.39	2.39	11.95
PCB-179	1.32	1.32	6.6
PCB-183/185	2.11	2.11	10.55

The following results were qualified U-EBL due to contamination in EB08-08212022

- SIB-SC-L09-0-1-08/21/2022: PCB-8, PCB-15, PCB-16, PCB-17

The following results were qualified U-EBH due to contamination in EB08-08212022

- SIB-SC-L09-0-1-08/21/2022: PCB-11

Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) – All LCS/LCSD %Rs and RPDs were within QAPP control limits.

Qualification: None required.

Surrogates – All surrogates (EISs) were within QAPP control limits.

Qualification: None required.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) – MS/MSD analyses were performed on sample SIB-SC-I05-0-1-07/28/2022 with this SDG. All %Rs were within control limits with the exception of PCB-1, PCB-3, PCB-4, PCB-15, PCB-37, PCB-77, PCB-105, PCB-114, PCB-118, PCB-123, PCB-156/157, PCB-167,

PCB-189, PCB-202, PCB-206, and PCB-208. For PCB-105, PCB-118, PCB-156/157, PCB-167, the sample concentration was >4x the spike concentration and the %R results are not applicable. The remaining failures should be qualified J in the parent sample. All RPDs were within control limits with the exception of PCB-1, PCB-3, PCB-77, PCB-105, PCB-118, and PCB-123. These results should be qualified J in the parent sample.

Qualification: In sample SIB-SC-I05-0-1-07/28/2022, the PCB-4, PCB-15, PCB-37, PCB-114, PCB-206, and PCB-208 results are qualified J, reason code MSH. The PCB-189 and PCB-202 results are qualified J, reason code MSL. The PCB-105 and PCB-118 results are qualified J, reason code MSP. The PCB-1 and PCB-3 results are qualified J, reason code MSH,MSP. The PCB-77 result is qualified J, reason code MSL,MSH,MSP. The PCB-123 result is qualified J, reason code MSL,MSP.

Field Duplicate – No field duplicates were submitted with this SDG.

Qualification: None required.

Laboratory Duplicate – A laboratory duplicate was not performed in this SDG.

Qualification: None required.

Compound Quantitation – Analyte non-detections were reported as ND with the associated DL, LOD, and LOQ included on the result summary pages. This reporting format is equivalent to reporting non-detected data in the DoD “LOD U” format. Analytes detected between the DL and LOQ were reported as J-qualified results by the laboratory. These J qualifiers were retained unless superseded by a more severe qualifier.

If a detected analyte has an ion ration outside the characteristic ion ratio window, the result is reported as an estimated maximum potential concentration. All results reported as an EMPC are qualified J-EMPC unless superseded by a higher priority qualifier.

Qualification: None required.

Qualification Summary Table (results in pg/g):

Sample	Analyte	Lab Value	Lab Qualifier	Validated Value	Validated Qualifier	Reason Code
SIB-SC-I05-0-1-07/28/2022	2-CHLOROBIPHENYL (1)	918	Jh	918	J	MSH,MSP

The following Stage 2A review was performed on the requested analyses. No results were rejected, and analytical completeness is 100%.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No completeness issues were noted.

Qualification: None required.

Sample Delivery and Condition – All samples arrived intact at the laboratory in acceptable condition and temperature and were properly preserved. No other discrepancies were noted.

Qualification: None required.

Holding Times – All samples were prepared and analyzed within their required holding times.

Qualification: None required.

Method Blanks – The method 1613B method bank was contaminated with several target analytes including the following:

- 1,2,3,7,8-PeCDD at 0.11 pg/g, leading to a qualification limit of 0.55 pg/g
- 1,2,3,6,7,8-HxCDD at 0.09 pg/g, leading to a qualification limit of 0.45 pg/g
- 1,2,3,7,8,9-HxCDD at 0.084 pg/g, leading to a qualification limit of 0.42 pg/g
- 1,2,3,4,6,7,8-HpCDD at 0.194 pg/g, leading to a qualification limit of 0.97 pg/g
- 1,2,3,4,6,7,8,9-OCDD at 0.752 pg/g, leading to a qualification limit of 3.76 pg/g
- 2,3,7,8-TCDF at 0.162 pg/g, leading to a qualification limit of 0.81 pg/g
- 1,2,3,7,8-PeCDF at 0.134 pg/g, leading to a qualification limit of 0.67 pg/g
- 2,3,4,7,8-PeCDF at 0.094 pg/g, leading to a qualification limit of 0.47 pg/g
- 1,2,3,4,7,8-HxCDF at 0.144 pg/g, leading to a qualification limit of 0.72 pg/g
- 1,2,3,6,7,8-HxCDF at 0.098 pg/g, leading to a qualification limit of 0.49 pg/g
- 2,3,4,6,7,8-HxCDF at 0.086 pg/g, leading to a qualification limit of 0.43 pg/g
- 1,2,3,7,8,9-HxCDF at 0.082 pg/g, leading to a qualification limit of 0.41 pg/g
- 1,2,3,4,6,7,8-HpCDF at 0.356 pg/g, leading to a qualification limit of 1.78 pg/g
- 1,2,3,4,6,7,8,9-OCDF at 0.31 pg/g, leading to a qualification limit of 1.55 pg/g

Detections in associated samples less than or equal to the qualification limits should be qualified U-MBL.

Qualification: The following results were qualified U-MBL; the detect_flag for the affected results is changed from Y to N.

- The 1,2,3,7,8-PeCDD results in samples SIB-SC-E23-11-12-07/12/2022, SIB-SC-E23-12-13-07/12/2022, and SIB-SC-F23-8-9-07/13/2022
- The 1,2,3,7,8,9-HxCDD result in sample SIB-SC-F23-9-10-07/13/2022
- The 2,3,7,8-TCDF results in samples SIB-SC-E23-11-12-07/12/2022, SIB-SC-E23-12-13-07/12/2022, SIB-SC-F23-9-10-07/13/2022, and SIB-SC-F23-8-9-07/13/2022
- The 1,2,3,7,8-PeCDF results in samples SIB-SC-E23-11-12-07/12/2022, SIB-SC-E23-12-13-07/12/2022, SIB-SC-F23-9-10-07/13/2022, and SIB-SC-F23-8-9-07/13/2022.
- The 2,3,4,7,8-PeCDF results in samples SIB-SC-F23-9-10-07/13/2022 and SIB-SC-F23-8-9-07/13/2022
- The 1,2,3,4,7,8-HxCDF result in sample SIB-SC-F23-9-10-07/13/2022
- The 1,2,3,6,7,8-HxCDF results in samples SIB-SC-F23-9-10-07/13/2022 and SIB-SC-F23-8-9-07/13/2022
- The 2,3,4,6,7,8-HxCDF results in samples SIB-SC-F23-9-10-07/13/2022 and SIB-SC-F23-8-9-07/13/2022
- The 1,2,3,7,8,9-HxCDF results in samples SIB-SC-E23-11-12-07/12/2022, SIB-SC-E23-12-13-07/12/2022, and SIB-SC-F23-8-9-07/13/2022
- The 1,2,3,4,6,7,8-HpCDF result in sample SIB-SC-F23-9-10-07/13/2022
- The 1,2,3,4,6,7,8,9-OCDF result in sample SIB-SC-F23-9-10-07/13/2022

Rinsate Blanks – Rinse blank EB01-07/12/2022 (results reported in SDG 20046) is associated with all samples with results reported in this SDG that were sampled on 7/12/22. The rinse blank was free from contamination.

Rinse blank EB02-07/13/2022 (results reported in SDG 20046) is associated with all samples with results reported in this SDG that were sampled on 7/13/22. The rinse blank was free from contamination.

Qualification: None required.

Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) – LCS/LCSD %Rs and RPDs were within QAPP control limits.

Qualification: None required.

Surrogates – All surrogates (labeled standards) were within control limits.

Qualification: None required.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) – No MS/MSD analysis was performed with this SDG.

Qualification: None required.

Field Duplicate – No field duplicates were submitted with this SDG.

Qualification: None required.

Compound Quantitation – Analyte non-detections were reported as the EDL and qualified U. Analytes detected between the EDL and PQL were reported as J-qualified results by the laboratory. These J qualifiers were retained unless superseded by a more severe qualifier.

If a detected analyte has an ion ratio outside the characteristic ion ratio window, the result is reported as an estimated maximum potential concentration. All results reported as an EMPC (a "K" flag is present in the laboratory qualifier) are qualified J-EMPC unless superseded by a higher priority qualifier.

2,3,7,8-TCDF is not fully resolved on the DB-5MS column; when detected above the PQL on the DB-5MS column, the result was confirmed on a DB-225 column using the instrument ID listed in the case narrative. In cases where two results are reported for 2,3,7,8-TCDF for a sample, the result from the DB-225 column is selected for use and the result from the DB-5MS is qualified DNR-EXC.

Qualification: The following results are qualified:

- All results reported with a laboratory qualifier of K are qualified J with reason code EMPC.
- All 2,3,7,8-TCDF results reported from the DB-5MS column that are paired with a 2,3,7,8-TCDF result from the DB-225 column are qualified DNR, reason code EXC; note that the reportable_result field for these results are populated with "Yes" by the laboratory and are changed to "No" for the affected results.

Qualification Summary Table (results in pg/g):

Sample	Analyte	Lab Value	Lab Qualifier	Validated Value	Validated Qualifier	Reason Code

The following Stage 2A review was performed on the requested analyses. No results were rejected, and analytical completeness is 100%.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No completeness issues were noted.

Qualification: None required.

Sample Delivery and Condition – All samples arrived intact at the laboratory in acceptable condition and temperature and were properly preserved. No other discrepancies were noted.

Qualification: None required.

Holding Times – All samples were prepared and analyzed within their required holding times.

Qualification: None required.

Method Blanks – The method 1613B method bank was contaminated with the following target analytes:

- 1,2,3,4,6,7,8,9-OCDD at 1.82 pg/g, leading to a qualification limit of 9.1 pg/g
- 2,3,7,8-TCDF at 0.262 pg/g, leading to a qualification limit of 1.31 pg/g

Detections in associated samples less than or equal to the qualification limits should be qualified U-MBL.

Qualification: The following results were qualified U-MBL; the detect_flag for the affected results is changed from Y to N.

- The 1,2,3,4,6,7,8,9-OCDD result in sample SIB-SC-B26-10-11-08/23/2022
- The 2,3,7,8-TCDF results in samples SIB-SC-B04-7-8-09/04/2022, SIB-SC-B04-8-9-09/04/2022, SIB-SC-B26-6-7-08/23/2022, SIB-SC-B26-10-11-08/23/2022, SIB-SC-C11-10-11-08/20/2022, SIB-SC-C11-11-12-08/20/2022, and SIB-SC-C14-7-8-08/04/2022

Rinsate Blanks – Rinse blank EB06-08/04/2022 (results reported in SDG 202187) is associated with all samples in this SDG with sample dates of 8/3/22 and 8/4/22. The rinse blank was contaminated with multiple PCDD/PCDF compounds; however, all detected results in this EB were not substantially different from those reported in the method blank associated with this EB. The detected results reported for EB06-08/04/2022 represent contamination associated with aqueous sample preparation and are not related to cross-contamination in the field. No additional qualification is required.

Rinse blank EB08-08/21/2022 (results reported in SDG 20283) is associated with all samples in this SDG with a sample date of 08/20/22. The rinse blank was contaminated with 1,2,3,4,6,7,8,9-OCDD at 4.36 pg/L; however, the OCDD result was not substantially different from that reported in the method blank associated with this EB. The detected result reported for EB08-08/21/2022 represents contamination associated with aqueous sample preparation and is not related to cross-contamination in the field. No additional qualification is required.

Rinse blank EB09-08/24/2022 (results reported in SDG 20283) is associated with all samples in this SDG with a sample date of 8/23/22. The rinsate blank was contaminated with almost all target analytes, including:

- 1,2,3,7,8-PeCDD at 2.36 pg/L, leading to a qualification limit of 1.18 pg/g
- 1,2,3,4,7,8-HxCDD at 1.58 pg/L, leading to a qualification limit of 0.790 pg/g
- 1,2,3,6,7,8-HxCDD at 1.58 pg/L, leading to a qualification limit of 0.790 pg/g
- 1,2,3,7,8,9-HxCDD at 1.84 pg/L, leading to a qualification limit of 0.920 pg/g
- 1,2,3,4,6,7,8-HpCDD at 1.39 pg/L, leading to a qualification limit of 0.695 pg/g
- 1,2,3,4,6,7,8,9-OCDD at 2.49 pg/L; this result is comparable to the associated aqueous method blank result and not indicative of potential cross-contamination
- 1,2,3,7,8-PeCDF at 2.78 pg/L, leading to a qualification limit of 1.39 pg/g
- 2,3,4,7,8-PeCDF at 2.34 pg/L, leading to a qualification limit of 1.17 pg/g
- 1,2,3,4,7,8-HxCDF at 2.32 pg/L, leading to a qualification limit of 1.16 pg/g
- 1,2,3,6,7,8-HxCDF at 1.97 pg/L, leading to a qualification limit of 0.985 pg/g
- 2,3,4,6,7,8-HxCDF at 1.15 pg/L, leading to a qualification limit of 0.575 pg/g
- 1,2,3,7,8,9-HxCDF at 1.37 pg/L, leading to a qualification limit of 0.685 pg/g
- 1,2,3,4,6,7,8-HpCDF at 1.21 pg/L; this result is comparable to the associated aqueous method blank result and not indicative of potential cross-contamination
- 1,2,3,4,7,8,9-HpCDF at 1.37 pg/L, leading to a qualification limit of 0.685 pg/g

Detections in associated samples less than or equal to the qualification limits should be qualified U-EBL. No detected results were below the associated qualification limits and no qualification is required.

Rinse blank EB10-09/05/2022 (results reported in SDG 20342) is associated with all samples in this SDG with a sample date of 9/4/22. The rinse blank was contaminated with 1,2,3,4,6,7,8,9-OCDD at 2.18 pg/L; however, the OCDD result was not substantially different from that reported in the method blank associated with this EB. The detected result reported for EB10-09/05/2022 represents contamination associated with aqueous sample preparation and is not related to cross-contamination in the field. No additional qualification is required.

Qualification: None required.

Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) – LCS/LCSD %Rs and RPDs were within QAPP control limits.

Qualification: None required.

Surrogates – All surrogates (labeled standards) were within control limits.

Qualification: None required.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) – No MS/MSD analysis was performed with this SDG.

Qualification: None required.

Field Duplicate – No field duplicates were submitted with this SDG.

Qualification: None required.

Compound Quantitation – Analyte non-detections were reported as the EDL and qualified U. Analytes detected between the EDL and PQL were reported as J-qualified results by the laboratory. These J qualifiers were retained unless superseded by a more severe qualifier.

If a detected analyte has an ion ratio outside the characteristic ion ratio window, the result is reported as an estimated maximum potential concentration. All results reported as an EMPC (a “K” flag is present in the laboratory qualifier) are qualified J-EMPC unless superseded by a higher priority qualifier.

2,3,7,8-TCDF is not fully resolved on the DB-5MS column; when detected above the PQL on the DB-5MS column, the result was confirmed on a DB-225 column using the instrument ID listed in the case narrative. In cases where two results are reported for 2,3,7,8-TCDF for a sample, the result from the DB-225 column is selected for use and the result from the DB-5MS is qualified DNR-EXC.

In cases where a target analyte is detected at a concentration above the calibrated range, the laboratory’s practice is to report the result with a laboratory qualifier of E without running a dilution so long as the detector is not saturated. The OCDD result for 1 affected sample is qualified J-ACR.

***Qualification:* The following results are qualified:**

- All results reported with a laboratory qualifier of K are qualified J with reason code EMPC.
- All 2,3,7,8-TCDF results reported from the DB-5MS column that are paired with a 2,3,7,8-TCDF result from the DB-225 column are qualified DNR, reason code EXC; note that the reportable_result field for these results are populated with “Yes” by the laboratory and are changed to “No” for the affected results.
- One OCDD result reported with a laboratory qualifier of E is qualified J with reason code ACR; note that the reportable_result field for this result is populated with “No” by the laboratory and is changed to “Yes” for the affected result.

Qualification Summary Table (results in pg/g):

The following Stage 2A review was performed on the requested analyses. No results were rejected, and analytical completeness is 100%.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No completeness issues were noted.

Qualification: None required.

Sample Delivery and Condition – All samples arrived intact at the laboratory in acceptable condition and temperature and were properly preserved. No other discrepancies were noted.

Qualification: None required.

Holding Times – All samples were prepared and analyzed within their required holding times.

Qualification: None required.

Method Blanks – The method 1613B method bank was contaminated with target analytes including the following:

- 1,2,3,4,6,7,8-HpCDD at 0.232 pg/g, leading to a qualification limit of 1.16 pg/g
- 1,2,3,4,6,7,8,9-OCDD at 0.612 pg/g, leading to a qualification limit of 3.06 pg/g
- 2,3,7,8-TCDF at 0.136 pg/g, leading to a qualification limit of 0.68 pg/g
- 1,2,3,7,8-PeCDF at 0.126 pg/g, leading to a qualification limit of 0.63 pg/g
- 1,2,3,4,7,8-HxCDF at 0.132 pg/g, leading to a qualification limit of 0.66 pg/g
- 1,2,3,6,7,8-HxCDF at 0.102 pg/g, leading to a qualification limit of 0.51 pg/g
- 2,3,4,6,7,8-HxCDF at 0.078 pg/g, leading to a qualification limit of 0.39 pg/g
- 1,2,3,7,8,9-HxCDF at 0.078 pg/g, leading to a qualification limit of 0.39 pg/g
- 1,2,3,4,6,7,8-HpCDF at 0.3 pg/g, leading to a qualification limit of 1.5 pg/g
- 1,2,3,4,6,7,8,9-OCDF at 0.174 pg/g, leading to a qualification limit of 0.87 pg/g

Detections in associated samples less than or equal to the qualification limits should be qualified U-MBL.

Qualification: The following results were qualified U-MBL; the detect_flag for the affected results is changed from Y to N.

- The 2,3,7,8-TCDF results in samples SIB-SC-C22-8-9-08/10/2022, SIB-SC-D10-8-8.5-08/03/2022, SIB-SC-D15-10-11-08/02/2022, SIB-SC-D15-11-12-08/02/2022, SIB-SC-D15-12-12.9-08/02/2022, SIB-SC-D37-6-7-08/25/2022, SIB-SC-D37-7-8-08/25/2022, SIB-SC-D37-8-8.3-08/25/2022, SIB-SC-E07-6-7-08/06/2022, SIB-SC-E07-7-7.5-08/06/2022, SIB-SC-E10-9-10-08/05/2022, SIB-SC-E10-10-11-08/05/2022, and SIB-SC-E10-11-12-08/05/2022
- The 1,2,3,7,8-PeCDF results in samples SIB-SC-C22-8-9-08/10/2022, SIB-SC-D10-8-8.5-08/03/2022, SIB-SC-D15-10-11-08/02/2022, SIB-SC-D15-11-12-08/02/2022, SIB-SC-D15-12-12.9-08/02/2022, SIB-SC-D37-6-7-08/25/2022, SIB-SC-D37-7-8-08/25/2022, SIB-SC-D37-8-8.3-08/25/2022, SIB-SC-E07-6-7-08/06/2022, SIB-SC-E07-7-7.5-08/06/2022, SIB-SC-E10-9-10-08/05/2022, SIB-SC-E10-10-11-08/05/2022, and SIB-SC-E10-11-12-08/05/2022
- The 1,2,3,4,7,8-HxCDF results in samples SIB-SC-C22-8-9-08/10/2022, SIB-SC-D15-11-12-08/02/2022, SIB-SC-D15-12-12.9-08/02/2022, SIB-SC-D37-6-7-08/25/2022, SIB-SC-D37-7-8-08/25/2022, SIB-SC-D37-8-8.3-08/25/2022, SIB-SC-E07-6-7-08/06/2022, SIB-SC-E07-7-7.5-08/06/2022, SIB-SC-E10-10-11-08/05/2022, and SIB-SC-E10-11-12-08/05/2022
- The 1,2,3,6,7,8-HxCDF results in samples SIB-SC-C22-8-9-08/10/2022, SIB-SC-D15-11-12-08/02/2022, SIB-SC-D15-12-12.9-08/02/2022, SIB-SC-D37-6-7-08/25/2022, SIB-SC-D37-7-8-08/25/2022, SIB-SC-D37-8-8.3-08/25/2022, SIB-SC-E07-6-7-08/06/2022, SIB-SC-E07-7-7.5-08/06/2022, and SIB-SC-E10-11-12-08/05/2022
- The 2,3,4,6,7,8-HxCDF results in samples SIB-SC-C22-8-9-08/10/2022, SIB-SC-D15-11-12-08/02/2022, SIB-SC-D37-6-7-08/25/2022, SIB-SC-D37-7-8-08/25/2022, SIB-SC-D37-8-8.3-08/25/2022, SIB-SC-E07-6-7-08/06/2022, and SIB-SC-E10-11-12-08/05/2022
- The 1,2,3,7,8,9-HxCDF results in samples SIB-SC-C22-7-8-08/10/2022, SIB-SC-E10-9-10-08/05/2022, and SIB-SC-E10-10-11-08/05/2022
- The 1,2,3,4,6,7,8-HpCDF results in samples SIB-SC-D10-8-8.5-08/03/2022, SIB-SC-D15-12-12.9-08/02/2022, SIB-SC-D37-6-7-08/25/2022, SIB-SC-D37-8-8.3-08/25/2022, SIB-SC-E07-6-7-08/06/2022, and SIB-SC-E07-7-7.5-08/06/2022
- The 1,2,3,4,6,7,8,9-OCDF results in samples SIB-SC-D10-8-8.5-08/03/2022, SIB-SC-D15-12-12.9-08/02/2022, and SIB-SC-E07-7-7.5-08/06/2022

Rinsate Blanks – Rinse blank EB06-08/04/2022 (results reported in SDG 20187) is associated with all samples with results reported in this SDG that were sampled on 08/02/2022, 08/03/2022, 08/05/2022, and 08/06/2022. The rinse blank was contaminated with multiple PCDD/PCDF compounds; however, all detected results in this EB were not substantially different from those reported in the method blank associated with this EB. The detected results reported for EB06-08/04/2022 represent contamination associated with aqueous sample preparation and are not related to cross-contamination in the field. No

additional qualification is required.

Rinse blank EB07-08/09/2022 (results reported in SDG 20187) is associated with all samples with results reported in this SDG that were sampled on 08/10/2022. The rinse blank was contaminated with the following analytes:

- 1,2,3,4,6,7,8-HpCDD at 1.53 pg/L, leading to a qualification limit of 0.765 pg/g
- 1,2,3,4,6,7,8,9-OCDD at 2.79 pg/L, leading to a qualification limit of 1.395 pg/g
- 1,2,3,4,7,8-HxCDF at 0.902 pg/L, leading to a qualification limit of 0.451 pg/g
- 1,2,3,4,6,7,8-HpCDF at 1.85 pg/L, leading to a qualification limit of 0.925 pg/g

Rinse blank EB09-08/24/2022 (results reported in SDG 20283) is associated with all samples with results reported in this SDG that were sampled on 08/23/2022, 08/24/2022, and 08/25/2022. The rinsate blank was contaminated with almost all target analytes, including:

- 1,2,3,7,8-PeCDD at 2.36 pg/L, leading to a qualification limit of 1.18 pg/g
- 1,2,3,4,7,8-HxCDD at 1.58 pg/L, leading to a qualification limit of 0.790 pg/g
- 1,2,3,6,7,8-HxCDD at 1.58 pg/L, leading to a qualification limit of 0.790 pg/g
- 1,2,3,7,8,9-HxCDD at 1.84 pg/L, leading to a qualification limit of 0.920 pg/g
- 1,2,3,4,6,7,8-HpCDD at 1.39 pg/L, leading to a qualification limit of 0.695 pg/g
- 1,2,3,4,6,7,8,9-OCDD at 2.49 pg/L; this result is comparable to the associated aqueous method blank result and not indicative of potential cross-contamination
- 1,2,3,7,8-PeCDF at 2.78 pg/L, leading to a qualification limit of 1.39 pg/g
- 2,3,4,7,8-PeCDF at 2.34 pg/L, leading to a qualification limit of 1.17 pg/g
- 1,2,3,4,7,8-HxCDF at 2.32 pg/L, leading to a qualification limit of 1.16 pg/g
- 1,2,3,6,7,8-HxCDF at 1.97 pg/L, leading to a qualification limit of 0.985 pg/g
- 2,3,4,6,7,8-HxCDF at 1.15 pg/L, leading to a qualification limit of 0.575 pg/g
- 1,2,3,7,8,9-HxCDF at 1.37 pg/L, leading to a qualification limit of 0.685 pg/g
- 1,2,3,4,6,7,8-HpCDF at 1.21 pg/L; this result is comparable to the associated aqueous method blank result and not indicative of potential cross-contamination
- 1,2,3,4,7,8,9-HpCDF at 1.37 pg/L, leading to a qualification limit of 0.685 pg/g

Detections in associated samples less than or equal to the qualification limits should be qualified U-EBL.

Qualification: The following results were qualified U-EBL; the detect_flag for the affected results is changed from Y to N.

- The 1,2,3,6,7,8-HxCDD results in samples SIB-SC-D37-6-7-08/25/2022, SIB-SC-D37-7-8-08/25/2022, and SIB-SC-D37-8-8.3-08/25/2022
- The 1,2,3,7,8,9-HxCDD results in samples SIB-SC-D37-6-7-08/25/2022, SIB-SC-D37-7-8-08/25/2022, and SIB-SC-D37-8-8.3-08/25/2022
- The 1,2,3,7,8-PeCDF results in samples SIB-SC-C20-8-8.5-08/24/2022, SIB-SC-D37-6-7-08/25/2022, SIB-SC-D37-7-8-08/25/2022, and SIB-SC-D37-8-8.3-08/25/2022
- The 2,3,4,7,8-PeCDF results in samples SIB-SC-D37-6-7-08/25/2022, SIB-SC-D37-7-8-08/25/2022, and SIB-SC-D37-8-8.3-08/25/2022
- The 1,2,3,4,7,8-HxCDF results in samples SIB-SC-D37-6-7-08/25/2022, SIB-SC-D37-7-8-08/25/2022, and SIB-SC-D37-8-8.3-08/25/2022
- The 1,2,3,6,7,8-HxCDF results in samples SIB-SC-D37-6-7-08/25/2022, SIB-SC-D37-7-8-08/25/2022, and SIB-SC-D37-8-8.3-08/25/2022
- The 2,3,4,6,7,8-HxCDF results in samples SIB-SC-D37-6-7-08/25/2022, SIB-SC-D37-7-8-08/25/2022, and SIB-SC-D37-8-8.3-08/25/2022
- The 1,2,3,4,7,8,9-HpCDF results in samples SIB-SC-D37-6-7-08/25/2022 and SIB-SC-D37-7-8-08/25/2022

Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) – LCS/LCSD %Rs and RPDs were within QAPP control limits.

Qualification: None required.

Surrogates – All surrogates (labeled standards) were within control limits.

Qualification: None required.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) – An MS/MSD was performed using sample SIB-SC-C26-11-12-08/23/2022. The MS and/or MSD had a %R outside of control limits for 1,2,3,4,6,7,8-HpCDD, 1,2,3,4,6,7,8,9-OCDD, and 1,2,3,4,6,7,8,9-OCDF, however, the sample concentration of 1,2,3,4,6,7,8,9-OCDD was >4x the spike concentration and the %R results are not applicable. The results of 1,2,3,4,6,7,8-HpCDD and 1,2,3,4,6,7,8,9-OCDF in the parent sample should be qualified J. All RPDs were within control limits with the exception of 1,2,3,4,6,7,8-HpCDD, 1,2,3,4,6,7,8,9-OCDD, 1,2,3,4,6,7,8-HpCDF, and 1,2,3,4,6,7,8,9-OCDF. These results should be qualified J in the parent sample.

***Qualification:* In sample SIB-SC-C26-11-12-08/23/2022, the 1,2,3,4,6,7,8-HpCDD and 1,2,3,4,6,7,8,9-OCDF results are qualified J, reason code MSL,MSH,MSP and the 1,2,3,4,6,7,8,9-OCDD and 1,2,3,4,6,7,8-HpCDF results are qualified J, reason code MSP.**

Field Duplicate – No field duplicate was submitted with this SDG.

Qualification: None required.

Compound Quantitation – Analyte non-detections were reported as the EDL and qualified U. Analytes detected between the EDL and PQL were reported as J-qualified results by the laboratory. These J qualifiers were retained unless superseded by a more severe qualifier.

If a detected analyte has an ion ratio outside the characteristic ion ratio window, the result is reported as an estimated maximum potential concentration. All results reported as an EMPC (a “K” flag is present in the laboratory qualifier) are qualified J-EMPC unless superseded by a higher priority qualifier.

2,3,7,8-TCDF is not fully resolved on the DB-5MS column; when detected above the PQL on the DB-5MS column, the result was confirmed on a DB-225 column using the instrument ID listed in the case narrative. In cases where two results are reported for 2,3,7,8-TCDF for a sample, the result from the DB-225 column is selected for use and the result from the DB-5MS is qualified DNR-EXC.

In cases where a target analyte is detected at a concentration above the calibrated range, the laboratory’s practice is to report the result with a laboratory qualifier of E without running a dilution so long as the detector is not saturated. The OCDD results for 3 affected samples are qualified J-ACR.

***Qualification:* The following results are qualified:**

- All results reported with a laboratory qualifier of K are qualified J with reason code EMPC.
- All 2,3,7,8-TCDF results reported from the DB-5MS column that are paired with a 2,3,7,8-TCDF result from the DB-225 column are qualified DNR, reason code EXC; note that the reportable_result field for these results are populated with “Yes” by the laboratory and are changed to “No” for the affected results.
- Three OCDD results reported with a laboratory qualifier of E are qualified J with reason code ACR; note that the reportable_result field for these results are populated with “No” by the laboratory and are changed to “Yes” for the affected results.

Qualification Summary Table (results in pg/g):

Sample	Analyte	Lab Value	Lab Qualifier	Validated Value	Validated Qualifier	Reason Code

The following Stage 2A review was performed on the requested analyses. No results were rejected, and analytical completeness is 100%.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No completeness issues were noted.

Qualification: None required.

Sample Delivery and Condition – All samples arrived intact at the laboratory in acceptable condition and temperature and were properly preserved. No other discrepancies were noted.

Qualification: None required.

Holding Times – All samples were prepared and analyzed within their required holding times.

Qualification: None required.

Method Blanks – The method 1613B method bank was contaminated with several target analytes including the following:

- 1,2,3,4,6,7,8-HpCDD at 0.226 pg/g, leading to a qualification limit of 1.13 pg/g
- 1,2,3,4,6,7,8,9-OCDD at 1.17 pg/g, leading to a qualification limit of 5.85 pg/g

- 2,3,7,8-TCDF at 0.166 pg/g, leading to a qualification limit of 0.83 pg/g
- 1,2,3,7,8-PeCDF at 0.102 pg/g, leading to a qualification limit of 0.51 pg/g
- 1,2,3,4,7,8-HxCDF at 0.112 pg/g, leading to a qualification limit of 0.56 pg/g
- 1,2,3,4,6,7,8-HpCDF at 0.276 pg/g, leading to a qualification limit of 1.38 pg/g
- 1,2,3,4,6,7,8,9-OCDF at 0.266 pg/g, leading to a qualification limit of 1.33 pg/g

Detections in associated samples less than or equal to the qualification limits should be qualified U-MBL.

Qualification: The following results were qualified U-MBL; the detect_flag for the affected results is changed from Y to N.

- The 1,2,3,4,6,7,8-HpCDD result in sample SIB-SC-E13-11-12-08/03/2022
- The 2,3,7,8-TCDF results in samples SIB-SC-E11-8-9-08/04/2022, SIB-SC-E11-9-10-08/04/2022, SIB-SC-E11-13-14-08/04/2022, SIB-SC-E11-14-14.7-08/04/2022, SIB-SC-E13-9-10-08/03/2022, SIB-SC-E13-10-11-08/03/2022, SIB-SC-E13-11-12-08/03/2022, SIB-SC-E14-10-11-08/03/2022, SIB-SC-E14-11-12-08/03/2022, SIB-SC-E14-12-12.4-08/03/2022, SIB-SC-E15-9-10-08/02/2022, SIB-SC-E15-10-11-08/02/2022, and SIB-SC-E15-11-11.8-08/02/2022
- The 1,2,3,7,8-PeCDF results in samples SIB-SC-E11-14-14.7-08/04/2022, SIB-SC-E13-10-11-08/03/2022, and SIB-SC-E15-10-11-08/02/2022
- The 1,2,3,4,7,8-HxCDF results in samples SIB-SC-E13-9-10-08/03/2022, SIB-SC-E13-10-11-08/03/2022, SIB-SC-E14-10-11-08/03/2022, SIB-SC-E14-11-12-08/03/2022, SIB-SC-E14-12-12.4-08/03/2022, SIB-SC-E15-9-10-08/02/2022, SIB-SC-E15-10-11-08/02/2022, and SIB-SC-E15-11-11.8-08/02/2022
- The 1,2,3,4,6,7,8-HxCDF results in samples SIB-SC-E11-13-14-08/04/2022, SIB-SC-E11-14-14.7-08/04/2022, SIB-SC-E13-9-10-08/03/2022, SIB-SC-E13-10-11-08/03/2022, SIB-SC-E13-11-12-08/03/2022, SIB-SC-E14-10-11-08/03/2022, SIB-SC-E14-11-12-08/03/2022, SIB-SC-E14-12-12.4-08/03/2022, and SIB-SC-E15-11-11.8-08/02/2022
- The 2,3,4,6,7,8-HxCDF results in samples SIB-SC-E11-9-10-08/04/2022, SIB-SC-E11-13-14-08/04/2022, SIB-SC-E11-14-14.7-08/04/2022, SIB-SC-E13-9-10-08/03/2022, SIB-SC-E13-10-11-08/03/2022, SIB-SC-E13-10-11-08/03/2022, SIB-SC-E13-11-12-08/03/2022, SIB-SC-E14-10-11-08/03/2022, SIB-SC-E14-10-11-08/03/2022, SIB-SC-E14-11-12-08/03/2022, and SIB-SC-E15-11-11.8-08/02/2022

Rinsate Blanks – Rinse blank EB05-07/26/2022 (results reported in SDG 20123) is associated with all samples with results reported in this SDG with a sample date of 7/25/22. The rinse blank was free from contamination.

Rinse blank EB06-08/04/2022 (results reported in SDG 202187) is associated with all samples in this SDG with sample dates of 8/2/22, 8/3/22, and 8/4/22. The rinse blank was contaminated with multiple PCDD/PCDF compounds; however, all detected results in this EB were not substantially different from those reported in the method blank associated with this EB. The detected results reported for EB06-08/04/2022 represent contamination associated with aqueous sample preparation and are not related to cross-contamination in the field. No additional qualification is required.

Rinse blank EB09-08/24/2022 (results reported in SDG 20283) is associated with all samples in this SDG with a sample date of 8/25/22. The rinsate blank was contaminated with almost all target analytes, including:

- 1,2,3,7,8-PeCDD at 2.36 pg/L, leading to a qualification limit of 1.18 pg/g
- 1,2,3,4,7,8-HxCDD at 1.58 pg/L, leading to a qualification limit of 0.790 pg/g
- 1,2,3,6,7,8-HxCDD at 1.58 pg/L, leading to a qualification limit of 0.790 pg/g
- 1,2,3,7,8,9-HxCDD at 1.84 pg/L, leading to a qualification limit of 0.920 pg/g
- 1,2,3,4,6,7,8-HpCDD at 1.39 pg/L, leading to a qualification limit of 0.695 pg/g

- 1,2,3,4,6,7,8,9-OCDD at 2.49 pg/L; this result is comparable to the associated aqueous method blank result and not indicative of potential cross-contamination
- 1,2,3,7,8-PeCDF at 2.78 pg/L, leading to a qualification limit of 1.39 pg/g
- 2,3,4,7,8-PeCDF at 2.34 pg/L, leading to a qualification limit of 1.17 pg/g
- 1,2,3,4,7,8-HxCDF at 2.32 pg/L, leading to a qualification limit of 1.16 pg/g
- 1,2,3,6,7,8-HxCDF at 1.97 pg/L, leading to a qualification limit of 0.985 pg/g
- 2,3,4,6,7,8-HxCDF at 1.15 pg/L, leading to a qualification limit of 0.575 pg/g
- 1,2,3,7,8,9-HxCDF at 1.37 pg/L, leading to a qualification limit of 0.685 pg/g
- 1,2,3,4,6,7,8-HpCDF at 1.21 pg/L; this result is comparable to the associated aqueous method blank result and not indicative of potential cross-contamination
- 1,2,3,4,7,8,9-HpCDF at 1.37 pg/L, leading to a qualification limit of 0.685 pg/g

Detections in associated samples less than or equal to the qualification limits should be qualified U-EBL. All detected results for the analytes detected in the equipment blanks are greater than the qualification limits and no qualification is required.

Qualification: None required.

Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) – LCS/LCSD %Rs and RPDs were within QAPP control limits.

Qualification: None required.

Surrogates – All surrogates (labeled standards) were within control limits.

Qualification: None required.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) – MS/MSD analysis was performed on sample SIB-SC-E11-8-9-08/04/2022. 1,2,3,4,6,7,8-HpCDD and 1,2,3,4,6,7,8-HpCDF recovered low in the MS and MSD, and 1,2,3,4,6,7,8,9-OCDD and 1,2,3,4,6,7,8,9-OCDF recovered extremely low in the MS and MSD. All other %Rs and RPDs were within control limits. The 1,2,3,4,6,7,8-HpCDD and 1,2,3,4,6,7,8-HpCDF results in sample SIB-SC-E11-8-9-08/04/2022 should be qualified J-MSL and the 1,2,3,4,6,7,8,9-OCDD and 1,2,3,4,6,7,8,9-OCDF results should be qualified J-MSLX.

***Qualification:* In sample SIB-SC-E11-8-9-08/04/2022, the 1,2,3,4,6,7,8-HpCDD and 1,2,3,4,6,7,8-HpCDF results are qualified J-MSL and the 1,2,3,4,6,7,8,9-OCDD and 1,2,3,4,6,7,8,9-OCDF results are qualified J-MSLX.**

Field Duplicate – No field duplicates were submitted with this SDG.

Qualification: None required.

Compound Quantitation – Analyte non-detections were reported as the EDL and qualified U. Analytes detected between the EDL and PQL were reported as J-qualified results by the laboratory. These J qualifiers were retained unless superseded by a more severe qualifier.

If a detected analyte has an ion ratio outside the characteristic ion ratio window, the result is reported as an estimated maximum potential concentration. All results reported as an EMPC (a “K” flag is present in the laboratory qualifier) are qualified J-EMPC unless superseded by a higher priority qualifier.

2,3,7,8-TCDF is not fully resolved on the DB-5MS column; when detected above the PQL on the DB-5MS column, the result was confirmed on a DB-225 column using the instrument ID listed in the case narrative. In cases where two results are reported for 2,3,7,8-TCDF for a sample, the result from the DB-225 column is selected for use and the result from the DB-5MS is qualified DNR-EXC.

In cases where a target analyte is detected at a concentration above the calibrated range, the laboratory's practice is to report the result with a laboratory qualifier of E without running a dilution so long as the detector is not saturated. The OCDD results for 4 affected samples are qualified J-ACR.

Qualification: The following results are qualified:

- All results reported with a laboratory qualifier of K are qualified J with reason code EMPC.
- All 2,3,7,8-TCDF results reported from the DB-5MS column that are paired with a 2,3,7,8-TCDF result from the DB-225 column are qualified DNR, reason code EXC; note that the reportable_result field for these results are populated with "Yes" by the laboratory and are changed to "No" for the affected results.
- Four OCDD results reported with laboratory qualifiers of E are qualified J with reason code ACR; note that the reportable_result field for these results is populated with "No" by the laboratory and is changed to "Yes" for the affected results.

Qualification Summary Table (results in pg/g):

Sample	Analyte	Lab Value	Lab Qualifier	Validated Value	Validated Qualifier	Reason Code
SIB-SC-E11-8-9-08/04/2022	1,2,3,4,6,7,8-HEPTACHLORODIBENZOFURAN	40.9	--	40.9	J	MSL

The following Stage 2A review was performed on the requested analyses. No results were rejected, and analytical completeness is 100%.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No completeness issues were noted.

Qualification: None required.

Sample Delivery and Condition – All samples arrived intact at the laboratory in acceptable condition and temperature and were properly preserved. No other discrepancies were noted.

Qualification: None required.

Holding Times – All samples were prepared and analyzed within their required holding times.

Qualification: None required.

Method Blanks – The method 1613B method bank was contaminated with target analytes including the following:

- 1,2,3,4,6,7,8,9-OCDD at 0.648 pg/g, leading to a qualification limit of 3.24 pg/g
- 1,2,3,4,6,7,8-HpCDF at 0.224 pg/g, leading to a qualification limit of 1.12 pg/g

Detections in associated samples less than or equal to the qualification limits should be qualified U-MBL.

***Qualification:* The following results were qualified U-MBL; the detect_flag for the affected results is changed from Y to N.**

- **The 1,2,3,4,6,7,8-HpCDF results in samples SIB-SC-F11-11-12-08/06/2022, SIB-SC-F11-12-13-08/06/2022, SIB-SC-F17-7-8-08/06/2022, SIB-SC-G01-6-6.6-09/02/2022, and SIB-SC-L06-6-7-08/21/2022**

Rinsate Blanks – Rinse blank EB06-08/04/2022 (results reported in SDG 20187) is associated with all samples with results reported in this SDG that were sampled on 08/06/2022. The rinse blank was contaminated with multiple PCDD/PCDF compounds; however, all detected results in this EB were not substantially different from those reported in the method blank associated with this EB. The detected results reported for EB06-08/04/2022 represent contamination associated with aqueous sample preparation and are not related to cross-contamination in the field. No additional qualification is required.

Rinse blank EB08-08/21/2022 (results reported in SDG 20283) is associated with all samples in this SDG with sample date 08/21/2022. The rinse blank was contaminated with 1,2,3,4,6,7,8,9-OCDD at 4.36 pg/L; however, the OCDD result was not substantially different from that reported in the method blank associated with this EB. The detected result reported for EB08-08/21/2022 represents contamination associated with aqueous sample preparation and is not related to cross-contamination in the field. No additional qualification is required.

Rinse blank EB10-09/05/2022 (results reported in SDG 20342) is associated with all samples in this SDG with a sample date of 09/02/2022. The rinse blank was contaminated with 1,2,3,4,6,7,8,9-OCDD at 2.18 pg/L; however, the OCDD result was not substantially different from that reported in the method blank associated with this EB. The detected result reported for EB10-09/05/2022 represents contamination associated with aqueous sample preparation and is not related to cross-contamination in the field. No additional qualification is required.

Qualification: None required.

Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) – LCS/LCSD %Rs and RPDs were within QAPP control limits.

Qualification: None required.

Surrogates – All surrogates (labeled standards) were within control limits.

Qualification: None required.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) – An MS/MSD was performed using sample SIB-SC-F11-6-7-08/06/2022. For 1,2,3,4,6,7,8,9-OCDD the MS yielded a recovery below control limits and the MSD yielded a recovery above control limits. The 1,2,3,4,6,7,8,9-OCDD result should be qualified J in the parent sample. All RPD results were within control limits with the exception of 1,2,3,4,6,7,8,9-OCDD and 1,2,3,4,6,7,8,9-OCDF. These results should be qualified J in the parent sample.

***Qualification:* In sample SIB-SC-F11-6-7-08/06/2022, the 1,2,3,4,6,7,8,9-OCDD result is qualified J, reason code MSL,MSH,MSP, and the 1,2,3,4,6,7,8,9-OCDF result is qualified J, reason code MSP.**

Field Duplicate – No field duplicate was submitted with this SDG.

Qualification: None required.

Compound Quantitation – Analyte non-detections were reported as the EDL and qualified U. Analytes detected between the EDL and PQL were reported as J-qualified results by the laboratory. These J qualifiers were retained unless superseded by a more severe qualifier.

If a detected analyte has an ion ratio outside the characteristic ion ratio window, the result is reported as an estimated maximum potential concentration. All results reported as an EMPC (a "K" flag is present in the laboratory qualifier) are qualified J-EMPC unless superseded by a higher priority qualifier.

2,3,7,8-TCDF is not fully resolved on the DB-5MS column; when detected above the PQL on the DB-5MS column, the result was confirmed on a DB-225 column using the instrument ID listed in the case narrative. In cases where two results are reported for 2,3,7,8-TCDF for a sample, the result from the DB-225 column is selected for use and the result from the DB-5MS is qualified DNR-EXC.

Qualification: The following results are qualified:

- All results reported with a laboratory qualifier of K are qualified J with reason code EMPC.
- All 2,3,7,8-TCDF results reported from the DB-5MS column that are paired with a 2,3,7,8-TCDF result from the DB-225 column are qualified DNR, reason code EXC; note that the reportable_result field for these results are populated with "Yes" by the laboratory and are changed to "No" for the affected results.

Qualification Summary Table (results in pg/g):

Sample	Analyte	Lab Value	Lab Qualifier	Validated Value	Validated Qualifier	Reason Code
SIB-SC-F11-6-7-08/06/2022	1,2,3,4,7,8-HEXACHLORODIBENZO-P-DIOXIN	0.459	JK	0.459	J	EMPC

The following Stage 2A review was performed on the requested analyses. No results were rejected, and analytical completeness is 100%.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No completeness issues were noted.

Qualification: None required.

Sample Delivery and Condition – All samples arrived intact at the laboratory in acceptable condition and temperature and were properly preserved.

Qualification: None required.

Holding Times – All samples were prepared and analyzed within their required holding times.

Qualification: None required.

Method Blanks – The method 1668C method blank associated with this SDG was contaminated with PCB-61/70/74/76 at a level of 6.08 pg/g, leading to a qualification limit of 30.4 pg/g. Associated detections below the qualification threshold should be qualified U.

***Qualification:* The PCB-61/70/74/76 results in samples SIB-SC-B04-8-9-09/04/2022, SIB-SC-B26-11-12-08/23/2022, SIB-SC-C11-12-13-08/20/2022, SIB-SC-E11-9-10-08/04/2022, SIB-SC-E13-11-12-08/03/2022, SIB-SC-F11-11-12-08/06/2022 are qualified U, reason code MBL.**

Equipment Blanks –Equipment blank EB05-07262022 (results reported in SDG 20124) is associated with all sediment samples collected on 7.25.22; equipment blank EB06-08042022 (results reported in SDG 20186) is associated with all sediment samples collected 8.3.22, through 8.6.22; equipment blank EB08-08212022 (results reported in SDG 20282) is associated with all sediment samples collected on 8.20.22 and 8.21.22; Equipment blank EB09-08242022 (results reported in SDG 20282) is associated with all sediment samples collected from 8.23.22 and 8.24.22; Equipment blank EB10-09052022 (results reported in SDG 20341) is associated with all sediment samples collected on 9.4.22. Due to the differences in mass extracted, the concentrations reported as pg/L in EBs correspond to the same concentration in pg/g in sediment samples. The following PCB congeners were detected in the EBs (does not include PCB congeners considered to be analytical artifacts based on corresponding detections in the associated aqueous MBs). Note that EB contamination is not adjusted for dilution when comparing to sample results.

EB05-07262022

PCB Congener	Concentration (pg/L)	Soil-equivalent Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-3	3.66	3.66	18.3
PCB-4	12.1	12.1	60.5
PCB-8	12.4	12.4	62.0
PCB-16	5.45	5.45	27.25

The following results were qualified U-EBL due to contamination in EB10-09052022

- SIB-SC-B04-8-9-09/04/2022: PCB-147/149, PCB-180/193

Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) – All LCS/LCSD %Rs and RPDs were within QAPP control limits.

Qualification: None required.

Surrogates – All surrogates (EISs) were within QAPP control limits with the exception of 13C-77-TeCB and 13C-81-TeCB recovering above control limits in sample SIB-SC-F17-6-7-08/06/2022. Associated detections in this sample should be qualified J while non-detects require no qualification.

Qualification: In sample SIB-SC-F17-6-7-08/06/2022, PCB-40/71, PCB-42, PCB-44/47/65, PCB-45/51, PCB-46, PCB-49/69, PCB-50/53, PCB-52, PCB-56, PCB-61/70/74/76, PCB-66, and PCB-64 are qualified J, reason code LSH.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) –MS/MSD analyses were performed on sample SIB-SC-B04-8-9-09/04/2022. All %Rs and RPDs were within QAPP control limits.

Qualification: None required.

Field Duplicate – No field duplicates were submitted with this SDG.

Qualification: None required.

Laboratory Duplicate – A laboratory duplicate was not performed in this SDG.

Qualification: None required.

Compound Quantitation – Analyte non-detections were reported as ND with the associated DL, LOD, and LOQ included on the result summary pages. This reporting format is equivalent to reporting non-detected data in the DoD “LOD U” format. Analytes detected between the DL and LOQ were reported as J-qualified results by the laboratory. These J qualifiers were retained unless superseded by a more severe qualifier.

If a detected analyte has an ion ration outside the characteristic ion ratio window, the result is reported as an estimated maximum potential concentration. All results reported as an EMPC are qualified J-EMPC unless superseded by a higher priority qualifier.

Qualification: None required.

Qualification Summary Table (results in pg/g):

Sample	Analyte	Lab Value	Lab Qualifier	Validated Value	Validated Qualifier	Reason Code

The following Stage 2A review was performed on the requested analyses. No results were rejected, and analytical completeness is 100%.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No completeness issues were noted.

Qualification: None required.

Sample Delivery and Condition – All samples arrived intact at the laboratory in acceptable condition and temperature and were properly preserved. No other discrepancies were noted.

Qualification: None required.

Holding Times – All samples were prepared and analyzed within their required holding times.

Qualification: None required.

Method Blanks – The method 1613B method bank was contaminated with target analytes including the following:

- 1,2,3,4,6,7,8-HpCDD at 0.12 pg/g, leading to a qualification limit of 0.6 pg/g
- 1,2,3,4,6,7,8,9-OCDD at 0.428 pg/g, leading to a qualification limit of 2.14 pg/g
- 2,3,7,8-TCDF at 0.092 pg/g, leading to a qualification limit of 0.46 pg/g
- 1,2,3,7,8-PeCDF at 0.068 pg/g, leading to a qualification limit of 0.34 pg/g
- 2,3,4,7,8-PeCDF at 0.05 pg/g, leading to a qualification limit of 0.25 pg/g
- 1,2,3,4,7,8-HxCDF at 0.09 pg/g, leading to a qualification limit of 0.45 pg/g

- 1,2,3,6,7,8-HxCDF at 0.072 pg/g, leading to a qualification limit of 0.36 pg/g
- 2,3,4,6,7,8-HxCDF at 0.064 pg/g, leading to a qualification limit of 0.32 pg/g
- 1,2,3,4,6,7,8-HpCDF at 0.216 pg/g, leading to a qualification limit of 1.08 pg/g
- 1,2,3,4,6,7,8,9-OCDF at 0.18 pg/g, leading to a qualification limit of 0.9 pg/g

Detections in associated samples less than or equal to the qualification limits should be qualified U-MBL. All detected results are greater than the associated qualification limit and no qualification is required.

Qualification: None required.

Rinsate Blanks – Rinse blank EB01-07/12/2022 (results reported in SDG 20046) is associated with all samples with results reported in this SDG. The rinse blank was free from contamination.

Qualification: None required.

Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) – LCS/LCSD %Rs and RPDs were within QAPP control limits.

Qualification: None required.

Surrogates – All surrogates (labeled standards) were within control limits.

Qualification: None required.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) – An MS/MSD was performed using sample SIB-SC-D25-2-3-07/11/2022. In the MS, recoveries were low for 1,2,3,4,6,7,8-HpCDF and 1,2,3,4,6,7,8,9-OCDF and extremely low for 1,2,3,4,6,7,8-HpCDD and 1,2,3,4,6,7,8,9-OCDD. In the MSD, the recoveries were high for 1,2,3,6,7,8-HxCDD, 1,2,3,4,6,7,8-HpCDD, 1,2,3,4,6,7,8,9-OCDD, 1,2,3,4,6,7,8-HpCDF, and 1,2,3,4,6,7,8,9-OCDF, however, the sample concentration of 1,2,3,4,6,7,8,9-OCDD was >4x the spike concentration and the %R results are not applicable. The other results should be qualified J in the parent sample. All RPDs were within control limits with the exception of 1,2,3,6,7,8-HxCDD, 1,2,3,4,6,7,8-HpCDD, 1,2,3,4,6,7,8,9-OCDD, 2,3,7,8-TCDF, 1,2,3,4,6,7,8-HpCDF, and 1,2,3,4,6,7,8,9-OCDF. These results should be qualified J in the parent sample.

***Qualification:* In sample SIB-SC-D25-2-3-07/11/2022, the 1,2,3,6,7,8-HxCDD result is qualified J, reason code MSH,MSP. The 1,2,3,4,6,7,8-HpCDD result is qualified J, reason code MSLX, MSH, MSP. The 1,2,3,4,6,7,8-HpCDF and 1,2,3,4,6,7,8,9-OCDF results are qualified J, reason code MSL,MSH,MSP. The 1,2,3,4,6,7,8,9-OCDD and 2,3,7,8-TCDF results are qualified J, reason code MSP.**

Field Duplicate – Sample FD-09-07/11/2022 was submitted as a field duplicate of sample SIB-SC-D25-1-2-07/11/2022. All precision criteria were met.

Qualification: None required.

Compound Quantitation – Analyte non-detections were reported as the EDL and qualified U. Analytes detected between the EDL and PQL were reported as J-qualified results by the laboratory. These J qualifiers were retained unless superseded by a more severe qualifier.

If a detected analyte has an ion ratio outside the characteristic ion ratio window, the result is reported as an estimated maximum potential concentration. All results reported as an EMPC (a “K” flag is present in the laboratory qualifier) are qualified J-EMPC unless superseded by a higher priority qualifier.

2,3,7,8-TCDF is not fully resolved on the DB-5MS column; when detected above the PQL on the DB-5MS column, the result was confirmed on a DB-225 column using the instrument ID listed in the case narrative.

In cases where two results are reported for 2,3,7,8-TCDF for a sample, the result from the DB-225 column is selected for use and the result from the DB-5MS is qualified DNR-EXC.

In cases where a target analyte is detected at a concentration above the calibrated range, the laboratory's practice is to report the result with a laboratory qualifier of E without running a dilution so long as the detector is not saturated. The OCDD results for 8 affected samples are qualified J-ACR.

Qualification: The following results are qualified:

- All results reported with a laboratory qualifier of K are qualified J with reason code EMPC.
- All 2,3,7,8-TCDF results reported from the DB-5MS column that are paired with a 2,3,7,8-TCDF result from the DB-225 column are qualified DNR, reason code EXC; note that the reportable_result field for these results are populated with "Yes" by the laboratory and are changed to "No" for the affected results.
- Eight OCDD results reported with a laboratory qualifier of E are qualified J with reason code ACR; note that the reportable_result field for these results are populated with "No" by the laboratory and are changed to "Yes" for the affected results.

Qualification Summary Table (results in pg/g):

Sample	Analyte	Lab Value	Lab Qualifier	Validated Value	Validated Qualifier	Reason Code

SIB-SC-C24-5-6-07/11/2022	21616006	Sediment

The following Stage 2A review was performed on the requested analyses. No results were rejected, and analytical completeness is 100%.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No completeness issues were noted.

Qualification: None required.

Sample Delivery and Condition – All samples arrived intact at the laboratory in acceptable condition and temperature and were properly preserved. No other discrepancies were noted.

Qualification: None required.

Holding Times – All samples were prepared and analyzed within their required holding times.

Qualification: None required.

Method Blanks – The method 1613B method bank was contaminated with target analytes including the following:

- 1,2,3,4,6,7,8-HpCDD at 0.12 pg/g, leading to a qualification limit of 0.6 pg/g
- 1,2,3,4,6,7,8,9-OCDD at 0.428 pg/g, leading to a qualification limit of 2.14 pg/g
- 2,3,7,8-TCDF at 0.092 pg/g, leading to a qualification limit of 0.46 pg/g
- 1,2,3,7,8-PeCDF at 0.068 pg/g, leading to a qualification limit of 0.34 pg/g
- 2,3,4,7,8-PeCDF at 0.05 pg/g, leading to a qualification limit of 0.25 pg/g
- 1,2,3,4,7,8-HxCDF at 0.09 pg/g, leading to a qualification limit of 0.45 pg/g
- 1,2,3,6,7,8-HxCDF at 0.072 pg/g, leading to a qualification limit of 0.36 pg/g
- 2,3,4,6,7,8-HxCDF at 0.064 pg/g, leading to a qualification limit of 0.32 pg/g
- 1,2,3,4,6,7,8-HpCDF at 0.216 pg/g, leading to a qualification limit of 1.08 pg/g
- 1,2,3,4,6,7,8,9-OCDF at 0.18 pg/g, leading to a qualification limit of 0.9 pg/g

Detections in associated samples less than or equal to the qualification limits should be qualified U-MBL. All detected results are greater than the associated qualification limit and no qualification is required.

Qualification: None required.

Rinse Blanks – Rinse blank EB01-07/12/2022 (results reported in SDG 20046) is associated with all samples with results reported in this SDG. The rinse blank was free from contamination.

Qualification: None required.

Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) – LCS/LCSD %Rs and RPDs were within QAPP control limits.

Qualification: None required.

Surrogates – All surrogates (labeled standards) were within control limits.

Qualification: None required.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) – No MS/MSD was performed with this SDG.

Qualification: None required.

Field Duplicate – No field duplicate was submitted with this SDG.

Qualification: None required.

Compound Quantitation – Analyte non-detections were reported as the EDL and qualified U. Analytes detected between the EDL and PQL were reported as J-qualified results by the laboratory. These J qualifiers were retained unless superseded by a more severe qualifier.

If a detected analyte has an ion ratio outside the characteristic ion ratio window, the result is reported as an estimated maximum potential concentration. All results reported as an EMPC (a “K” flag is present in the laboratory qualifier) are qualified J-EMPC unless superseded by a higher priority qualifier.

2,3,7,8-TCDF is not fully resolved on the DB-5MS column; when detected above the PQL on the DB-5MS column, the result was confirmed on a DB-225 column using the instrument ID listed in the case narrative. In cases where two results are reported for 2,3,7,8-TCDF for a sample, the result from the DB-225 column is selected for use and the result from the DB-5MS is qualified DNR-EXC.

In cases where a target analyte is detected at a concentration above the calibrated range, the laboratory’s practice is to report the result with a laboratory qualifier of E without running a dilution so long as the detector is not saturated. The OCDD results for 5 affected samples are qualified J-ACR.

***Qualification:* The following results are qualified:**

- All results reported with a laboratory qualifier of K are qualified J with reason code EMPC.
- All 2,3,7,8-TCDF results reported from the DB-5MS column that are paired with a 2,3,7,8-TCDF result from the DB-225 column are qualified DNR, reason code EXC; note that the reportable_result field for these results are populated with “Yes” by the laboratory and are changed to “No” for the affected results.
- Five OCDD results reported with a laboratory qualifier of E are qualified J with reason code ACR; note that the reportable_result field for these results are populated with “No” by the laboratory and are changed to “Yes” for the affected results.

Qualification Summary Table (results in pg/g):

Sample	Analyte	Lab Value	Lab Qualifier	Validated Value	Validated Qualifier	Reason Code

The following Stage 2A review was performed on the requested analyses. No results were rejected, and analytical completeness is 100%.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No completeness issues were noted.

Qualification: None required.

Sample Delivery and Condition – All samples arrived intact at the laboratory in acceptable condition and temperature and were properly preserved. No other discrepancies were noted.

Qualification: None required.

Holding Times – All samples were prepared and analyzed within their required holding times.

Qualification: None required.

Method Blanks – The method 1613B method bank was contaminated with target analytes including the following:

- 1,2,3,4,6,7,8,9-OCDD at 0.648 pg/g, leading to a qualification limit of 3.24 pg/g
- 1,2,3,4,6,7,8-HpCDF at 0.224 pg/g, leading to a qualification limit of 1.12 pg/g

Detections in associated samples less than or equal to the qualification limits should be qualified U-MBL.

Qualification: None required.

Rinsate Blanks – Rinse blank EB01-07/12/2022 (results reported in SDG 20046) is associated with all samples with results reported in this SDG. The rinse blank was free from contamination.

Qualification: None required.

Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) – LCS/LCSD %Rs and RPDs were within QAPP control limits.

Qualification: None required.

Surrogates – All surrogates (labeled standards) were within control limits.

Qualification: None required.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) – An MS/MSD was not performed with this SDG.

Qualification: None required.

Field Duplicate – No field duplicate was submitted with this SDG.

Qualification: None required.

Compound Quantitation – Analyte non-detections were reported as the EDL and qualified U. Analytes detected between the EDL and PQL were reported as J-qualified results by the laboratory. These J qualifiers were retained unless superseded by a more severe qualifier.

If a detected analyte has an ion ratio outside the characteristic ion ratio window, the result is reported as an estimated maximum potential concentration. All results reported as an EMPC (a “K” flag is present in the laboratory qualifier) are qualified J-EMPC unless superseded by a higher priority qualifier.

2,3,7,8-TCDF is not fully resolved on the DB-5MS column; when detected above the PQL on the DB-5MS column, the result was confirmed on a DB-225 column using the instrument ID listed in the case narrative. In cases where two results are reported for 2,3,7,8-TCDF for a sample, the result from the DB-225 column is selected for use and the result from the DB-5MS is qualified DNR-EXC.

In cases where a target analyte is detected at a concentration above the calibrated range, the laboratory’s practice is to report the result with a laboratory qualifier of E without running a dilution so long as the detector is not saturated. The OCDD results for 4 affected samples are qualified J-ACR.

***Qualification:* The following results are qualified:**

- All results reported with a laboratory qualifier of K are qualified J with reason code EMPC.
- All 2,3,7,8-TCDF results reported from the DB-5MS column that are paired with a 2,3,7,8-TCDF result from the DB-225 column are qualified DNR, reason code EXC; note that the reportable_result field for these results are populated with “Yes” by the laboratory and are changed to “No” for the affected results.
- Four OCDD results reported with a laboratory qualifier of E are qualified J with reason code ACR; note that the reportable_result field for these results are populated with “No” by the laboratory and are changed to “Yes” for the affected results.
- One total heptachloro-p-dioxin result reported with a laboratory qualifier of E has the reportable_result field populated with “No” by the laboratory and is changed to “Yes”. Although total congener results are not validated, this result is reportable.

Qualification Summary Table (results in pg/g):

Sample	Analyte	Lab Value	Lab Qualifier	Validated Value	Validated Qualifier	Reason Code

Stage 2A Review
Data Quality Control (QC)

Site: PHSS-Swan Island Basin	SDG #: 21620
Laboratory: CFA	Project #: DT2002.03.03.01.01
HydroGeoLogic, Inc. Validator: John Tracy	Validation Date: 09.15.2023
HGL QC Reviewer: Ken Rapuano	Peer Review Date: 09.22.23

Client Sample ID	Laboratory Sample ID	Matrix
SIB-SC-D26-13-13.5-07/11/2022	21620001	Sediment
SIB-SC-D25-11-12-07/11/2022	21620002	Sediment
SIB-SC-C24-12-13-07/11/2022	21620003	Sediment

The following Stage 2A review was performed on the requested analyses. No results were rejected, and analytical completeness is 100%.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No completeness issues were noted.

Qualification: None required.

Sample Delivery and Condition – All samples arrived intact at the laboratory in acceptable condition and temperature and were properly preserved.

Qualification: None required.

Holding Times – All samples were prepared 14 days past the required holding time of 1 year. All results should be qualified J/UJ. All samples were analyzed within their required holding times.

***Qualification:* All results in all samples are qualified J/UJ, reason code HTP.**

Method Blanks – The method 1668C method blank associated with this SDG was contaminated with PCB-61/70/74/76 at a level of 6.08 pg/g, leading to a qualification limit of 30.4 pg/g. Associated detections below the qualification threshold should be qualified U.

Qualification: None required.

Equipment Blanks – Rinse blank EB01-07122022 is associated with all samples in this SDG. It was submitted separately from the associated field samples; results for this EB were reported in CFA SDG 20047. While some PCB congeners were detected in this EB, the HGL reviewer confirmed that all PCB congeners detected in the EB were attributable to aqueous sample preparation and that no qualification was required.

Qualification: None required.

Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) – All LCS/LCSD %Rs and RPDs were within QAPP control limits.

Qualification: None required.

Surrogates – All surrogates (EISs) were within QAPP control limits.

Qualification: None required.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) – No MS/MSD analyses were performed with this SDG.

Qualification: None required.

Field Duplicate – No field duplicates were submitted with this SDG.

Qualification: None required.

Laboratory Duplicate – A laboratory duplicate was not performed in this SDG.

Qualification: None required.

Compound Quantitation – Analyte non-detections were reported as ND with the associated DL, LOD, and LOQ included on the result summary pages. This reporting format is equivalent to reporting non-detected data in the DoD “LOD U” format. Analytes detected between the DL and LOQ were reported as J-qualified results by the laboratory. These J qualifiers were retained unless superseded by a more severe qualifier.

If a detected analyte has an ion ratio outside the characteristic ion ratio window, the result is reported as an estimated maximum potential concentration. All results reported as an EMPC are qualified J-EMPC unless superseded by a higher priority qualifier.

Qualification: None required.

Qualification Summary Table (results in pg/g):

The following Stage 2A review was performed on the requested analyses. No results were rejected, and analytical completeness is 100%.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No completeness issues were noted.

Qualification: None required.

Sample Delivery and Condition – All samples arrived intact at the laboratory in acceptable condition and temperature and were properly preserved. No other discrepancies were noted.

Qualification: None required.

Holding Times – All samples were prepared and analyzed within their required holding times.

Qualification: None required.

Method Blanks – The method 1613B method bank was contaminated with target analytes including the following:

- 1,2,3,4,6,7,8-HpCDD at 0.212 pg/g, leading to a qualification limit of 1.06 pg/g
- 1,2,3,4,6,7,8,9-OCDD at 0.636 pg/g, leading to a qualification limit of 3.18 pg/g
- 2,3,7,8-TCDF at 0.122 pg/g, leading to a qualification limit of 0.61 pg/g
- 1,2,3,7,8-PeCDF at 0.116 pg/g, leading to a qualification limit of 0.58 pg/g
- 1,2,3,4,6,7,8-HpCDF at 0.138 pg/g, leading to a qualification limit of 0.69 pg/g

Detections in associated samples less than or equal to the qualification limits should be qualified U-MBL.

Qualification: The following results were qualified U-MBL; the detect_flag for the affected results is changed from Y to N.

- The 2,3,7,8-TCDF results in samples SIB-SC-B25-0-1-07/25/2022, SIB-SC-B32-0-1-07/25/2022, SIB-SC-B33-0-1-08/21/2022, SIB-SC-C06-0-1-08/17/2022, and SIB-SC-C07-0-1-08/18/2022
- The 1,2,3,7,8-PeCDF results in samples SIB-SC-B32-0-1-07/25/2022, SIB-SC-B33-0-1-08/21/2022, and SIB-SC-D37-0-1-08/25/2022
- The 1,2,3,4,6,7,8-HpCDF result in sample SIB-SC-B25-0-1-07/25/2022

Rinsate Blanks – Rinse blank EB01-07/12/2022 (results reported in SDG 20046) is associated with all samples with results reported in this SDG that were sampled on 07/06/2022, 07/07/2022, and 07/08/2022. The rinse blank was free from contamination.

Rinse blank EB04-07/21/2022 (results reported in SDG 20074) is associated with all samples with results reported in this SDG that were sampled on 07/21/2022. The rinse blank was free from contamination.

Rinse blank EB05-07/26/2022 (results reported in SDG 20123) is associated with all samples with results reported in this SDG that were sampled on 07/24/2022 and 07/25/2022. The rinse blank was free from contamination.

Rinse blank EB06-08/04/2022 (results reported in SDG 20187) is associated with all samples with results reported in this SDG that were sampled on 08/04/2022 and 08/05/2022. The rinse blank was contaminated with multiple PCDD/PCDF compounds; however, all detected results in this EB were not substantially different from those reported in the method blank associated with this EB. The detected results reported for EB06-08/04/2022 represent contamination associated with aqueous sample preparation and are not related to cross-contamination in the field. No additional qualification is required.

Rinse blank EB07-08/09/2022 (results reported in SDG 20187) is associated with all samples with results reported in this SDG that were sampled on 08/08/2022, 08/09/2022, and 08/10/2022. The rinse blank was contaminated with the following analytes:

- 1,2,3,4,6,7,8-HpCDD at 1.53 pg/L, leading to a qualification limit of 0.765 pg/g
- 1,2,3,4,6,7,8,9-OCDD at 2.79 pg/L, leading to a qualification limit of 1.395 pg/g
- 1,2,3,4,7,8-HxCDF at 0.902 pg/L, leading to a qualification limit of 0.451 pg/g
- 1,2,3,4,6,7,8-HpCDF at 1.85 pg/L, leading to a qualification limit of 0.925 pg/g

Rinse blank EB08-08/21/2022 (results reported in SDG 20283) is associated with all samples in this SDG that were sampled on 08/16/2022, 08/17/2022, 08/18/2022, and 08/21/2022. The rinse blank was contaminated with 1,2,3,4,6,7,8,9-OCDD at 4.36 pg/L; however, the OCDD result was not substantially different from that reported in the method blank associated with this EB. The detected result reported for EB08-08/21/2022 represents contamination associated with aqueous sample preparation and is not related to cross-contamination in the field. No additional qualification is required.

Rinse blank EB09-08/24/2022 (results reported in SDG 20283) is associated with all samples with results reported in this SDG that were sampled on 08/25/2022. The rinsate blank was contaminated with almost

all target analytes, including:

- 1,2,3,7,8-PeCDD at 2.36 pg/L, leading to a qualification limit of 1.18 pg/g
- 1,2,3,4,7,8-HxCDD at 1.58 pg/L, leading to a qualification limit of 0.790 pg/g
- 1,2,3,6,7,8-HxCDD at 1.58 pg/L, leading to a qualification limit of 0.790 pg/g
- 1,2,3,7,8,9-HxCDD at 1.84 pg/L, leading to a qualification limit of 0.920 pg/g
- 1,2,3,4,6,7,8-HpCDD at 1.39 pg/L, leading to a qualification limit of 0.695 pg/g
- 1,2,3,4,6,7,8,9-OCDD at 2.49 pg/L; this result is comparable to the associated aqueous method blank result and not indicative of potential cross-contamination
- 1,2,3,7,8-PeCDF at 2.78 pg/L, leading to a qualification limit of 1.39 pg/g
- 2,3,4,7,8-PeCDF at 2.34 pg/L, leading to a qualification limit of 1.17 pg/g
- 1,2,3,4,7,8-HxCDF at 2.32 pg/L, leading to a qualification limit of 1.16 pg/g
- 1,2,3,6,7,8-HxCDF at 1.97 pg/L, leading to a qualification limit of 0.985 pg/g
- 2,3,4,6,7,8-HxCDF at 1.15 pg/L, leading to a qualification limit of 0.575 pg/g
- 1,2,3,7,8,9-HxCDF at 1.37 pg/L, leading to a qualification limit of 0.685 pg/g
- 1,2,3,4,6,7,8-HpCDF at 1.21 pg/L; this result is comparable to the associated aqueous method blank result and not indicative of potential cross-contamination
- 1,2,3,4,7,8,9-HpCDF at 1.37 pg/L, leading to a qualification limit of 0.685 pg/g

Detections in associated samples less than or equal to the qualification limits should be qualified U-EBL.

Qualification: The following results were qualified U-EBL; the detect_flag for the affected results is changed from Y to N.

- The 1,2,3,7,8-PeCDD, 1,2,3,4,7,8-HxCDD, 1,2,3,7,8-PeCDF, 2,3,4,7,8-PeCDF, 1,2,3,4,7,8-HxCDF, 1,2,3,7,8,9-HxCDF results in sample SIB-SC-D37-0-1-08/25/2022

Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) – LCS/LCSD %Rs and RPDs were within QAPP control limits.

Qualification: None required.

Surrogates – All surrogates (labeled standards) were within control limits.

Qualification: None required.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) – An MS/MSD was performed using sample SIB-SC-B25-0-1-07/25/2022. All %Rs and RPDs were within QAPP control limits.

Qualification: None required.

Field Duplicate – No field duplicate was submitted with this SDG.

Qualification: None required.

Compound Quantitation – Analyte non-detections were reported as the EDL and qualified U. Analytes detected between the EDL and PQL were reported as J-qualified results by the laboratory. These J qualifiers were retained unless superseded by a more severe qualifier.

If a detected analyte has an ion ratio outside the characteristic ion ratio window, the result is reported as an estimated maximum potential concentration. All results reported as an EMPC (a “K” flag is present in the laboratory qualifier) are qualified J-EMPC unless superseded by a higher priority qualifier.

2,3,7,8-TCDF is not fully resolved on the DB-5MS column; when detected above the PQL on the DB-5MS column, the result was confirmed on a DB-225 column using the instrument ID listed in the case narrative. In cases where two results are reported for 2,3,7,8-TCDF for a sample, the result from the DB-225 column is selected for use and the result from the DB-5MS is qualified DNR-EXC.

In cases where a target analyte is detected at a concentration above the calibrated range, the laboratory's practice is to report the result with a laboratory qualifier of E without running a dilution so long as the detector is not saturated. The OCDD results for 9 affected samples are qualified J-ACR.

Qualification: The following results are qualified:

- All results reported with a laboratory qualifier of K are qualified J with reason code EMPC.
- All 2,3,7,8-TCDF results reported from the DB-5MS column that are paired with a 2,3,7,8-TCDF result from the DB-225 column are qualified DNR, reason code EXC; note that the reportable_result field for these results are populated with "Yes" by the laboratory and are changed to "No" for the affected results.
- Nine OCDD results reported with a laboratory qualifier of E are qualified J with reason code ACR; note that the reportable_result field for these results are populated with "No" by the laboratory and are changed to "Yes" for the affected results.

Qualification Summary Table (results in pg/g):

Sample	Analyte	Lab Value	Lab Qualifier	Validated Value	Validated Qualifier	Reason Code

The following Stage 2A review was performed on the requested analyses. No results were rejected, and analytical completeness is 100%.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No completeness issues were noted.

Qualification: None required.

Sample Delivery and Condition – All samples arrived intact at the laboratory in acceptable condition and temperature and were properly preserved. No other discrepancies were noted.

Qualification: None required.

Holding Times – All samples were prepared and analyzed within their required holding times.

Qualification: None required.

Method Blanks – The method 1613B method bank was contaminated with target analytes including the following:

- 1,2,3,4,7,8-HxCDD at 0.248 pg/g, leading to a qualification limit of 1.24 pg/g
- 1,2,3,6,7,8-HxCDD at 0.196 pg/g, leading to a qualification limit of 0.98 pg/g
- 1,2,3,7,8,9-HxCDD at 0.22 pg/g, leading to a qualification limit of 1.1 pg/g
- 1,2,3,4,6,7,8-HpCDD at 0.506 pg/g, leading to a qualification limit of 2.53 pg/g
- 1,2,3,4,6,7,8,9-OCDD at 1.28 pg/g, leading to a qualification limit of 6.4 pg/g
- 2,3,4,7,8-PeCDF at 0.328 pg/g, leading to a qualification limit of 1.64 pg/g
- 1,2,3,4,7,8-HxCDF at 0.376 pg/g, leading to a qualification limit of 1.88 pg/g
- 1,2,3,6,7,8-HxCDF at 0.256 pg/g, leading to a qualification limit of 1.28 pg/g
- 2,3,4,6,7,8-HxCDF at 0.264 pg/g, leading to a qualification limit of 1.32 pg/g
- 1,2,3,4,6,7,8-HpCDF at 0.502 pg/g, leading to a qualification limit of 2.51 pg/g
- 1,2,3,4,7,8,9-HpCDF at 0.322 pg/g, leading to a qualification limit of 1.61 pg/g
- 1,2,3,4,6,7,8,9-OCDF at 0.806 pg/g, leading to a qualification limit of 4.03 pg/g

Detections in associated samples less than or equal to the qualification limits should be qualified U-MBL.

Qualification: The following results were qualified U-MBL; the detect_flag for the affected results is changed from Y to N.

- The 1,2,3,4,7,8-HxCDD results in samples SIB-SC-H08-0-1-07/26/2022, SIB-SC-K04-0-1-07/27/2022, SIB-SC-L03-9-9.6-07/27/2022, SIB-SC-L04-9-10-07/27/2022, and SIB-SC-L04-10-11-07/27/2022
- The 1,2,3,6,7,8-HxCDD result in sample SIB-SC-I04-8-8.7-08/09/2022
- The 1,2,3,7,8,9-HxCDD results in samples SIB-SC-I04-7-8-08/09/2022, SIB-SC-I04-8-8.7-08/09/2022, SIB-SC-K03-8-9-07/27/2022, and SIB-SC-L04-0-1-07/27/2022
- The 1,2,3,4,6,7,8-HpCDD results in samples SIB-SC-I04-7-8-08/09/2022, SIB-SC-I04-8-8.7-08/09/2022, SIB-SC-K03-7-8-07/27/2022, and SIB-SC-K03-8-9-07/27/2022
- The 2,3,4,7,8-PeCDF results in samples SIB-SC-H08-0-1-07/26/2022, SIB-SC-L03-9-9.6-07/27/2022, SIB-SC-L04-9-10-07/27/2022, and SIB-SC-N00-0-1-08/25/2022
- The 1,2,3,4,7,8-HxCDF results in samples SIB-SC-I04-8-8.7-08/09/2022, SIB-SC-K03-7-8-07/27/2022, SIB-SC-K03-8-9-07/27/2022, SIB-SC-L03-9-9.6-07/27/2022, SIB-SC-L04-9-10-07/27/2022, and SIB-SC-L04-10-11-07/27/2022
- The 1,2,3,6,7,8-HxCDF results in samples SIB-SC-L04-9-10-07/27/2022, SIB-SC-L04-10-11-07/27/2022, and SIB-SC-N00-0-1-08/25/2022
- The 2,3,4,6,7,8-HxCDF results in samples SIB-SC-L03-9-9.6-07/27/2022, SIB-SC-L04-9-10-07/27/2022, and SIB-SC-L04-10-11-07/27/2022
- The 1,2,3,4,6,7,8-HpCDF results in samples SIB-SC-I04-6-7-08/09/2022, SIB-SC-I04-7-8-08/09/2022, SIB-SC-I04-8-8.7-08/09/2022, SIB-SC-K03-7-8-07/27/2022, and SIB-SC-K03-8-9-07/27/2022
- The 1,2,3,4,7,8,9-HpCDF results in samples SIB-SC-L03-9-9.6-07/27/2022 and SIB-SC-L04-9-10-07/27/2022
- The 1,2,3,4,6,7,8,9-OCDF results in samples SIB-SC-I04-8-8.7-08/09/2022, SIB-SC-K03-7-8-07/27/2022, and SIB-SC-K03-8-9-07/27/2022

Rinsate Blanks – Rinse blank EB05-07/26/2022 (results reported in SDG 20123) is associated with all samples with results reported in this SDG that were sampled on 07/26/2022, 07/27/2022, and 07/28/2022. The rinse blank was free from contamination.

Rinse blank EB07-08/09/2022 (results reported in SDG 20187) is associated with all samples with results reported in this SDG that were sampled on 08/09/2022. The rinse blank was contaminated with the following analytes:

- 1,2,3,4,6,7,8-HpCDD at 1.53 pg/L, leading to a qualification limit of 0.765 pg/g
- 1,2,3,4,6,7,8,9-OCDD at 2.79 pg/L, leading to a qualification limit of 1.395 pg/g
- 1,2,3,4,7,8-HxCDF at 0.902 pg/L, leading to a qualification limit of 0.451 pg/g
- 1,2,3,4,6,7,8-HpCDF at 1.85 pg/L, leading to a qualification limit of 0.925 pg/g

Rinse blank EB08-08/21/2022 (results reported in SDG 20283) is associated with all samples in this SDG that were sampled on 08/20/2022. The rinse blank was contaminated with 1,2,3,4,6,7,8,9-OCDD at 4.36 pg/L; however, the OCDD result was not substantially different from that reported in the method blank associated with this EB. The detected result reported for EB08-08/21/2022 represents contamination associated with aqueous sample preparation and is not related to cross-contamination in the field. No additional qualification is required.

Rinse blank EB09-08/24/2022 (results reported in SDG 20283) is associated with all samples with results reported in this SDG that were sampled on 08/25/2022. The rinsate blank was contaminated with almost all target analytes, including:

- 1,2,3,7,8-PeCDD at 2.36 pg/L, leading to a qualification limit of 1.18 pg/g
- 1,2,3,4,7,8-HxCDD at 1.58 pg/L, leading to a qualification limit of 0.790 pg/g
- 1,2,3,6,7,8-HxCDD at 1.58 pg/L, leading to a qualification limit of 0.790 pg/g
- 1,2,3,7,8,9-HxCDD at 1.84 pg/L, leading to a qualification limit of 0.920 pg/g
- 1,2,3,4,6,7,8-HpCDD at 1.39 pg/L, leading to a qualification limit of 0.695 pg/g
- 1,2,3,4,6,7,8,9-OCDD at 2.49 pg/L; this result is comparable to the associated aqueous method blank result and not indicative of potential cross-contamination
- 1,2,3,7,8-PeCDF at 2.78 pg/L, leading to a qualification limit of 1.39 pg/g
- 2,3,4,7,8-PeCDF at 2.34 pg/L, leading to a qualification limit of 1.17 pg/g
- 1,2,3,4,7,8-HxCDF at 2.32 pg/L, leading to a qualification limit of 1.16 pg/g
- 1,2,3,6,7,8-HxCDF at 1.97 pg/L, leading to a qualification limit of 0.985 pg/g
- 2,3,4,6,7,8-HxCDF at 1.15 pg/L, leading to a qualification limit of 0.575 pg/g
- 1,2,3,7,8,9-HxCDF at 1.37 pg/L, leading to a qualification limit of 0.685 pg/g
- 1,2,3,4,6,7,8-HpCDF at 1.21 pg/L; this result is comparable to the associated aqueous method blank result and not indicative of potential cross-contamination
- 1,2,3,4,7,8,9-HpCDF at 1.37 pg/L, leading to a qualification limit of 0.685 pg/g

Rinse blank EB10-09/05/2022 (results reported in SDG 20342) is associated with all samples in this SDG with a sample date of 09/01/2022. The rinse blank was contaminated with 1,2,3,4,6,7,8,9-OCDD at 2.18 pg/L; however, the OCDD result was not substantially different from that reported in the method blank associated with this EB. The detected result reported for EB10-09/05/2022 represents contamination associated with aqueous sample preparation and is not related to cross-contamination in the field. No additional qualification is required.

Detections in associated samples less than or equal to the qualification limits should be qualified U-EBL.

Qualification: The following results were qualified U-EBL; the detect_flag for the affected results is changed from Y to N.

- The 1,2,3,4,7,8-HxCDF result in sample SIB-SC-I04-8-8.7-08/09/2022
- The 1,2,3,4,6,7,8-HpCDF results in samples SIB-SC-I04-7-8-08/09/2022 and SIB-SC-I04-8-8.7-08/09/2022
- The 1,2,3,7,8-PeCDD, 1,2,3,7,8-PeCDF, 2,3,4,7,8-PeCDF results in sample SIB-SC-N00-0-1-08/25/2022

Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) – LCS/LCSD %Rs and RPDs were within QAPP control limits.

Qualification: None required.

Surrogates – All surrogates (labeled standards) were within control limits.

Qualification: None required.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) – An MS/MSD was performed using sample SIB-SC-H06-0-1-07/26/2022. All %Rs were within QAPP control limits in the MS/MSD with the exception of 1,2,3,7,8,9-HxCDD, 1,2,3,4,6,7,8-HpCDD, 1,2,3,4,6,7,8,9-OCDD, and 1,2,3,4,6,7,8,9-OCDF. For 1,2,3,4,6,7,8-HpCDD, 1,2,3,4,6,7,8,9-OCDD, and 1,2,3,4,6,7,8,9-OCDF, the sample concentration was >4x the spike concentration and the %R results are not applicable. The result for 1,2,3,7,8,9-HxCDD in the parent sample should be qualified J. All RPDs were within QAPP control limits.

***Qualification:* The 1,2,3,7,8,9-HxCDD result in sample SIB-SC-H06-0-1-07/26/2022 is qualified J, reason code MSL.**

Field Duplicate – No field duplicate was submitted with this SDG.

Qualification: None required.

Compound Quantitation – Analyte non-detections were reported as the EDL and qualified U. Analytes detected between the EDL and PQL were reported as J-qualified results by the laboratory. These J qualifiers were retained unless superseded by a more severe qualifier.

If a detected analyte has an ion ratio outside the characteristic ion ratio window, the result is reported as an estimated maximum potential concentration. All results reported as an EMPC (a “K” flag is present in the laboratory qualifier) are qualified J-EMPC unless superseded by a higher priority qualifier.

2,3,7,8-TCDF is not fully resolved on the DB-5MS column; when detected above the PQL on the DB-5MS column, the result was confirmed on a DB-225 column using the instrument ID listed in the case narrative. In cases where two results are reported for 2,3,7,8-TCDF for a sample, the result from the DB-225 column is selected for use and the result from the DB-5MS is qualified DNR-EXC.

In cases where a target analyte is detected at a concentration above the calibrated range, the laboratory’s practice is to report the result with a laboratory qualifier of E without running a dilution so long as the detector is not saturated. The OCDD results for 9 affected samples are qualified J-ACR.

***Qualification:* The following results are qualified:**

- All results reported with a laboratory qualifier of K are qualified J with reason code EMPC.
- All 2,3,7,8-TCDF results reported from the DB-5MS column that are paired with a 2,3,7,8-TCDF result from the DB-225 column are qualified DNR, reason code EXC; note that the reportable_result field for these results are populated with “Yes” by the laboratory and are changed to “No” for the affected results.
- Nine OCDD results reported with a laboratory qualifier of E are qualified J with reason code ACR; note that the reportable_result field for these results are populated with “No” by the laboratory and are changed to “Yes” for the affected results.
- Four total heptachloro-p-dioxin results reported with a laboratory qualifier of E have the reportable_result field populated with “No” by the laboratory and are changed to “Yes”. Although total congener results are not validated, these results are reportable.

Qualification Summary Table (results in pg/g):

Sample	Analyte	Lab Value	Lab Qualifier	Validated Value	Validated Qualifier	Reason Code
SIB-SC-H06-0-1-07/26/2022	1,2,3,6,7,8-HEXACHLORODIBENZOFURAN	18.3	JK	18.3	J	EMPC

The following Stage 2A review was performed on the requested analyses. No results were rejected, and analytical completeness is 100%.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No completeness issues were noted.

Qualification: None required.

Sample Delivery and Condition – All samples arrived intact at the laboratory in acceptable condition and temperature and were properly preserved.

Qualification: None required.

Holding Times – Nine samples were prepared between 3 and 24 days past the required holding time of 1 year. All results in these samples should be qualified J/UJ. All samples were analyzed within their required holding times.

***Qualification:* All results in samples SIB-SC-B25-0-1-07/25/2022, SIB-SC-C05-0-1-07/24/2022, SIB-SC-C23-0-1-07/06/2022, SIB-SC-D33-14-14.4-07/07/2022, SIB-SC-F20-0-1-07/21/2022, SIB-SC-J06-10-11-07/26/2022, SIB-SC-K03-8-9-07/27/2022, SIB-SC-L03-9-9.6-07/27/2022, and SIB-SC-L04-10-11-07/27/2022 are qualified J/UJ, reason code HTP.**

Method Blanks – The method 1668C method blank associated with all samples in this SDG was contaminated with the following PCBs; associated detections below the qualification threshold should be qualified U.

PCB Congener	Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-11	37.1	185.5
PCB-20/28	9.42	47.1
PCB-31	5.28	26.4
PCB-61/70/74/76	10.2	51
PCB-86/87/97/109/119/125	9.52	47.6
PCB-90/101/113	10.5	52.5
PCB-110/115	9.52	47.6
PCB-118	7.38	36.9
PCB-129/138/163	9.12	45.6
PCB-180/193	5.36	26.8

The following results are qualified U-MBL:

- SIB-SC-B25-0-1-07/25/2022: PCB-11, PCB-61/70/74/76, PCB-86/87/97/109/119/125, PCB-90/101/113, PCB-129/138/163, PCB-180/193
- SIB-SC-D33-14-14.4-07/07/2022: PCB-11
- SIB-SC-D37-0-1-08/25/2022: PCB-11
- SIB-SC-I04-6-7-08/09/2022: PCB-20/28, PCB-31
- SIB-SC-K03-8-9-07/27/2022: PCB-11, PCB-61/70/74/76, PCB-86/87/97/109/119/125, PCB-90/101/113, PCB-110/115, PCB-129/138/163, PCB-180/193
- SIB-SC-L03-9-9.6-07/27/2022: PCB-11
- SIB-SC-N00-0-1-08/25/2022: PCB-11

Qualification: Detections of contaminated compounds detected below the qualification threshold are qualified U, reason code MBL. Affected results are listed above.

Equipment Blanks – Rinse blank EB01-07122022 (results reported in SDG 20047) is associated with all sediment samples collected on 7.6.22 and 7.7.22. While some PCB congeners were detected in this EB, the HGL reviewer confirmed that all PCB congeners detected in the EB were attributable to aqueous sample preparation and that no qualification was required. Rinse blank EB04-07212022 (results reported in SDG 20081) is associated with all sediment samples collected on 7.21.22; Equipment blank EB05-07262022 (results reported in SDG 20124) is associated with all sediment samples collected from 7.24.22 to 7.27.22; Equipment blank EB07-08092022 (results reported in SDG 20186) is associated with all sediment samples collected on 8.8.22 and 8.9.22; Equipment blank EB09-08242022 (results reported in SDG 20282) is associated with all sediment samples collected on 8.25.22. Due to the differences in mass extracted, the concentrations reported as pg/L in EBs correspond to the same concentration in pg/g in sediment samples. The following PCB congeners were detected in the EBs (does not include PCB congeners considered to be analytical artifacts based on corresponding detections in the associated aqueous MBs). Note that EB contamination is not adjusted for dilution when comparing to sample results.

EB04-07212022

PCB Congener	Concentration (pg/L)	Soil-equivalent Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-3	4.03	4.03	20.15
PCB-18/30	6.94	6.94	34.7
PCB-20/28	6.63	6.63	33.15
PCB-31	6.94	6.94	34.7
PCB-86/87/97/109/119/125	5.29	5.29	26.45
PCB-90/101/113	5.09	5.09	25.45

PCB Congener	Concentration (pg/L)	Soil-equivalent Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-95	6.4	6.4	32
PCB-110/115	6.49	6.49	32.45
PCB-118	5.81	5.81	29.05

All detected results in the associated samples were greater than the corresponding qualification limits and no qualification is required.

Qualification: None required.

EB05-07262022

Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) – All LCS/LCSD %Rs and RPDs were within QAPP control limits.

Qualification: None required.

Surrogates – All surrogates (EISs) were within QAPP control limits.

Qualification: None required.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) – No MS/MSD analyses were performed with this SDG.

Qualification: None required.

Field Duplicate – No field duplicates were submitted with this SDG.

Qualification: None required.

Laboratory Duplicate – A laboratory duplicate was not performed in this SDG.

Qualification: None required.

Compound Quantitation – Analyte non-detections were reported as ND with the associated DL, LOD, and LOQ included on the result summary pages. This reporting format is equivalent to reporting non-detected data in the DoD “LOD U” format. Analytes detected between the DL and LOQ were reported as J-qualified results by the laboratory. These J qualifiers were retained unless superseded by a more severe qualifier.

If a detected analyte has an ion ration outside the characteristic ion ratio window, the result is reported as an estimated maximum potential concentration. All results reported as an EMPC are qualified J-EMPC unless superseded by a higher priority qualifier.

Qualification: None required.

Qualification Summary Table (results in pg):

High-Resolution Gas Chromatography/High-Resolution Mass Spectrometry
PCB Congeners (EPA Method 1668C)
Stage 2A Review
Data Quality Control (QC)

Site: PHSS-Swan Island Basin	SDG #: 21688
Laboratory: CFA	Project #: DT2002.03.03.01.01
HydroGeoLogic, Inc. Validator: John Tracy	Validation Date: 09.26.2023
HGL QC Reviewer: Ken Rapuano	Peer Review Date: 09.27.23

Client Sample ID	Laboratory Sample ID	Matrix
SIB-SED-MG-AAM169-NW-06172	21688001	Stormwater Sediment

The following Stage 2A review was performed on the requested analyses. No results were rejected, and analytical completeness is 100%.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No completeness issues were noted.

Qualification: None required.

Sample Delivery and Condition – All samples arrived intact at the laboratory in acceptable condition and temperature and were properly preserved.

Qualification: None required.

Holding Times – All samples were prepared and analyzed within their required holding times.

Qualification: None required.

Method Blanks – The method 1668C method blank associated with all samples in this SDG was contaminated with the following PCBs; associated detections below the qualification threshold should be qualified U.

PCB Congener	Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-20/28	7.84	39.2
PCB-44/47/65	16.7	83.5
PCB-52	18.4	92
PCB-61/70/74/76	19.8	99
PCB-66	10.1	50.5
PCB-86/87/97/109/119/125	13	65
PCB-90/101/113	18.7	93.5
PCB-95	21.4	107
PCB-99	7.84	39.2
PCB-110/115	21.6	108
PCB-118	13.6	68
PCB-129/138/163	13.5	67.5
PCB-135/151	7	35
PCB-147/149	10.1	50.5
PCB-153/168	9.46	47.3

The following results were qualified U-MBL due to contamination in the method blank

- **SIB-SED-MG-AAM169-NW-061723: PCB-20/28, PCB-44/47/65, PCB-66**

Equipment Blanks – No equipment blanks were submitted with this SDG.

Qualification: None required.

Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) – All LCS/LCSD %Rs and RPDs were within QAPP control limits.

Qualification: None required.

Surrogates – All surrogates (EISs) were within QAPP control limits.

Qualification: None required.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) – No MS/MSD analyses were performed on with this SDG.

Qualification: None required.

Field Duplicate – No field duplicates were submitted with this SDG.

Qualification: None required.

Laboratory Duplicate – A laboratory duplicate was not performed in this SDG.

Qualification: None required.

Compound Quantitation – Analyte non-detections were reported as ND with the associated DL, LOD, and LOQ included on the result summary pages. This reporting format is equivalent to reporting non-detected data in the DoD “LOD U” format. Analytes detected between the DL and LOQ were reported as J-qualified results by the laboratory. These J qualifiers were retained unless superseded by a more severe qualifier.

If a detected analyte has an ion ration outside the characteristic ion ratio window, the result is reported as an estimated maximum potential concentration. All results reported as an EMPC are qualified J-EMPC unless superseded by a higher priority qualifier.

Qualification: None required.

Qualification Summary Table (results in pg/g):

Sample	Analyte	Lab Value	Lab Qualifier	Validated Value	Validated Qualifier	Reason Code

High-Resolution Gas Chromatography/High-Resolution Mass Spectrometry
PCCDs/PCDFs (EPA Method 1613B)
Stage 2A Review
Data Quality Control (QC)

Site: PHSS-Swan Island Basin	SDG #: 21688
Laboratory: CFA	Project #: DT2002.03.03.01.01
HydroGeoLogic, Inc. Validator: John Tracy	Validation Date: 09.26.23
HGL Peer Reviewer: Ken Rapuano	Peer Review Date: 9.27.23

Client Sample ID	Laboratory Sample ID	Matrix
SIB-SED-MG-AAM169-NW-06172	21688001	Stormwater Sediment

The following Stage 2A review was performed on the requested analyses. No results were rejected, and analytical completeness is 100%.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No completeness issues were noted.

Qualification: None required.

Sample Delivery and Condition – All samples arrived intact at the laboratory in acceptable condition and temperature and were properly preserved. No other discrepancies were noted.

Qualification: None required.

Holding Times – All samples were prepared and analyzed within their required holding times.

Qualification: None required.

Method Blanks – The method 1613B method bank was contaminated with target analytes including the following:

- 1,2,3,4,6,7,8-HpCDD at 0.256 pg/g, leading to a qualification limit of 1.28 pg/g
- 1,2,3,4,6,7,8,9-OCDD at 0.536 pg/g, leading to a qualification limit of 2.68 pg/g
- 1,2,3,4,7,8-HxCDF at 0.138 pg/g, leading to a qualification limit of 0.69 pg/g
- 1,2,3,4,6,7,8-HpCDF at 0.186 pg/g, leading to a qualification limit of 0.93 pg/g

Detections in associated samples less than or equal to the qualification limits should be qualified U-MBL.

Qualification: None required.

Rinsate Blanks – No rinsate blanks were associated with this SDG.

Qualification: None required.

Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) – LCS/LCSD %Rs and RPDs were within QAPP control limits.

Qualification: None required.

Surrogates – All surrogates (labeled standards) were within control limits.

Qualification: None required.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) – No MS/MSD analyses were performed with this SDG.

Qualification: None required.

Field Duplicate – No field duplicate was submitted with this SDG.

Qualification: None required.

Compound Quantitation – Analyte non-detections were reported as the EDL and qualified U. Analytes detected between the EDL and PQL were reported as J-qualified results by the laboratory. These J qualifiers were retained unless superseded by a more severe qualifier.

If a detected analyte has an ion ratio outside the characteristic ion ratio window, the result is reported as an estimated maximum potential concentration. All results reported as an EMPC (a “K” flag is present in the laboratory qualifier) are qualified J-EMPC unless superseded by a higher priority qualifier.

***Qualification:* The following results are qualified:**

- **All results reported with a laboratory qualifier of K are qualified J with reason code EMPC.**

Qualification Summary Table (results in pg/g):

Sample	Analyte	Lab Value	Lab Qualifier	Validated Value	Validated Qualifier	Reason Code
SIB-SED-MG-AAM169-NW-061723	1,2,3,4,7,8-HEXACHLORODIBENZOFURAN	0.796	BJK	0.796	J	EMPC

HGL QC Reviewer: Ken Rapuano	Peer Review Date: 09.25.23

Client Sample ID	Laboratory Sample ID	Matrix
SIB-ILS-AAM169-DRY (COMP 17 22)	21705004	Sediment
SIB-ILS-AAM169-WET (COMP 47 52)	21705010	Sediment

The following Stage 2A review was performed on the requested analyses. No results were rejected, and analytical completeness is 100%.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No completeness issues were noted.

Qualification: None required.

Sample Delivery and Condition – All samples arrived intact at the laboratory in acceptable condition and temperature and were properly preserved.

Qualification: None required.

Holding Times – All samples were prepared within their required holding time with the exception of sample SIB-ILS-AAM169-WET (COMP 47 52), which was prepared 92 days beyond its 365 day holding time. All results in this sample should be qualified J/UJ. All samples were analyzed within their required holding times.

***Qualification:* All results in sample SIB-ILS-AAM169-WET (COMP 47 52) are qualified J/UJ, reason code HTP.**

Method Blanks – The method 1668C method blank associated with all samples in this SDG was contaminated with the following PCBs; associated detections below the qualification threshold should be qualified U.

PCB Congener	Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-20/28	7.84	39.2
PCB-44/47/65	16.7	83.5
PCB-52	18.4	92
PCB-61/70/74/76	19.8	99
PCB-66	10.1	50.5
PCB-86/87/97/109/119/125	13	65
PCB-90/101/113	18.7	93.5
PCB-95	21.4	107
PCB-99	7.84	39.2
PCB-110/115	21.6	108
PCB-118	13.6	68

PCB Congener	Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-129/138/163	13.5	67.5
PCB-135/151	7	35
PCB-147/149	10.1	50.5
PCB-153/168	9.46	47.3

All associated detected results are above the associated qualification thresholds and no qualification is required.

Qualification: None required.

Equipment Blanks – No equipment blanks are associated with stormwater sediment samples.

Qualification: None required.

Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) – All LCS/LCSD %Rs and RPDs were within QAPP control limits.

Qualification: None required.

Surrogates – All surrogates (EISs) were within QAPP control limits.

Qualification: None required.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) – No MS/MSD analyses were performed on with this SDG.

Qualification: None required.

Field Duplicate – No field duplicates were submitted with this SDG.

Qualification: None required.

Laboratory Duplicate – A laboratory duplicate was not performed in this SDG.

Qualification: None required.

Compound Quantitation – Analyte non-detections were reported as ND with the associated DL, LOD, and LOQ included on the result summary pages. This reporting format is equivalent to reporting non-detected data in the DoD “LOD U” format. Analytes detected between the DL and LOQ were reported as J-qualified results by the laboratory. These J qualifiers were retained unless superseded by a more severe qualifier.

If a detected analyte has an ion ration outside the characteristic ion ratio window, the result is reported as an estimated maximum potential concentration. All results reported as an EMPC are qualified J-EMPC unless superseded by a higher priority qualifier.

Qualification: None required.

The following Stage 2A review was performed on the requested analyses. No results were rejected, and analytical completeness is 100%.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No completeness issues were noted.

Qualification: None required.

Sample Delivery and Condition – All samples arrived intact at the laboratory in acceptable condition and temperature and were properly preserved. No other discrepancies were noted.

Qualification: None required.

Holding Times – All samples were prepared within their required holding time with the exception of samples SIB-ILS-AAM131-WET (COMP 31 34), SIB-ILS-AAQ005-WET (COMP 36 37), SIB-ILS-AND479-WET (COMP 39 40), SIB-ILS-AAP957-WET (COMP 42 45), SIB-ILS-AAM169-WET (COMP 47 52), and SIB-ILS-AAM104-WET (COMP 54 59), which were prepared 90 days beyond their 365 day holding time. All results in these samples should be qualified J/UJ. All samples were analyzed within their required holding times.

***Qualification:* All results in samples SIB-ILS-AAM131-WET (COMP 31 34) , SIB-ILS-AAQ005-WET (COMP 36 37) , SIB-ILS-AND479-WET (COMP 39 40) , SIB-ILS-AAP957-WET (COMP 42 45) , SIB-ILS-AAM169-WET (COMP 47 52) , and SIB-ILS-AAM104-WET (COMP 54 59) are qualified J/UJ, reason code HTP.**

Method Blanks – The method 1613B method bank was contaminated with target analytes including the following:

- 1,2,3,7,8-PeCDD at 0.172 pg/g, leading to a qualification limit of 0.86 pg/g
- 1,2,3,7,8,9-HxCDD at 0.126 pg/g, leading to a qualification limit of 0.63 pg/g
- 1,2,3,4,6,7,8-HpCDD at 0.32 pg/g, leading to a qualification limit of 1.6 pg/g
- 1,2,3,4,6,7,8,9-OCDD at 3.72 pg/g, leading to a qualification limit of 18.6 pg/g
- 1,2,3,4,7,8-HxCDF at 0.13 pg/g, leading to a qualification limit of 0.65 pg/g
- 1,2,3,6,7,8-HxCDF at 0.104 pg/g, leading to a qualification limit of 0.52 pg/g
- 2,3,4,6,7,8-HxCDF at 0.106 pg/g, leading to a qualification limit of 0.53 pg/g
- 1,2,3,4,6,7,8-HpCDF at 0.198 pg/g, leading to a qualification limit of 0.99 pg/g
- 1,2,3,4,7,8,9-HpCDF at 0.09 pg/g, leading to a qualification limit of 0.45 pg/g
- 1,2,3,4,6,7,8,9-OCDF at 0.278 pg/g, leading to a qualification limit of 1.39 pg/g

Detections in associated samples less than or equal to the qualification limits should be qualified U-MBL.

Qualification: The following results were qualified U-MBL; the detect_flag for the affected results is changed from Y to N.

- The 1,2,3,7,8-PeCDD result in sample SIB-ILS-AAQ005-WET (COMP 36 37)

Rinsate Blanks – No rinse blanks are associated with stormwater sediment samples.

Qualification: None required.

Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) – LCS/LCSD %Rs and RPDs were within QAPP control limits.

Qualification: None required.

Surrogates – All surrogates (labeled standards) were within control limits.

Qualification: None required.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) – An MS/MSD was performed using sample SIB-ILS-AAQ005-DRY (COMP 6 7). All %Rs were within QAPP control limits in the MS/MSD with the exception of 1,2,3,4,6,7,8-HpCDD, 1,2,3,4,6,7,8,9-OCDD, and 1,2,3,4,6,7,8,9-OCDF, which all recovered below control limits in the MS and/or MSD. For 1,2,3,4,6,7,8,9-OCDD, the sample concentration was >4x the spike concentration and the %R results are not applicable. The MS/MSD %Rs for OCDF are considered to be extremely low. The results for 1,2,3,4,6,7,8-HpCDD and 1,2,3,4,6,7,8,9-OCDF in the parent sample should be qualified J. All RPDs were within QAPP control limits.

Qualification: In sample SIB-ILS-AAQ005-DRY (COMP 6 7), the 1,2,3,4,6,7,8-HpCDD result is qualified J, reason code MSL, and 1,2,3,4,6,7,8,9-OCDF results are qualified J, reason code MSLX.

Field Duplicate – No field duplicate was submitted with this SDG.

Qualification: None required.

Compound Quantitation – Analyte non-detections were reported as the EDL and qualified U. Analytes detected between the EDL and PQL were reported as J-qualified results by the laboratory. These J qualifiers were retained unless superseded by a more severe qualifier.

If a detected analyte has an ion ration outside the characteristic ion ratio window, the result is reported as an estimated maximum potential concentration. All results reported as an EMPC (a “K” flag is present in the laboratory qualifier) are qualified J-EMPC unless superseded by a higher priority qualifier.

2,3,7,8-TCDF is not fully resolved on the DB-5MS column; when detected above the PQL on the DB-5MS column, the result was confirmed on a DB-225 column using the instrument ID listed in the case narrative. In cases where two results are reported for 2,3,7,8-TCDF for a sample, the result from the DB-225 column is selected for use and the result from the DB-5MS is qualified DNR-EXC.

In cases where a target analyte is detected at a concentration above the calibrated range, the laboratory's practice is to report the result with a laboratory qualifier of E without running a dilution so long as the detector is not saturated. The OCDD results for 2 affected samples are qualified J-ACR.

Qualification: The following results are qualified:

- All results reported with a laboratory qualifier of K are qualified J with reason code EMPC.
- All 2,3,7,8-TCDF results reported from the DB-5MS column that are paired with a 2,3,7,8-TCDF result from the DB-225 column are qualified DNR, reason code EXC; note that the reportable_result field for these results are populated with "Yes" by the laboratory and are changed to "No" for the affected results.
- Two OCDD results reported with a laboratory qualifier of E are qualified J with reason code ACR; note that the reportable_result field for these results are populated with "No" by the laboratory and are changed to "Yes" for the affected results.

Qualification Summary Table (results in pg/g):

Sample	Analyte	Lab Value	Lab Qualifier	Validated Value	Validated Qualifier	Reason Code

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	2A
Validation Subcontractor	EcoChem
Laboratory	Cape Fear Analytical (CFA)
SDG	19980
HGL Reviewer	Ken Rapuano 2/15/2023
QC Review	Deanna Valdebenito 3/1/2023

General issues: The DV report indicated that no field blanks were associated with the samples submitted in this SDG. Equipment rinsate blanks associated with sediment cores were submitted separately from the associated field samples and the EBs associated with the field samples in this SDG were not provided to the validators. In the judgment of the HGL reviewer, rinse blank EB01-07/12/2022 is the first EB collected after the samples with results reported in this SDG; PCDD/PCDF results for this EB were reported in CFA SDG 20046. This EB was free from all contamination and additional qualification is required.

PCDD/PCDFs – 1613B

Method Blanks: The DV report indicated the results that were qualified U due to method blank contamination. However, several discrepancies were noted in the HGL review.

1. The DV report indicated that the 2,3,4,7,8-PeCDF result for sample SIB-SC-D22-4-5-07/06/2022 was qualified U, reason code MBL. This sample was prepared in batch 50409 and the method blank for that batch did not show contamination for that analyte. **The qualifier for the 2,3,4,7,8-PeCDF result for sample SIB-SC-D22-4-5-07/06/2022 should be J (detection <PQL) with no reason code.**
2. The DV report did not list that the 1,2,3,7,8-PeCDD result for sample SIB-C33-2-3-07072022 should be qualified U-MBL in the table in the report text; however, this qualifier was correctly applied in the master qualification table (Appendix B) and in the EDD. No additional qualification is required.

Reported Results: In several cases, the qualified EDD did not have the correct entry in the “reportable_result” or “detected” fields.

1. Thirteen results for OCDD and one result for total HpCDD were reported from above the calibrated range. The validator correctly qualified the affected results J-ACR. These results were reported by the laboratory with the reportable_result field populated with “No”. **The reportable_result field for all results qualified J-ACR should be changed from “No” to “Yes”.**
2. The laboratory reanalyzed 2,3,7,8-TCDF results on the DB-225 column when this analyte was reported >PQL in a sample. When there were two 2,3,7,8-TCDF results reported for a sample, the data validator correctly selected the results reported from the DB-225 column as the usable result and qualified the corresponding result from the DB-5MS column DNR-EXC. However, the validator incorrectly changed the “detected” field from “Y” to “N” for the DNR-EXC results and did not change the “reportable_result” field from “Yes” to “No”. **The “reportable_result” field should be changed from Yes to No and the “detected” field should be changed from N to Y for all 21 2,3,7,8-TCDF results >PQL reported from the DB-5MS column (the analyses reported from instrument HRP750_2 or HRP763_1).**

Qualification Modification Table (all results in pg/g)

Sample	Analyte	Validated Result	Validated Qualifier	Modified Validated Qualifier	Modified Interpreted Qualifier	Modified Final Reason Code

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	4
Validation Subcontractor	EcoChem
Laboratory	Cape Fear Analytical (CFA)
SDG	20005
HGL Reviewer	Ken Rapuano 8/21/2023
HGL QC Check by	Justin Hersh 8/22/2023

General issues: The DV report indicated that no field blanks were associated with the samples submitted in this SDG. Equipment rinsate blanks associated with sediment cores were submitted separately from the associated field samples and the EBs associated with the field samples in this SDG were not provided to the validators. In the judgment of the HGL reviewer, rinse blank EB01-07/12/2022 is the first EB collected after the samples with results reported in this SDG; PCDD/PCDF results for this EB were reported in CFA SDG 20046. This EB was free from all contamination and additional qualification is required.

The HGL reviewer made several updates to the upload file in order to format the data validation fields in accordance with database loading requirements. These updates included:

- Ensuring that all target results in field samples and field duplicates reported as EMPCs had a reason code of EMPC, replacing the VJ code used by the validator (in some cases in combination with other qualifiers).
- Deleting any calculated rows performed on database results that were erroneously included in the export for qualification.
- Copying the lab_qualifiers field to the interpreted_qualifiers field for non-validated results (such as lab QC samples).
- Changing the reportable_result from No to Yes for results reported with a lab_qualifiers of E (8x OCDD results).

Dioxins/Furans – E1613B

Method Blank: The validator applied U-MBL to four 1,2,3,4,6,7,8-HpCDF results that were reported as EMPCs. The HGL reviewer applied a final qualifier of UJ-MBL,EMPC to the 1,2,3,4,6,7,8-HpCDF for samples SIB-SC-B35-3-4-07/07/2022, SIB-SC-B35-4-5-07/07/2022, FD-03-07/07/2022, and SIB-SC-B35-5-6-07/07/2022. The validator did not change the detect_flag field from Y to N for all 9 results qualified U due to method blank contamination. The HGL reviewer changed the detect_flag field to N for these 9 results.

Result Reporting: The validator incorrectly applied DNR-EXC to the 2,3,7,8-TCDF result for sample SIB-SC-C34-1-2-07/07/2022 reported from the DB-5MS column (instrument HRP763_1) instead of from the confirmation DB-225 column (instrument HRP757_3). The HGL reviewer moved the qualification and reason code to the correct result.

Qualification Modification Table (all results in pg/g)

Sample	Analyte	Validated Result	Validated Qualifier	Modified Validated Qualifier	Modified Interpreted Qualifier	Modified Final Reason Code
SIB-SC-B35-3-4-07/07/2022	1,2,3,4,6,7,8-HpCDF	0.226	U	UJ	UJ	MBL,EMPC
SIB-SC-B35-4-5-07/07/2022	1,2,3,4,6,7,8-HpCDF	0.291	U	UJ	UJ	MBL,EMPC
FD-03-07/07/2022	1,2,3,4,6,7,8-HpCDF	0.202	U	UJ	UJ	MBL,EMPC
SIB-SC-B35-5-6-07/07/2022	1,2,3,4,6,7,8-HpCDF	0.313	U	UJ	UJ	MBL,EMPC

Other updates:

- Changed “detect_flag” field from Y to N for 9 results qualified U due to method blank contamination
- Changed “reportable_result” from No to Yes for 8 OCDD results reported from above the calibrated range
- 2,3,7,8-TCDF results reported for sample SIB-SC-C34-1-2-07/07/2022
 - Changed “reportable_result” from No to Yes for the result reported from the DB-225 column (instrument_id = HRP757_3)
 - Changed “reportable_result” from Yes to No for the result reported from the DB-5MS column (instrument_id = HRP763_1)
- Added an interpreted qualified that corresponded to a reported laboratory qualifier of J or U for QC sample results

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	2A
Validation Subcontractor	EcoChem
Laboratory	Cape Fear Analytical (CFA)
SDG	20006
HGL Reviewer	Ken Rapuano 2/16/2023
QC Review	Deanna Valdebenito 3/1/2023

General issues: The DV report indicated that no field blanks were associated with the samples submitted in this SDG. Equipment rinsate blanks associated with sediment cores were submitted separately from the associated field samples and the EBs associated with the field samples in this SDG were not provided to the validators. In the judgment of the HGL reviewer, rinse blank EB01-07/12/2022 is the first EB collected after the samples with results reported in this SDG; PCDD/PCDF results for this EB were reported in CFA SDG 20046. This EB was free from all contamination and additional qualification is required.

PCDD/PCDFs – 1613B

Reported Results: In several cases, the qualified EDD did not have the correct entry in the “reportable_result” or “detected” fields.

1. Eleven results for OCDD were reported from above the calibrated range. The validator correctly qualified the affected results J-ACR. These results were reported by the laboratory with the reportable_result field populated with “No”. **The reportable_result field for all results qualified J-ACR should be changed from “No” to “Yes”.**
2. The laboratory reanalyzed 2,3,7,8-TCDF results on the DB-225 column when this analyte was reported >PQL in a sample. When there were two 2,3,7,8-TCDF results reported for a sample, the data validator correctly selected the results reported from the DB-225 column as the usable result and qualified the corresponding result from the DB-5MS column DNR-EXC. However, the validator incorrectly changed the “detected” field from “Y” to “N” for the DNR-EXC results and did not change the “reportable_result” field from “Yes” to “No”. **The “reportable_result” field should be changed from Yes to No and the “detected” field should be changed from N to Y for all 17 2,3,7,8-TCDF results >PQL reported from the DB-5MS column (the analyses reported from instrument HRP763_1).**

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	2A
Validation Subcontractor	EcoChem
Laboratory	Cape Fear Analytical (CFA)
SDG	20008
HGL Reviewer	Deanna Valdebenito 3/9/2023
HGL Senior Review	Ken Rapuano 3/17/2023

General issues: The DV report indicated that no field blanks were associated with the samples submitted in this SDG. Equipment rinsate blanks associated with sediment cores were submitted separately from the associated field samples and the EBs associated with the field samples in this SDG were not provided to the validators. In the judgment of the HGL reviewer, rinse blank EB01-07/12/2022 is the first EB collected after the samples with results reported in this SDG; PCDD/PCDF results for this EB were reported in CFA SDG 20046. This EB was free from all contamination and additional qualification is required.

PCDD/PCDFs – 1613B

Reported Results: In several cases, the qualified EDD did not have the correct entry in the “reportable_result” or “detected” fields.

1. Ten results for OCDD were reported from above the calibrated range. The validator correctly qualified the affected results J-ACR. These results were reported by the laboratory with the reportable_result field populated with “No”. **The reportable_result field for all results qualified J-ACR should be changed from “No” to “Yes”.**
2. The laboratory reanalyzed 2,3,7,8-TCDF results on the DB-225 column when this analyte was reported >PQL in a sample. When there were two 2,3,7,8-TCDF results reported for a sample, the data validator correctly selected the results reported from the DB-225 column as the usable result and qualified the corresponding result from the DB-5MS column DNR-EXC. However, the validator incorrectly changed the “detected” field from “Y” to “N” for the DNR-EXC results and did not change the “reportable_result” field from “Yes” to “No”. **The “reportable_result” field should be changed from Yes to No and the “detected” field should be changed from N to Y for all 16 2,3,7,8-TCDF results >PQL reported from the DB-5MS column (the analyses reported from instrument HRP750_2).**

Qualification Modification Table (all results in pg/g)

Sample	Analyte	Validated Result	Validated Qualifier	Modified Validated Qualifier	Modified Interpreted Qualifier	Modified Final Reason Code

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	2A
Validation Subcontractor	EcoChem
Laboratory	Cape Fear Analytical (CFA)
SDG	20009
HGL Reviewer	Ken Rapuano 2/21/2023
QC Review	Deanna Valdebenito 3/1/2023

General issues: The DV report indicated that no field blanks were associated with the samples submitted in this SDG. Equipment rinsate blanks associated with sediment cores were submitted separately from the associated field samples and the EBs associated with the field samples in this SDG were not provided to the validators. In the judgment of the HGL reviewer, rinse blank EB01-07/12/2022 is the first EB collected after the samples with results reported in this SDG; PCDD/PCDF results for this EB were reported in CFA SDG 20046. This EB was free from all contamination and additional qualification is required.

PCDD/PCDFs – 1613B

Field Duplicate: The DV report incorrectly indicates that sample FD-08-07/10/2022 is a field duplicate of sample SIB-SC-B31-2-3-07/10/2022; the correct parent sample ID is SIB-SC-B31-1-2-07102022. The HGL reviewer evaluated the correct sample pair for field duplicate precision performance. Precision criteria were not met for 1,2,3,4,6,7,8-HpCDD or for OCDD. **The 1,2,3,4,6,7,8-HpCDD results for samples SIB-SC-B31-1-2-07102022 and FD-08-07/10/2022 should be qualified J-FDPA; the OCDD results for samples SIB-SC-B31-1-2-07102022 and FD-08-07/10/2022 should be qualified J-FDPR.**

Reported Results: The laboratory reanalyzed 2,3,7,8-TCDF results on the DB-225 column when this analyte was reported >PQL in a sample. When there were two 2,3,7,8-TCDF results reported for a sample, the data validator correctly selected the results reported from the DB-225 column as the usable result and qualified the corresponding result from the DB-5MS column DNR-EXC. However, the validator incorrectly changed the “detected” field from “Y” to “N” for the DNR-EXC results and did not change the “reportable_result” field from “Yes” to “No”. **The “reportable_result” field should be changed from Yes to No and the “detected” field should be changed from N to Y for the 2,3,7,8-TCDF result for sample SIB-SC-F27-1-2-07/10/2022 reported from the DB-5MS column (the analysis reported from instrument HRP750_2).**

Qualification Modification Table (all results in pg/g)

Sample	Analyte	Validated Result	Validated Qualifier	Modified Validated Qualifier	Modified Interpreted Qualifier	Modified Final Reason Code

HGL Reviewer	Ken Rapuano 7/27/2023
HGL QC Review	Justin Hersh 8/18/2023

General issues: The HGL reviewer made several updates to the .txt file in order to format the data validation fields in accordance with database loading requirements. These updates included:

- Ensuring that the detect_flag field was populated with N for all results with an interpreted_qualifier value of U or UJ.
- Ensuring that all target results in field samples and field duplicates reported as EMPCs had a reason code of EMPC (replacing the VJ code used by the validator).
- For results that do not require validation (QC samples, labeled standards, total PCBs), the HGL reviewer copied the “lab_qualifiers” field into the “interpreted_qualifiers” field.
- Ensuring that the validated_yn field was populated with Y for all rows.

PCB Congeners – 1668C

Sample Delivery and Condition: The DV report qualified all results for sample SIB-SC-C34-4-5-07/07/2022 J (detects) or UJ (non-detects), with reason code DAM; however, this is not discussed in the DV report. The HGL reviewer confirmed that both sample jars for this sample arrived cracked and concurs with the qualification assigned by the validators.

MS/MSD: The validator correctly applied qualifiers and reason codes to the PCB-206, PCB-208, and PCB-209 results reported for sample FD-02-07/07/2022; this sample is a field duplicate of sample SIB-SC-C34-4-5-07/07/2022 and in the judgment of the HGL reviewer, the MS/MSD results are applicable to the parent sample as well as to the field duplicate. The PCB-206, PCB-208, and PCB-209 results for sample SIB-SC-C34-4-5-07/07/2022 are qualified J-MSP, J-MSP, and J-MSH,MSP, respectively.

Equipment Blanks: PCB contamination reported in equipment blanks as pg/L can be interpreted as the equivalent of a soil concentration in pg/g due to the 1000:1 mass workup factor between water and soil samples.

Rinse blank EB01-07122022 was submitted separately from the associated field samples; results for this EB were reported in CFA SDG 20047. The DV report states that while some PCB congeners were detected in this EB, no qualification was performed. The HGL reviewer confirmed that all PCB congeners detected in the EB were attributable to aqueous sample preparation and that no qualification was required.

Qualification Modification Table (all results in pg/g)

Sample	Analyte	Validated Result	Validated Qualifier	Modified Validated Qualifier	Modified Interpreted Qualifier	Modified Final Reason Code
SIB-SC-C34-4-5-07/07/2022	PCB-206	13.5	--	J	J	MSP
	PCB-208	8.25	--	J	J	MSP
	PCB-209	6.63	--	J	J	MSH,MSP
Varies	Varies	Varies	Varies	No change to qualifier; changed reason code from VJ to EMPC		

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	2A
Validation Subcontractor	EcoChem
Laboratory	Cape Fear Analytical (CFA)
SDG	20067
HGL Reviewer	Deanna Valdebenito 4/3/2023
HGL Senior Review	Ken Rapuano 4/5/2023

General issues: The DV report indicated that no field blanks were associated with the samples submitted in this SDG. Equipment rinsate blanks associated with sediment cores were submitted separately from the associated field samples and the EBs associated with the field samples in this SDG were not provided to the validators.

PCDD/PCDFs – 1613B

Reported Results: In several cases, the qualified EDD did not have the correct entry in the “reportable_result” or “detected” fields.

- Two results for OCDD and one result for total HpCDD were reported from above the calibrated range. The validator correctly qualified the affected results J-ACR. These results were reported by the laboratory with the reportable_result field populated with “No”. **The reportable_result field for all results qualified J-ACR should be changed from “No” to “Yes”.**
- The laboratory reanalyzed 2,3,7,8-TCDF results on the DB5 CG column when this analyte was reported >PQL in a sample. When there were two 2,3,7,8-TCDF results reported for a sample, the data validator correctly selected the results reported from the DB-225 column as the usable result and qualified the corresponding result from the DB-5MS column DNR-EXC. However, the validator incorrectly changed the “detected” field from “Y” to “N” for the DNR-EXC results and did not change the “reportable_result” field from “Yes” to “No”. **The “reportable_result” field should be changed from Yes to No and the “detected” field should be changed from N to Y for all 8 2,3,7,8-TCDF results >PQL reported from the DB-5MS column (the analyses reported from instrument HRP750_2 or HRP763_1).**

Qualification Modification Table (all results in pg/g)

Sample	Analyte	Validated Result	Validated Qualifier	Modified Validated Qualifier	Modified Interpreted Qualifier	Modified Final Reason Code
8 Samples	2,3,7,8-TCDF	varies	DNR			Change “reportable_result” from “Yes” to “No” Change “detected” from “N” to “Y”
SIB-SC-F08-1-2-07142022	OCDD	11500	J			Change “reportable_result” from “No” to “Yes”
	Total HpCDD	2040	J			
SIB-SC-G07-2-3-07142022	OCDD	4100	J			

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	2A
Validation Subcontractor	EcoChem
Laboratory	Cape Fear Analytical (CFA)
SDG	20068
HGL Reviewer	Deanna Valdebenito 3/7/2023
HGL Senior Review	Ken Rapuano 3/16/2023

General issues: The DV report indicated that no field blanks were associated with the samples submitted in this SDG. Equipment rinsate blanks associated with sediment cores were submitted separately from the associated field samples and the EBs associated with the field samples in this SDG were not provided to the validators. Rinse blank EB03-07/20/2022 is the EB associated with the samples with results reported in this SDG; PCDD/PCDF results for this EB were reported in CFA SDG 20074. This EB was free from all contamination and additional qualification is required.

PCDD/PCDFs – 1613B

Reported Results: In several cases, the qualified EDD did not have the correct entry in the “reportable_result” or “detected” fields.

1. Three results for OCDD and one result for total HpCDD were reported from above the calibrated range. The validator correctly qualified the affected results J-ACR. These results were reported by the laboratory with the reportable_result field populated with “No”. **The reportable_result field for all results qualified J-ACR should be changed from “No” to “Yes”.**
2. The laboratory reanalyzed 2,3,7,8-TCDF results on the DB-225 column when this analyte was reported >PQL in a sample. When there were two 2,3,7,8-TCDF results reported for a sample, the data validator correctly selected the results reported from the DB-225 column as the usable result and qualified the corresponding result from the DB-5MS column DNR-EXC. However, the validator incorrectly changed the “detected” field from “Y” to “N” for the DNR-EXC results and did not change the “reportable_result” field from “Yes” to “No”. **The “reportable_result” field should be changed from Yes to No and the “detected” field should be changed from N to Y for all 8 2,3,7,8-TCDF results >PQL reported from the DB-5MS column (the analyses reported from instrument HRP750_2 or HRP757_2).**

Qualification Modification Table (all results in pg/g)

Sample	Analyte	Validated Result	Validated Qualifier	Modified Validated Qualifier	Modified Interpreted Qualifier	Modified Final Reason Code
8 Samples	2,3,7,8-TCDF	varies	DNR			Change “reportable_result” from “Yes” to “No” Change “detected” from “N” to “Y”
SIB-SC-D19-3-4-07/19/2022	OCDD	6320	J			Change “reportable_result” from “No” to “Yes”
SIB-SC-D19-5-6-07/19/2022	OCDD	10600	J			
SIB-SC-D18-0-1-07/19/2022	Total HpCDD	2330	J			
	OCDD	12600	J			

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	4
Validation Subcontractor	EcoChem
Laboratory	Cape Fear Analytical (CFA)
SDG	20069
HGL Reviewer	Ken Rapuano 8/22/2023
HGL QC Review	Justin Hersh 8/22/2023

General issues: The HGL reviewer made several updates to the .txt file in order to format the data validation fields in accordance with database loading requirements. These updates included:

- Ensuring that the detect_flag field was populated with N for all results with an interpreted_qualifier value of U or UJ.
- Ensuring that all target results in field samples and field duplicates reported as EMPCs had a reason code of EMPC (replacing the VJ code used by the validator).
- For results that do not require validation (QC samples, labeled standards, total PCBs), the HGL reviewer copied the “lab_qualifiers” field into the “interpreted_qualifiers” field.
- Ensuring that the validated_yn field was populated with Y for all rows.

PCB Congeners – 1668C

Additional Qualification: The validator did not add a U or J qualifier to the interpreted_qualifiers field if the result did not receive a validation_qualifiers. The HGL reviewer applied a J or U qualifier to the interpreted_qualifiers field for all results with a lab_qualifiers of J or U, respectively, and did not receive an additional qualifier for QC discrepancies.

Equipment Blanks: PCB contamination reported in equipment blanks as pg/L can be interpreted as the equivalent of a soil concentration in pg/g due to the 1000:1 mass workup factor between water and soil samples.

Rinse blanks EB02-07132022 and EB03-07202022 were submitted separately from the associated field samples; results for these EBs were reported in CFA SDGs 20047 and 20081, respectively. The DV report states that while some PCB congeners were detected in EB02-07132022, no qualification was performed. The DV report incorrectly states that no PCB congeners were detected in EB03-07202022.

EB02-07132022 was contaminated with the following PCB congeners:

- PCB-95 at 4.93 pg/L, leading to a soil qualification level of 24.65 pg/g
- PCB-118 at 7.37 pg/L, leading to a soil qualification level of 36.85 pg/g
- PCB-153/168 at 7.30 pg/L, leading to a soil qualification level of 36.5 pg/g
- Several other PCB congeners that were also detected in the preparation blank and were considered artifacts of the aqueous sample preparation process and not used for qualification of results

All results for PCB-95, PCB-118, and PCB-153/168 were detections >> the qualification level in the samples collected on 7/14/23 and no qualification was applied.

EB03-072022 was contaminated with the following PCB congeners:

- PCB-1 at 8.25 pg/L, leading to a soil qualification level of 41.25 pg/g
- PCB-3 at 5.21 pg/L, leading to a soil qualification level of 26.05 pg/g
- PCB-8 at 16.7 pg/L, leading to a soil qualification level of 83.5 pg/g
- PCB-18/30 at 11.1 pg/L, leading to a soil qualification level of 55.5 pg/g
- PCB-21/33 at 6.53 pg/L, leading to a soil qualification level of 32.65 pg/g
- PCB-31 at 9.52 pg/L, leading to a soil qualification level of 47.6 pg/g
- PCB-90 at 10.2 pg/L, leading to a soil qualification level of 51.0 pg/g
- PCB-95 at 7.95 pg/L, leading to a soil qualification level of 39.75 pg/g
- PCB-110/115 at 9.66 pg/L, leading to a soil qualification level of 48.3 pg/g
- PCB-118 at 7.14 pg/L, leading to a soil qualification level of 35.7 pg/g
- Several other PCB congeners that were also detected in the preparation blank and were considered artifacts of the aqueous sample preparation process and not used for qualification of results

All results for PCB congeners detected in EB03-072022 were detections >> the qualification level in the samples collected on 7/19/23 and no qualification was applied.

Qualification Modification Table (all results in pg/g)

Sample	Analyte	Validated Result	Validated Qualifier	Modified Validated Qualifier	Modified Interpreted Qualifier	Modified Final Reason Code
All	All results with lab_qualifiers like J and no validated_qualifiers	Varies	--	--	J	--
All	All results with lab_qualifiers like U and no validated_qualifiers	Varies	--	--	U	--
Varies	Varies	Varies	Varies	No change to qualifier; changed reason code from VJ to EMPC		

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	2A
Validation Subcontractor	EcoChem
Laboratory	Cape Fear Analytical (CFA)
SDG	20075
HGL Reviewer	Deanna Valdebenito 3/10/2023
HGL Senior Review	Ken Rapuano 3/16/2023

General issues: The DV report indicated that no field blanks were associated with the samples submitted in this SDG. Equipment rinsate blanks associated with sediment cores were submitted separately from the associated field samples and the EBs associated with the field samples in this SDG were not provided to the validators. Rinse blank EB03-07/20/2022 is the EB associated with the samples with results reported in this SDG; PCDD/PCDF results for this EB were reported in CFA SDG 20074. This EB was free from all contamination and additional qualification is required.

PCDD/PCDFs – 1613B

Reported Results: In several cases, the qualified EDD did not have the correct entry in the “reportable_result” or “detected” fields.

1. Nine results for OCDD and three results for total HpCDD were reported from above the calibrated range. The validator correctly qualified the affected results J-ACR. These results were reported by the laboratory with the reportable_result field populated with “No”. **The reportable_result field for all results qualified J-ACR should be changed from “No” to “Yes”.**
2. The laboratory reanalyzed 2,3,7,8-TCDF results on the DB-225 column when this analyte was reported >PQL in a sample. When there were two 2,3,7,8-TCDF results reported for a sample, the data validator correctly selected the results reported from the DB-225 column as the usable result and qualified the corresponding result from the DB-5MS column DNR-EXC. However, the validator incorrectly changed the “detected” field from “Y” to “N” for the DNR-EXC results and did not change the “reportable_result” field from “Yes” to “No”. **The “reportable_result” field should be changed from Yes to No and the “detected” field should be changed from N to Y for all 11 2,3,7,8-TCDF results >PQL reported from the DB-5MS column (the analyses reported from instrument HRP763_1).**

Qualification Modification Table (all results in pg/g)

Sample	Analyte	Validated Result	Validated Qualifier	Modified Final Result	Modified Final Qualifier	Modified Final Reason Code
11 Samples	2,3,7,8-TCDF	varies	DNR	Change "reportable_result" from "Yes" to "No"		Change "detected" from "N" to "Y"
SIB-SC-F25-2-3-07/20/2022	OCDD	4310	J	Change "reportable_result" from "No" to "Yes"

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	4
Validation Subcontractor	EcoChem
Laboratory	Cape Fear Analytical (CFA)
SDG	20076
HGL Reviewer	Deanna Valdebenito 4/28/2023
HGL Senior Review	Ken Rapuano 5/10/2023

General issues: The HGL reviewer made several updates to the .txt file in order to format the data validation fields in accordance with database loading requirements. These updates included:

- Ensuring that the detect_flag field was populated with N for all results with an interpreted_qualifier value of U or UJ.
- Ensuring that all target results in field samples and field duplicates reported as EMPCs had a reason code of EMPC (replacing the VJ code used by the validator).
- For results that do not require validation (QC samples, labeled standards, total PCBs), the HGL reviewer copied the “lab_qualifiers” field into the “interpreted_qualifiers field.

PCB Congeners – 1668C

Equipment Blanks: PCB contamination reported in equipment blanks as pg/L can be interpreted as the equivalent of a soil concentration in pg/g due to the 1000:1 mass workup factor between water and soil samples.

Rinse blank EB04-07212022 was submitted separately from the associated field samples; results for this EB were reported in CFA SDG 20081. The DV report erroneously states that this EB was free from all contamination. This equipment blank contained multiple PCB congeners. The PCB-3 result for sample SIB-SC-F25-3-4-07/20/2022 should be qualified U-EBL. The following results were reported as EMPCs and receive a final qualifier of UJ-EMPC, EBL: PCB-1 and PCB-3 for sample SIB-SC-F25-2-3-07/20/2022; PCB-8 for sample SIB-SC-F25-3-4-07/20/2022; and PCB-3 and PCB-8 results for samples SIB-SC-F25-4-5-07/20/2022 and SIB-SC-F25-5-5.6-07/20/2022. The PCB-1 result for sample SIB-SC-F25-3-4-07/20/2022 was already qualified U due to method blank contamination; this result received an additional reason code of “EBL” but no additional qualification is required. All other results in the associated samples are above the EB action levels.

Qualification Modification Table (all results in pg/g)

Sample	Analyte	Validated Result	Validated Qualifier	Modified Validated Qualifier	Modified Interpreted Qualifier	Modified Final Reason Code
SIB-SC-F25-2-3-07/20/2022	PCB-1	20	J	UJ	UJ	EMPC, EBL
	PCB-3	22.1	J	UJ	UJ	EMPC, EBL
SIB-SC-F25-3-4-07/20/2022	PCB-1	17.5	U	U	U	MBL, EBL

Sample	Analyte	Validated Result	Validated Qualifier	Modified Validated Qualifier	Modified Interpreted Qualifier	Modified Final Reason Code
	PCB-3	18.9	J	U	U	EBL
	PCB-8	73.3	J	UJ	UJ	EMPC, EBL
SIB-SC-F25-4-5-07/20/2022	PCB-3	14.3	J	UJ	U	EMPC, EBL
	PCB-8	43.3	J	UJ	UJ	EMPC, EBL
SIB-SC-F25-5-5.6-07/20/2022	PCB-1	6.52	U	UJ	UJ	EMPC, MBL
	PCB-3	8.25	J	UJ	UJ	EMPC, EBL
	PCB-8	30.4	J	UJ	UJ	EMPC, EBL
Varies	Varies	Varies	J	No change to qualifier; changed reason code from VJ to EMPC for 32 results		

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	2A
Validation Subcontractor	EcoChem
Laboratory	Cape Fear Analytical (CFA)
SDG	20101
HGL Reviewer	Deanna Valdebenito 3/10/2023
HGL Senior Review	Ken Rapuano 3/16/2023

General issues: The DV report indicated that no field blanks were associated with the samples submitted in this SDG. Equipment rinsate blanks associated with sediment cores were submitted separately from the associated field samples and the EBs associated with the field samples in this SDG were not provided to the validators. Rinse blank EB04-07/21/2022 is the EB associated with the samples with results reported in this SDG; PCDD/PCDF results for this EB were reported in CFA SDG 20074. This EB was free from all contamination and additional qualification is required.

PCDD/PCDFs – 1613B

Method Blanks: The DV report indicated the results that were qualified U due to method blank contamination. However, several discrepancies were noted in the HGL review.

1. The DV report did not list that 1,2,3,4,6,7,8-HpCDF for samples SIB-SC-B09-4-5-07/22/2022, SIB-SC-B09-5-6-07/22/2022 and SIB-SC-F20-5-6-07/21/2022 should be qualified U-MBL. The affected results are correctly listed as qualified in the Qualified Data Results Table attached to the DB report and were correctly qualified U-MBL in the EDD. No additional qualification is required.

Reported Results: In several cases, the qualified EDD did not have the correct entry in the “reportable_result” or “detected” fields.

1. Three results for OCDD were reported from above the calibrated range. The validator correctly qualified the affected results J-ACR. These results were reported by the laboratory with the reportable_result field populated with “No”. **The reportable_result field for all results qualified J-ACR should be changed from “No” to “Yes”.**
2. The laboratory reanalyzed 2,3,7,8-TCDF results on the DB-225 column when this analyte was reported >PQL in a sample. When there were two 2,3,7,8-TCDF results reported for a sample, the data validator correctly selected the results reported from the DB-225 column as the usable result and qualified the corresponding result from the DB-5MS column DNR-EXC. However, the validator incorrectly changed the “detected” field from “Y” to “N” for the DNR-EXC results and did not change the “reportable_result” field from “Yes” to “No”. **The “reportable_result” field should be changed from Yes to No and the “detected” field should be changed from N to Y for all 7 2,3,7,8-TCDF results >PQL reported from the DB-5MS column (the analyses reported from instrument HRP763_1).**

Qualification Modification Table (all results in pg/g)

Sample	Analyte	Validated Result	Validated Qualifier	Modified Validated Qualifier	Modified Interpreted Qualifier	Modified Final Reason Code
SIB-SC-F20-3-4-07/21/2022	OCDD	6840	J			Change "reportable_result" from "No" to "Yes"
FD-16-07/21/2022	OCDD	6000	J			
SIB-SC-F18-2-3-07/21/2022	OCDD	10400	J			
7 Samples	2,3,7,8-TCDF	varies	DNR			Change "reportable_result" from "Yes" to "No" Change "detected" from "N" to "Y"

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	2A
Validation Subcontractor	EcoChem
Laboratory	Cape Fear Analytical (CFA)
SDG	20102
HGL Reviewer	Deanna Valdebenito 3/10/2023
HGL Senior Review	Ken Rapuano 3/16/2023

General issues: The DV report indicated that no field blanks were associated with the samples submitted in this SDG. Equipment rinsate blanks associated with sediment cores were submitted separately from the associated field samples and the EBs associated with the field samples in this SDG were not provided to the validators. Rinse blank EB04-07/21/2022 is the EB associated with the samples with results reported in this SDG; PCDD/PCDF results for this EB were reported in CFA SDG 20074. This EB was free from all contamination and additional qualification is required.

PCDD/PCDFs – 1613B

Method Blanks: The DV report indicated the results that were qualified U due to method blank contamination. However, several discrepancies were noted in the HGL review.

1. The DV report summary of results qualified due to method blank contamination contains errors. The preparation batch identified as 51081 is actually batch 51078 and the result that received qualification in this batch is sample SIB-SC-E25-1-2-07/23/2022, not SIB-SC-E24-3-4-07/23/2022 as indicated in the DV report. This appears to be a copy and paste error, as sample SIB-SC-E24-3-4-07/23/2022 is correctly listed in association with preparation batch 50929. The U-MBL qualification of the 1,2,3,7,8-PeCDF result for sample SIB-SC-E25-1-2-07/23/2022 is correctly listed in the Qualified Data Summary Table attached to the DV report and this result is correctly qualified in the Excel EDD. No additional qualification is required.

MS/MSD: The DV report summarized the MS/MSD discrepancies incorrectly. The MSD %R and RPD for OCDD and 1,2,3,4,6,7,8-HpCDF were reversed. The report also assigned reason codes for %R discrepancies to 1,2,3,4,6,7,8-HpCDD and OCDD even though the sample concentration was >4x the spike concentration. **The reason code applied to the 1,2,3,4,6,7,8-HpCDD and OCDD results reported for sample SIB-SC-C25-0-1-07/23/2022 should be changed to J-MSP and J-ACR,MSP, respectively.** Although incorrect in the DV report summary, the qualification for 1,2,3,4,6,7,8-HpCDF is correct as J-MSL,MSP in the electronic data file and no additional qualification is required.

Reported Results: In several cases, the qualified EDD did not have the correct entry in the “reportable_result” or “detected” fields.

1. Eleven results for OCDD were reported from above the calibrated range. The validator correctly qualified the affected results J-ACR. These results were reported by the laboratory with the reportable_result field populated with “No”. **The reportable_result field for all results qualified J-ACR should be changed from “No” to “Yes”.**
2. The laboratory reanalyzed 2,3,7,8-TCDF results on the DB-225 column when this analyte was reported >PQL in a sample. When there were two 2,3,7,8-TCDF results reported for a sample, the data validator correctly selected the results reported from the DB-225 column as the usable result and qualified the corresponding result from the DB-5MS column DNR-EXC. However, the validator incorrectly changed the “detected” field from “Y” to “N” for the DNR-EXC results and did not change the “reportable_result” field from “Yes” to “No”. **The**

“reportable_result” field should be changed from Yes to No and the “detected” field should be changed from N to Y for all 17 2,3,7,8-TCDF results >PQL reported from the DB-5MS column (the analyses reported from instrument HRP763_1).

Qualification Modification Table (all results in pg/g)

Sample	Analyte	Validated Result	Validated Qualifier	Modified Validated Qualifier	Modified Interpreted Qualifier	Modified Final Reason Code
17 Samples	2,3,7,8-TCDF	varies	DNR	Change “reportable_result” from “Yes” to “No” Change “detected” from “N” to “Y”

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	2A
Validation Subcontractor	EcoChem
Laboratory	Cape Fear Analytical (CFA)
SDG	20103
HGL Reviewer	Deanna Valdebenito 3/7/2023
HGL Senior Review	Ken Rapuano 3/16/2023

General issues: The DV report indicated that no field blanks were associated with the samples submitted in this SDG. Equipment rinsate blanks associated with sediment cores were submitted separately from the associated field samples and the EBs associated with the field samples in this SDG were not provided to the validators. The samples collected on 7/23/22 are associated with rinse blank EB04-07212022 (results reported in SDG 20074) and the samples collected on 7/24/22 are associated with rinse blank EB05-07262022 (results reported in SDG 20123). Both EBs were free from all contamination and additional qualification is required.

PCDD/PCDFs – 1613B

Reported Results:

1. Nine results for OCDD and two results for total HpCDD were reported from above the calibrated range. The validator correctly qualified the affected results J-ACR. These results were reported by the laboratory with the reportable_result field populated with “No”. **The reportable_result field for all results qualified J-ACR should be changed from “No” to “Yes”.**
2. The laboratory reanalyzed 2,3,7,8-TCDF results on the DB-225 column when this analyte was reported >PQL in a sample. When there were two 2,3,7,8-TCDF results reported for a sample, the data validator correctly selected the results reported from the DB-225 column as the usable result and qualified the corresponding result from the DB-5MS column DNR-EXC. However, the validator incorrectly changed the “detected” field from “Y” to “N” for the DNR-EXC results and did not change the “reportable_result” field from “Yes” to “No”. **The “reportable_result” field should be changed from Yes to No and the “detected” field should be changed from N to Y for all 11 2,3,7,8-TCDF results >PQL reported from the DB-5MS column (the analyses reported from instrument HRP763_1).**

Qualification Modification Table (all results in pg/g)

Sample	Analyte	Validated Result	Validated Qualifier	Modified Validated Qualifier	Modified Interpreted Qualifier	Modified Final Reason Code
11 Samples	2,3,7,8-TCDF	varies	DNR	Change "reportable_result" from "Yes" to "No"	Change "detected" from "N" to "Y"

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	2A
Validation Subcontractor	EcoChem
Laboratory	Cape Fear Analytical (CFA)
SDG	20104
HGL Reviewer	Deanna Valdebenito 4/28/2023
HGL Senior Review	5/10/2023

General issues: The HGL reviewer made several updates to the .txt file in order to format the data validation fields in accordance with database loading requirements. These updates included:

- Ensuring that the detect_flag field was populated with N for all results with an interpreted_qualifier value of U or UJ.
- Ensuring that all target results in field samples and field duplicates reported as EMPCs had a reason code of EMPC (replacing the VJ code used by the validator).
- For results that do not require validation (QC samples, total PCBs), the HGL reviewer copied the “lab_qualifiers” field into the “interpreted_qualifiers field.

PCB Congeners – 1668C

Method Blanks: The DV report indicated the results that were qualified U due to method blank contamination. However, several discrepancies were noted in the HGL review.

1. The DV did not qualify PCB-198/199 for samples SIB-SC-B09-0-1-07/22/2022 and SIB-SC-B09-4-5-07/22/2022. Analyte 2,2',3,3',4,5,5',6-Octachlorobiphenyl for both samples should be qualified U with reason code MBL because they were below the action level. The final qualifier applied to the PCB-198/199 result for SIB-SC-B09-4-5-07/22/2022 is UJ due to the original result being an EMPC.
2. The DV did not qualify PCB-11 for sample SIB-SC-C05-1-2-07/24/2022; although the result of 324 pg/g was above the action level of 220.5, this sample was analyzed at a 5x dilution, leading to a sample-specific action level of 1102.5 pg/g. The final qualifier applied to the PCB-11 result for SIB-SC-C05-1-2-07/24/2022 is UJ due to the original result being an EMPC.
3. In addition to the two cases described above, there were 13 other instances where a result reported as an EMPC was subsequently qualified U due to method blank contamination. The HGL reviewer changed the qualification of these results to UJ-EMPC, MBL.

Equipment Blanks: PCB contamination reported in equipment blanks as pg/L can be interpreted as the equivalent of a soil concentration in pg/g due to the 1000:1 mass workup factor between water and soil samples.

Rinse blank EB04-07212022 was submitted separately from the associated field samples; results for this EB were reported in CFA SDG 20081. The DV report erroneously states that this EB was free from all contamination. This equipment blank contained multiple PCB congeners. The HGL reviewer applied U-EBL qualification to the PCB-11 results for samples SIB-SC-B09-0-1-07/22/2022, SIB-SC-B09-2-3-07/22/2022, SIB-SC-B09-5-6-07/22/2022, and SIB-SC-B09-3-4-07/22/2022; the PCB-18/30 result for sample SIB-SC-B09-1-2-07/22/2022 was reported as an EMPC and

receives a final qualifier of UJ-EMPC, EBL. Several results were already qualified U due to method blank contamination or UJ due to a combination of being an EMPC affected by method blank contamination. The following results had “EBL” added to the existing reason code(s):

- SIB-SC-B09-0-1-07/22/2022 and SIB-SC-B09-5-6-07/22/2022: PCB-31 and PCB-20/28 (all MBL, EBL)
- SIB-SC-B09-4-5-07/22/2022: PCB-31, PCB-118, PCB-20/28, and PCB-86/87/97/109/119/125 (all EMPC, MBL, EBL)

The DV report did not note that equipment blank EB05-07262022 is associated with the four samples collected on 7.24.22. This equipment blank contained multiple PCB congeners. The PCB-3, -8, -18/30, -32, -37, -21/33, and -45/51 results for sample SIB-SC-C05-4-5-07/24/2022 should be qualified U-EBL. The PCB-31, -17, 16, and -22 results for sample SIB-SC-C05-4-5-07/24/2022 were reported as EMPCs and receive a final qualifier of UJ-EMPC, EBL. All other results in the associated samples are above the EB action levels.

Qualification Modification Table (all results in pg/g)

Sample	Analyte	Validated Result	Validated Qualifier	Modified Validated Qualifier	Modified Interpreted Qualifier	Modified Final Reason Code

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	2A
Validation Subcontractor	EcoChem
Laboratory	Cape Fear Analytical (CFA)
SDG	20360
HGL Reviewer	Ken Rapuano 5/26/2023
HGL QC Review	Justin Hersh 7/5/2023

General issues: The HGL reviewer changed the reason code applied to results reported as EMPCs, replacing the VJ code used by the validator (in some cases in combination with other qualifiers). The HGL reviewer also verified/completed the following formatting items:

- Reason codes were applied to the dqm_remark column instead of the approval_code column, as requested by the database manager.
- Deleting any calculated rows performed on database results that were erroneously included in the export for qualification.
- The HGL reviewer verified that the validated_yn field was populated with Y for all rows.
- The DV report qualified five results reported as EMPCs as U-MBL due to method blank contamination; the HGL reviewer changed the qualifier to UJ-EMPC,MBL.

PCBs as Congeners (Method 1668C)

Method Blank: The narrative indicates that sample SIB-SED-F14-09052022 DRET 10 g was analyzed at a 20x dilution to quantify elevated concentrations of PCBs (the dilution factor of 20x was not indicated in the data report or in the EDD). The laboratory did not provide undiluted results and the HGL reviewer could not determine whether those analytes detected below 20x the method blank action level were detected at similar concentrations in the undiluted fractions (which would be an indication that these results were site-related and not due to a combination of laboratory contamination and dilution effects). In the judgment of the HGL reviewer, the results reported for this sample should be accepted without qualification as artifacts.

Qualification Modification Table (all results in pg/L)

Qualification Modification Table (all results in pg/g)

Sample	Analyte	Validated Result	Validated Qualifier	Modified Validated Qualifier	Modified Interpreted Qualifier	Modified Final Reason Code
SIB-SED-C22-09052022 DRET 1 g/L	PCB-2	6.15	U	UJ	UJ	EMPC,MBL
SIB-SED-C22-09052022 DRET 10 g/L	None required

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	4
Validation Subcontractor	EcoChem
Laboratory	Cape Fear Analytical (CFA)
SDG	20361
HGL Reviewer	Ken Rapuano 2/21/23
QC Review	Deanna Valdebenito 3/1/2023

General issues: None noted.

PCDD/PCDFs – 1613B

No additional issues noted.

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	2A
Validation Subcontractor	MCGI
Laboratory	Cape Fear Analytical (CFA)
SDG	20416
HGL Reviewer	Ken Rapuano 5/5/2023
HGL QC Review	Deanna Valdebenito 5/18/2023

General issues: Note – many of the validation discrepancies identified below are due to the speed with which this validation firm was brought onboard to support this project with limited instruction. As a result, the HGL Project Chemist prepared a Consistency Memorandum and distributed it to all three validation firms in order to provide guidance on validation approaches and instructions on how to complete the EDD for qualifier/reason code upload.

The validator applied all qualifiers in the validation_qualifiers field and did not populate the interpreted_qualifiers field. **The HGL reviewer populated the interpreted_qualifiers field with either the final qualifier for 2,3,7,8-substituted congener results or with the laboratory_qualifiers field for surrogates, calculated values, and QC samples.** The validator also did not apply reason codes. **The HGL reviewer populated the approval_code field with the reason codes applicable to each result.**

The validator treated the PES PSRM0158 as a QC sample. These samples should be validated to the same stage as the environmental samples in the same SDG. The validators populated the laboratory_qualifiers field for the PES with an X flag. **The HGL removed the X applied by the validators and applied all applicable qualifiers to the laboratory_qualifiers, approval_code, and interpreted_qualifiers fields of the PES.**

The DV report indicated that the U1 qualifier was used to differentiate results qualified as artifacts due to blank contamination from results reported non-detections by the laboratory. This U1 qualifier was applied in the validation_qualifiers; all U1 qualifiers that remained after the HGL revisions described below were retained. **The HGL reviewer applied the standard U qualifier to the interpreted_qualifiers field.**

The validator populated the laboratory_qualifiers field with X for all QC samples; this was approved by the HGL reviewer. The HGL reviewer added the X flag to spiked compounds and surrogates as a convenience in filtering the file.

The HGL reviewer applied Y to the validated_yn field in this SDG.

PCDD/PCDFs – 1613B

Reported Results: In several cases, the qualified EDD did not have the correct entry in the “reportable_result” or “detected” fields.

1. Ten results for OCDD and two results for total HpCDD were reported from above the calibrated range. The validator correctly qualified the affected OCDD results J. **The J-qualified OCDD results reported above the calibrated range should have reason code ACR applied.** The total HpCDD results do not require qualification; however, all 12 results were reported by the laboratory with the reportable_result field

populated with “No”. **The reportable_result field for all OCDD and total HpCDD results reported with a laboratory_qualifiers of E should be changed from “No” to “Yes”.**

2. The laboratory reanalyzed 2,3,7,8-TCDF results on the DB-225 column when this analyte was reported >PQL in a sample. When there were two 2,3,7,8-TCDF results reported for a sample, the data validator correctly did not select which of the reported pair of results was the usable result. The HGL reviewer selected the results reported from the DB-225 column as the usable result and qualified the corresponding result from the DB-5MS column DNR-EXC and changed the “reportable_result” field from “Yes” to “No”. **The 2,3,7,8-TCDF results \geq LOQ reported from the DB-5MS column (results \geq LOQ reported from instrument HRP763_1) should be qualified EXC-DNR and have the “reportable_result” field should be changed from Yes to No.**
3. The validator correctly applied a J qualifier to all results reported as EMPCs (results reported with a K in the laboratory_qualifiers field). **The HGL reviewer added “EMPC” to the approval_code field for all EMPCs.**

Method Blanks: The validator did not change the detected_yn field from Y to N for results that were qualified U due to blank contamination. **The HGL reviewer changed this field for all results qualified U due to blank contamination, modified as described below.**

1. The validator applied the blank qualification guidelines from the NFG instead of the “5x” convention. All target analytes are known contaminants or classes of contaminants at the site and project data is being used to support engineering design for remedial action not site characterization. Also, non-detected project data are being reported as MDL U instead of the CLP convention of PQL U. As the NFG protocols lead to a potential overqualification of data, the older 5x rule will be used for this project. The HGL reviewer removed the U1 from the laboratory_qualifiers field for all result that were >5x the corresponding blank concentration (adjusted for dilution), regardless of whether the corresponding result was <LOQ or \geq LOQ. **The HGL reviewer added MBL to the approval_code field for all results qualified U due to method blank contamination.**
2. The validator did not associate the method blank correctly, using the laboratory’s “initial” and “reanalysis” designations instead of preparation date. The HGL reviewer reassessed the impact of method blanks using preparation date instead of the contents of the test_type field. **The HGL reviewer requalified the data based on this reassessment.**
3. The validator applied U qualifiers to non-2,3,7,8-substituted results based on the “B” flag in the laboratory_qualifiers field; however, these results do not require qualification. **The HGL reviewer replaced the validated_qualifiers and interpreted_qualifiers field with the laboratory_qualifiers field contents.**

MS/MSD: The validator did not apply a J qualifier to the 1,2,3,4,6,7,8-heptachlorodibenzofuran result for sample SIB-SC-H08-2-3-07/26/2022. **The HGL reviewer qualified the 1,2,3,4,6,7,8-heptachlorodibenzofuran result for SIB-SC-H08-2-3-07/26/2022 with J-MSP.**

Qualification Modification Table (all results in pg/g)

Due to the number of changes, the revisions made by the HGL reviewer that are bolded in this review memo are documented in the green shaded cells in the file 200416_EDD_T_HGL_QCTrack.xlsx.

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	2A
Validation Subcontractor	EcoChem
Laboratory	Cape Fear Analytical (CFA)
SDG	20417
HGL Reviewer	Deanna Valdebenito 3/10/2023
HGL Senior Review	Ken Rapuano 3/16/2023

General issues: The DV report indicated that no field blanks were associated with the samples submitted in this SDG. Equipment rinsate blanks associated with sediment cores were submitted separately from the associated field samples and the EBs associated with the field samples in this SDG were not provided to the validators. The samples in this SDG are associated with rinse blank rinse blank EB05-07262022 (results reported in SDG 20123). This EB was free from all contamination and additional qualification is required.

PCDD/PCDFs – 1613B

Reported Results: In several cases, the qualified EDD did not have the correct entry in the “reportable_result” or “detected” fields.

1. Thirteen results for OCDD and seven total HpCDD results for were reported from above the calibrated range. The validator correctly qualified the affected results J-ACR. These results were reported by the laboratory with the reportable_result field populated with “No”. **The reportable_result field for all results qualified J-ACR should be changed from “No” to “Yes”.**
2. The laboratory reanalyzed 2,3,7,8-TCDF results on the DB-225 column when this analyte was reported >PQL in a sample. When there were two 2,3,7,8-TCDF results reported for a sample, the data validator correctly selected the results reported from the DB-225 column as the usable result and qualified the corresponding result from the DB-5MS column DNR-EXC. However, the validator incorrectly changed the “detected” field from “Y” to “N” for the DNR-EXC results and did not change the “reportable_result” field from “Yes” to “No”. **The “reportable_result” field should be changed from Yes to No and the “detected” field should be changed from N to Y for all 14 2,3,7,8-TCDF results >PQL reported from the DB-5MS column (the analyses reported from instrument HRP763_1).**

Qualification Modification Table (all results in pg/g)

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	2A
Validation Subcontractor	EcoChem
Laboratory	Cape Fear Analytical (CFA)
SDG	20418
HGL Reviewer	Deanna Valdebenito 3/15/2023
Review Date	Ken Rapuano 3/24/23

General issues: Rinse blank EB04-07212022 was submitted separately from the associated field samples; results for this EB were reported in CFA SDG 20081. This EB was free from all contamination and additional qualification is not required.

PCDD/PCDFs – 1613B

Method Blanks: The DV report indicated the results that were qualified U due to method blank contamination. However, several discrepancies were noted in the HGL review.

1. The DV did not qualify 2,2',3,3',4,5,5',6-Octachlorobiphenyl for samples SIB-SC-B09-0-1-07/22/2022 and SIB-SC-B09-4-5-07/22/2022. Analyte 2,2',3,3',4,5,5',6-Octachlorobiphenyl for both samples should be qualified U with reason code MBL because they did not meet or exceed the action level.
2. The DV did not qualify Polychlorinated Biphenyl (PCB) for sample SIB-SC-B09-4-5-07/22/2022. Analyte Polychlorinated Biphenyl (PCB) for that sample should be qualified U with reason code MBL because it did not meet or exceed the action level.

Qualification Modification Table (all results in pg/g)

Sample	Analyte	Validated Result	Validated Qualifier	Modified Validated Qualifier	Modified Interpreted Qualifier	Modified Final Reason Code
SIB-SC-B09-0-1-07/22/2022 (5x dilution)	2,2',3,3',4,5,5',6-Octachlorobiphenyl	varies	DNR			Change "reportable_result" from "Yes" to "No"
SIB-SC-B09-1-2-07/22/2022 (5x dilution)	2,2',3,3',4,5,5',6-Octachlorobiphenyl	varies	DNR			Change "reportable_result" from "Yes" to "No"
SIB-SC-B09-4-5-07/22/2022	Polychlorinated Biphenyl (PCB)	880	DNR			Change "reportable_result" from "Yes" to "No"

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	2A
Validation Subcontractor	EcoChem
Laboratory	Cape Fear Analytical (CFA)
SDG	20419
HGL Reviewer	Deanna Valdebenito 5/3/2023
HGL Senior Reviewer	Ken Rapuano 5/11/2023

General issues:

The HGL reviewer made several updates to the .txt file in order to format the data validation fields in accordance with database loading requirements. These updates included:

- Ensuring that the detect_flag field was populated with N for all results with an interpreted_qualifier value of U or UJ.
- Ensuring that all target results in field samples and field duplicates reported as EMPCs had a reason code of EMPC (replacing the VJ code used by the validator).
- The validator completed the interpreted qualifier for all PCDD/PCDF results. Although validation and qualification is not required for results reported for non-2,3,7,8-substituted congeners, the HGL reviewer did not override the validation_qualifier, reason code, and interpreted_qualifier applied by the validators. The HGL reviewer ensured that the interpreted_qualifier field was populated for all applicable results.

Dioxins/Furans – E1613B

MS/MSDs: The validator qualified the 2,3,7,8-TCDF result for sample SIB-SC-I08-2-3-07/28/2022 based on the MS/MSD results reported from the DB-5 column (instrument HRP763) instead of the DB-225 (instrument HRP757) column that was used to report the accepted sample result. **The MS/MSD results from the DB-225 column did not show a %R discrepancy and the HGL reviewer removed the MSH reason code from this result.** The MSP reason code and J qualifier applied by the validators remain applicable for this result.

Field Duplicates: The FD comparison summary table contains several compound misidentifications and errors. The table incorrectly identifies discrepancies for 1,2,3,4,7,8-HxCDD and 1,2,3,4,7,8,9-HpCDD; the discrepancies are for 1,2,3,4,7,8-HxCDF and 1,2,3,4,7,8,9-HpCDF, respectively. The validator applied the qualifiers and reason codes to the correct analytes in the EDD and no further action is required. The table has two entries for OCDF; the validator correctly applied qualifiers to both OCDF and OCDD in the EDD and no further action is required. The table omits an absolute difference discrepancy for 2,3,4,6,7,8-HxCDD. **The 2,3,4,6,7,8-HxCDD results for samples SIB-SC-I08-1-2-07/28/2022 and FD-22-07/28/2022 should be qualified J-FDPA.**

Equipment Blanks: The data validation report did not associate EB06-08/04/2022 (results reported in SDG 20187) with the five samples collected on 8.3.22 reported in this SDG. This EB was contaminated with multiple PCDD/PCDF compounds; however, all detected results in this EB were not substantially different from those reported in the method blank associated with this EB. In the judgment of the HGL reviewer, the detected results

reported for EB06-08/04/2022 represent contamination associated with aqueous sample preparation and are not related to cross-contamination in the field. No additional qualification is required.

Qualification Modification Table (all results in pg/g)

Sample	Analyte	Validated Result	Validated Qualifier	Modified Validated Qualifier	Modified Interpreted Qualifier	Modified Final Reason Code
SIB-SC-I08-1-2-07/28/2022	2,3,4,6,7,8-HxCDF	32.3	--	J	J	FDPA
FD-22-07/28/2022	2,3,4,6,7,8-HxCDF	100	--	J	J	FDPA
SIB-SC-I08-2-3-07/28/2022	2,3,7,8-TCDF	9.74	J	J	J	MSP
Varies	Varies	Varies	J	No change to qualifier; changed reason code from VJ to EMPC		

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	2A
Validation Subcontractor	EcoChem
Laboratory	Cape Fear Analytical (CFA)
SDG	20420
HGL Reviewer	Deanna Valdebenito 4/28/2023
HGL Senior Review	Ken Rapuano 5/11/2023

General issues: The sample summary table included in this DV report was copied from the DV report for SDG 20419 and was not updated by the validators to reflect the samples in SDG 20420.

The HGL reviewer made several updates to the .txt file in order to format the data validation fields in accordance with database loading requirements. These updates included:

- Ensuring that the detect_flag field was populated with N for all results with an interpreted_qualifier value of U or UJ.
- Ensuring that all target results in field samples and field duplicates reported as EMPCs had a reason code of EMPC (replacing the VJ code used by the validator).
- The validator completed the interpreted qualifier for all PCDD/PCDF results. Although validation and qualification are not required for results reported for non-2,3,7,8-substituted congeners, the HGL reviewer did not override the validation_qualifier, reason code, and interpreted_qualifier applied by the validators. The HGL reviewer ensured that the interpreted_qualifier field was populated for all applicable results.

Dioxins/Furans – E1613B

MS/MSD: The DV report did not evaluate the MS/MSDs performed on sample SIB-SC-E10-2-3-08/05/2022. This MS/MSD pair had %R discrepancies for 1,2,3,4,6,7,8-HpCDD, 1,2,3,4,6,7,8-HpCDF, OCDF and an RPD discrepancy for 1,2,3,4,6,7,8-HpCDF. **The 1,2,3,4,6,7,8-HpCDD and OCDF results for sample SIB-SC-E10-2-3-08/05/2022 should be qualified J-MSL. The 1,2,3,4,6,7,8-HpCDF result for sample SIB-SC-E10-2-3-08/05/2022 should be qualified J-MSH, MSP.** The OCDD %R discrepancies are not relevant due to the native OCDD concentration being >4x the spike concentration.

Equipment Blanks: The validators correctly associated all sample results in this SDG with equipment blank EB06-08/04/2022. Although the DV report indicates this EB was free from contamination, this EB was contaminated with multiple PCDD/PCDF compounds. However, all detected results in this EB were not substantially different from those reported in the method blank associated with this EB and the HGL reviewer concurs that no additional qualification is required.

Qualification Modification Table (all results in pg/g)

Sample	Analyte	Validated Result	Validated Qualifier	Modified Validated Qualifier	Modified Interpreted Qualifier	Modified Final Reason Code
SIB-SC-E10-2-3-08/05/2022	1,2,3,4,6,7,8-HpCDD	341	--	J	J	MSL
	OCDF	423	--	J	J	MSL
	1,2,3,4,6,7,8-HpCDF	140	--	J	J	MSH, MSP
Varies	Varies	Varies	J	No change to qualifier; changed reason code from VJ to EMPC for 16 results		

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	2A
Validation Subcontractor	EcoChem
Laboratory	Cape Fear Analytical (CFA)
SDG	20421
HGL Reviewer	Deanna Valdebenito 3/14/2023
HGL Senior Review	Ken Rapuano 3/23/2023

General issues: The DV report indicated that no field blanks were associated with the samples submitted in this SDG. Equipment rinsate blanks associated with sediment cores were submitted separately from the associated field samples and the EBs associated with the field samples in this SDG were not provided to the validators. In the judgment of the HGL reviewer, rinse blank EB01-07/12/2022 is the first EB collected after the samples with results reported in this SDG; PCDD/PCDF results for this EB were reported in CFA SDG 20046. This EB was free from all contamination and additional qualification is required.

PCDD/PCDFs – 1613B

Method Blanks: The DV report indicated the results that were qualified U due to method blank contamination. However, several discrepancies were noted in the HGL review.

1. The DV report summary listed 1,2,3,4,7,8-HxCDF for SIB-SC-E09-4-5-08/05/2022 twice. The second instance should be 1,2,3,7,8-PeCDF. The correct qualifiers were assigned in the Qualified Data Summary Table and in the Excel EDD. No additional qualification is required.
2. The DV report indicated that the 1,2,3,7,8-PeCDD result for sample SIB-SC-E06-5-6-08/08/2022 was qualified UJ, reason code MBL,VJ. This sample however was not part of batch 51273; the method blank for batch 51294 was not contaminated with 1,2,3,7,8-PeCDD and this result does not need to be qualified U. **The 1,2,3,7,8-PeCDD result for sample SIB-SC-E06-5-6-08/08/2022 should be qualified J, with a final reason code of VJ (due to being an EMPC).**

Reported Results: In several cases, the qualified EDD did not have the correct entry in the “reportable_result” or “detected” fields.

1. Eleven results for OCDD and one result for total HpCDD were reported from above the calibrated range. The validator correctly qualified the affected results J-ACR. These results were reported by the laboratory with the reportable_result field populated with “No”. **The reportable_result field for all results qualified J-ACR should be changed from “No” to “Yes”.**
2. The laboratory reanalyzed 2,3,7,8-TCDF results on the DB-225 column when this analyte was reported >PQL in a sample. When there were two 2,3,7,8-TCDF results reported for a sample, the data validator correctly selected the results reported from the DB-225 column as the usable result and qualified the corresponding result from the DB-5MS column DNR-EXC. However, the validator incorrectly changed the “detected” field from “Y” to “N” for the DNR-EXC results and did not change the “reportable_result” field from “Yes” to “No”. **The “reportable_result” field should be changed from Yes to No and the “detected” field should be changed from N to Y for all 13 2,3,7,8-TCDF results >PQL reported from the DB-5MS column (the analyses reported from instrument HRP750_2 or HRP763_1).**

Qualification Modification Table (all results in pg/g)

Sample	Analyte	Validated Result	Validated Qualifier	Modified Validated Qualifier	Modified Interpreted Qualifier	Modified Final Reason Code
13 Samples	2,3,7,8-TCDF	varies	DNR	Change "reportable_result" from "Yes" to "No" Change "detected" from "N" to "Y"

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	2A
Validation Subcontractor	EcoChem
Laboratory	Cape Fear Analytical (CFA)
SDG	20422
HGL Reviewer	Ken Rapuano 5/17/2023
HGL QC Check	Deanna Valdebenito 5/18/2023

General issues: The HGL reviewer made several updates to the .txt file in order to format the data validation fields in accordance with database loading requirements. These updates included:

- Ensuring that all target results in field samples and field duplicates reported as EMPCs had a reason code of EMPC, replacing the VJ code used by the validator (135x results, in some cases in combination with other qualifiers).
- Moving the validation reason codes from the approval_code column to the dqm_remark column as requested by the database manager.
- Adding “Y” to the “validated_yn” field for all data rows in this EDD.
- Deleting any calculated rows performed on database results that were erroneously included in the export for qualification.
- Copying the lab_qualifiers field to the interpreted_qualifiers field for non-validated results (such as lab QC samples).
- Changing reportable_result from Yes to No and changing detect_flag from N to Y for 2,3,7,8-TCDF results qualified DNR-EXC by the validator (7x 2,3,7,8-TCDF results).
- Changing the reportable_result from No to Yes for results reported with a lab_qualifiers of E (6x OCDD results).

Dioxins/Furans – E1613B

SRM Sample: The DV report did not include the SRM sample in the validation, treating it as a QC sample.

- The HGL reviewer added a validation_qualifiers of J and reason code EMPC to the results reported for 1,2,3,4,7,8-HxCDD, 1,2,3,7,8-PeCDD, 2,3,7,8-TCDF, and 2,3,7,8-TCDD.
- Verified that all reported results were > action level associated with detections in the method blank.
- Verified that the 2,3,7,8-TCDF result was <LOQ and did not require analysis on the DB-225 column.

Method Blank: The validator qualified the OCDF results for samples SIB-SC-D05-3-4-08/09/2022 and SIB-SC-D05-4-5-08/09/2022 U-MBL. These results are >5x the concentration detected in the associated method blank. The HGL reviewer removed the U qualifier and MBL reason code from the OCDF results reported for samples SIB-SC-D05-3-4-08/09/2022 and SIB-SC-D05-4-5-08/09/2022.

Equipment Blank: The DV report indicated that no field blanks were associated with the samples submitted in this SDG. Equipment rinse blanks associated with sediment cores were submitted separately from the associated field samples and the EBs associated with the field samples in this SDG were not provided to the validators at the time this SDG was validated. In the judgment of the HGL reviewer, rinse blank EB07-08/09/2022 is associated with the samples with results reported in this SDG; PCDD/PCDF results for this EB were reported in CFA SDG 20187. This equipment blank was contaminated with four PCDD/PCDF analytes. Due to the differences in preparation factors between aqueous and solid samples, the

HGL reviewer determined that a concentration reported as X pg/L in the rinse blank corresponded approximately to a relative soil concentration of X/10 pg/g. The contamination in the equipment blank and the corresponding soil action levels are presented in the following table.

Analyte	Aqueous Concentration (pg/L)	Equivalent Soil Concentration (pg/g)	Soil Action Level (pg/g)
1,2,3,4,6,7,8-HpCDD	1.53	0.153	0.765
OCDD	2.79	0.279	1.40
1,2,3,4,7,8-HxCDF	0.902	0.0902	0.451
1,2,3,4,6,7,8-HpCDF	1.85	0.185	0.925

The HGL reviewer applied U-EBL to the 1,2,3,4,7,8-HxCDF results reported for samples SIB-SC-E05-5-6-08/08/2022 and SIB-SC-D05-5-6-08/09/2022. The SRM is not affected by field cross-contamination and was not included in the rinse blank evaluation.

Qualification Modification Table (all results in pg/g)

Sample	Analyte	Validated Result	Validated Qualifier	Modified Validated Qualifier	Modified Interpreted Qualifier	Modified Final Reason Code
SIB-SC-E05-5-6-08/08/2022	1,2,3,4,7,8-HxCDF	0.359	UJ	UJ	UJ	MBL,EBL,EMPC
SIB-SC-D05-3-4-08/09/2022	OCDF	6.39	U	--	--	--

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	2A
Validation Subcontractor	EcoChem
Laboratory	Cape Fear Analytical (CFA)
SDG	20423
HGL Reviewer	Ken Rapuano 5/23/2023
HGL QC Review	Deanna Valdebenito (5.26.23)

General issues: The HGL reviewer made several updates to the .txt file in order to format the data validation fields in accordance with database loading requirements. These updates included:

- Ensuring that all target results in field samples and field duplicates reported as EMPCs had a reason code of EMPC, replacing the VJ code used by the validator (in some cases in combination with other qualifiers).
- Moving the validation reason codes from the approval_code column to the dqm_remark column as requested by the database manager.
- Deleting any calculated rows performed on database results that were erroneously included in the export for qualification.
- Copying the lab_qualifiers field to the interpreted_qualifiers field for non-validated results (such as lab QC samples), and converting non-standard flags to standard qualifiers (eg, K into J).
- The HGL reviewer verified that the validated_yn field was populated with Y for all rows.
- The HGL reviewer verified that all 2,3,7,8-TCDF results qualified DNR-EXC had a “reportable_result” field populated with “No”.
- The HGL reviewer verified that results reported from above the calibrated range had the “reportable_result” field populated with “Yes”.

Dioxins/Furans – E1613B

Equipment Blank: The DV report correctly associates equipment blanks EB07-08/09/2022 with the samples submitted in this SDG. PCDD/PCDF results for EB07-08/09/2022 were reported in CFA SDG 20187. The DV report indicates that EB07-08/09/2022 was free from contamination; however, this equipment blank was contaminated with four PCDD/PCDF analytes. Due to the differences in preparation factors between aqueous and solid samples, the HGL reviewer determined that a concentration reported as X pg/L in the rinse blank corresponded approximately to a relative soil concentration of X/10 pg/g. The contamination in the equipment blank and the corresponding soil action levels are presented in the following table.

Analyte	Aqueous Concentration (pg/L)	Equivalent Soil Concentration (pg/g)	Soil Action Level (pg/g)
1,2,3,4,6,7,8-HpCDD	1.53	0.153	0.765
OCDD	2.79	0.279	1.40
1,2,3,4,7,8-HxCDF	0.902	0.0902	0.451
1,2,3,4,6,7,8-HpCDF	1.85	0.185	0.925

- The 1,2,3,4,6,7,8-HpCDD result for sample SIB-SC-B10-5-6-08/11/2022 is below the action level; the HGL reviewer qualified this result U-EBL.
- The 1,2,3,4,7,8-HxCDF results for samples SIB-SC-F05-3-4-08/10/2022, SIB-SC-F05-4-5-08/10/2022, SIB-SC-F05-5-6-08/10/2022, SIB-SC-B10-1-2-08/11/2022, and SIB-SC-B10-4-5-08/11/2022 are below the action level; all five results are already qualified U-MBL due to contamination in the associated method blank, and the HGL reviewer added EBL to final reason code for each of these results.
- The 1,2,3,4,6,7,8-HpCDF results for samples SIB-SC-B10-2-3-08/11/2022 and SIB-SC-B10-5-6-08/11/2022 are below the action level; both results are already qualified U-MBL,EMPC due to contamination in the associated method blank and being EMPCs; the HGL reviewer added EBL to final reason code for both of these results.

Qualification Modification Table (all results in pg/g)

Sample	Analyte	Validated Result	Validated Qualifier	Modified Validated Qualifier	Modified Interpreted Qualifier	Modified Final Reason Code
SIB-SC-F05-3-4-08/10/2022	1,2,3,4,7,8-HxCDF	0.328	U	U	U	MBL,EBL
SIB-SC-F05-4-5-08/10/2022	1,2,3,4,7,8-HxCDF	0.373	U	U	U	MBL,EBL
SIB-SC-F05-5-6-08/10/2022	1,2,3,4,7,8-HxCDF	0.151	U	U	U	MBL,EBL
SIB-SC-B10-1-2-08/11/2022	1,2,3,4,7,8-HxCDF	0.078	U	U	U	MBL,EBL

SIB-SC-B10-4-5-08/11/2022	1,2,3,4,7,8-HxCDF	0.11	U	U	U	MBL,EBL
SIB-SC-B10-5-6-08/11/2022	1,2,3,4,6,7,8-HpCDF	0.133	UJ	UJ	UJ	MBL,EMPC,EBL
	1,2,3,4,6,7,8-HpCDD	0.716	J	U	U	EBL

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	2A
Validation Subcontractor	EcoChem
Laboratory	Cape Fear Analytical (CFA)
SDG	20425
HGL Reviewer	Ken Rapuano 5/23/2023
HGL QC Review	Deanna Valdebenito (5.26.23)

General issues: The HGL reviewer made several updates to the .txt file in order to format the data validation fields in accordance with database loading requirements. These updates included:

- Ensuring that all target results in field samples and field duplicates reported as EMPCs had a reason code of EMPC, replacing the VJ code used by the validator (in some cases in combination with other qualifiers).
- Moving the validation reason codes from the approval_code column to the dqm_remark column as requested by the database manager.
- Deleting any calculated rows performed on database results that were erroneously included in the export for qualification.
- Copying the lab_qualifiers field to the interpreted_qualifiers field for non-validated results (such as lab QC samples), and converting non-standard flags to standard qualifiers (eg, K into J).
- The HGL reviewer verified that the validated_yn field was populated with Y for all rows.
- The HGL reviewer verified that all 2,3,7,8-TCDF results qualified DNR-EXC had a “reportable_result” field populated with “No”.
- The HGL reviewer verified that results reported from above the calibrated range had the “reportable_result” field populated with “Yes”.

Dioxins/Furans – E1613B

Field Duplicate: The parent sample associated with FD-39-08/16/2022 (results reported in SDG 20426) is SIB-SC-G04-5-6-08162022, not SIB-SC-G04-4-5-08/16/2022 as indicated in the DV report. The HGL reviewer reviewed duplicate precision between the correct duplicate pair and confirmed that the evaluation in the DV report is correct and the parent sample misidentification is a typo and not a mis-association.

Equipment Blank: The DV report correctly associates equipment blanks EB07-08/09/2022 and EB08-08/21/2022 with the samples submitted in this SDG. PCDD/PCDF results for EB07-08/09/2022 were reported in CFA SDG 20187 and the results for EB08-08/21/2022 were reported in SDG 20283. The DV report indicates that EB07-08/09/2022 was free from contamination; however, this equipment blank was contaminated with four PCDD/PCDF analytes. Due to the differences in preparation factors between aqueous and solid samples, the HGL reviewer determined that a concentration reported as X pg/L in the rinse blank corresponded approximately to a relative soil concentration of X/10 pg/g. The contamination in the equipment blank and the corresponding soil action levels are presented in the following table.

Analyte	Aqueous Concentration (pg/L)	Equivalent Soil Concentration (pg/g)	Soil Action Level (pg/g)
1,2,3,4,6,7,8-HpCDD	1.53	0.153	0.765
OCDD	2.79	0.279	1.40

Analyte	Aqueous Concentration (pg/L)	Equivalent Soil Concentration (pg/g)	Soil Action Level (pg/g)
1,2,3,4,7,8-HxCDF	0.902	0.0902	0.451
1,2,3,4,6,7,8-HpCDF	1.85	0.185	0.925

EB07-08/09/2022 is associated with the samples collected on 8/11/22. All results for the analytes detected in EB07-08/09/2022 were much greater than the corresponding action levels in the associated samples and no additional qualification is required.

EB08-08/21/2022 is associated with the samples collected on 8/16/22. The OCDD result in EB08-08/21/2022 is attributable to aqueous prep batch contamination and is not considered to be the result of cross-contamination in the field; no other PCDD/PCDF compounds were detected in EB08-08/21/2022 and no additional qualification is required.

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	2A
Validation Subcontractor	EcoChem
Laboratory	Cape Fear Analytical (CFA)
SDG	20426
HGL Reviewer	Ken Rapuano 5/23/2023
HGL QC Check by	Deanna Valdebenito (5/25/23)

General issues: The HGL reviewer made several updates to the .txt file in order to format the data validation fields in accordance with database loading requirements. These updates included:

- Ensuring that all target results in field samples and field duplicates reported as EMPCs had a reason code of EMPC, replacing the VJ code used by the validator (in some cases in combination with other qualifiers).
- Moving the validation reason codes from the approval_code column to the dqm_remark column as requested by the database manager.
- Deleting any calculated rows performed on database results that were erroneously included in the export for qualification.
- Copying the lab_qualifiers field to the interpreted_qualifiers field for non-validated results (such as lab QC samples), and converting non-standard flags to standard qualifiers (eg, K into J).
- The HGL reviewer verified that the validated_yn field was populated with Y for all rows.
- The HGL reviewer verified that all 2,3,7,8-TCDF results qualified DNR-EXC had a “reportable_result” field populated with “No”.
- No results were reported from above the calibrated range and it was not necessary to confirm that the “reportable_result” field was populated with “Yes” for these results.

Dioxins/Furans – E1613B

Field Duplicate: The parent sample associated with FD-39-08/16/2022 is SIB-SC-G04-5-6-08162022, not SIB-SC-G04-4-5-08/16/2022 as indicated in the DV report. The HGL reviewer reviewed duplicate precision between the correct duplicate pair and confirmed that the evaluation in the DV report is correct and the parent sample misidentification is a typo and not a mis-association.

Equipment Blank: Equipment rinsate blanks associated with sediment cores were submitted separately from the associated field samples; the validator indicated that the results for associated rinse blank EB08-08/21/2022 (results reported in SDG 20283) were not provided to the validators at the time this SDG was validated. The OCDD result in EB08-08/21/2022 is attributable to aqueous prep batch contamination and is not considered to be the result of cross-contamination in the field; no other PCDD/PCDF compounds were detected in EB08-08/21/2022 and no additional qualification is required.

Qualification Modification Table (all results in pg/g)

No additional qualification was required. No reason codes required change except for replacing reason code VJ with EMPC and transferring the laboratory qualifier to the validated_qualifiers field, as described in “General Issues” above.

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	2A
Validation Subcontractor	EcoChem
Laboratory	Cape Fear Analytical (CFA)
SDG	20427
HGL Reviewer	Ken Rapuano 5/23/2023
HGL QC Check by	Deanna Valdebenito (5/25/23)

General issues: The HGL reviewer made several updates to the .txt file in order to format the data validation fields in accordance with database loading requirements. These updates included:

- Ensuring that all target results in field samples and field duplicates reported as EMPCs had a reason code of EMPC, replacing the VJ code used by the validator (in some cases in combination with other qualifiers).
- Moving the validation reason codes from the approval_code column to the dqm_remark column as requested by the database manager.
- Deleting any calculated rows performed on database results that were erroneously included in the export for qualification.
- Copying the lab_qualifiers field to the interpreted_qualifiers field for non-validated results (such as lab QC samples), and converting non-standard flags to standard qualifiers (eg, K into J).
- The HGL reviewer verified that the validated_yn field was populated with Y for all rows.
- The HGL reviewer verified that all 2,3,7,8-TCDF results qualified DNR-EXC had a “reportable_result” field populated with “No”.
- The HGL reviewer verified that results reported from above the calibrated range had the “reportable_result” field populated with “Yes”.

Dioxins/Furans – E1613B

Field Duplicate: The DV report indicates that 2,3,7,8-TCDD did not meet the absolute difference criterion in the SIB-SC-F03-3-4-08/18/2022 and FD-42-08/18/2022 duplicate pair. This analyte met the precision criterion and the HGL reviewer removed the J qualifier and FDPA reason code from the two affected results.

MS/MSD: The validator used reason codes MSLX and MSHX for the OCDD result reported for sample SIB-SC-F03-2-3-08/18/2022. The OCDD concentration in this sample is >4x the concentration spiked into the MS and MSD. The affected result retains the J-MSP qualifier for high MS/MSD RPD, but the MSLX and MSHX qualifiers were removed by the HGL reviewer.

Equipment Blank: Equipment rinsate blanks associated with sediment cores were submitted separately from the associated field samples; the validator indicated that the results for associated rinse blank EB08-08/21/2022 (results reported in SDG 20283) were not provided to the validators at the time this SDG was validated. The OCDD result in EB08-08/21/2022 is attributable to aqueous prep batch contamination and is not considered to be the result of cross-contamination in the field; no other PCDD/PCDF compounds were detected in EB08-08/21/2022 and no additional qualification is required.

Qualification Modification Table (all results in pg/g)

Sample	Analyte	Validated Result	Validated Qualifier	Modified Validated Qualifier	Modified Interpreted Qualifier	Modified Final Reason Code
SIB-SC-F03-2-3-08/18/2022	OCDD	844	J	J	J	MSP
SIB-SC-F03-3-4-08/18/2022	2,3,7,8-TCDD	0.628	J	--	J	EMPC
FD-42-08/18/2022	2,3,7,8-TCDD	ND	J	--	U	--

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	4
Validation Subcontractor	EcoChem
Laboratory	Cape Fear Analytical (CFA)
SDG	20428
HGL Reviewer	Ken Rapuano 5/16/2023
HGL QC Check by	Deanna Valdebenito 5/17/2023

General issues: The HGL reviewer made several updates to the .txt file in order to format the data validation fields in accordance with database loading requirements. These updates included:

- Ensuring that all target results in field samples and field duplicates reported as EMPCs had a reason code of EMPC (replacing the VJ code used by the validator).
- Moving the validation reason codes from the approval_code column to the dqm_remark column as requested by the database manager.
- Adding “Y” to the “validated_yn” field for all data rows in this EDD.
- Deleting calculated rows performed on database results that were erroneously included in the export for qualification.

Dioxins/Furans – E1613B

The DV report did not include the SRM sample in the validation, treating it as a QC sample. The interpreted_qualifiers field was correctly populated for all results for this SRM sample; however, the HGL reviewer added a validation_qualifiers of J and reason code EMPC to the results reported for 1,2,3,7,8,9-HxCDF and 1,2,3,7,8-PeCDD.

The DV report indicated that no field blanks were associated with the samples submitted in this SDG. Equipment rinse blanks associated with sediment cores were submitted separately from the associated field samples and the EBs associated with the field samples in this SDG were not provided to the validators at the time this SDG was validated. In the judgment of the HGL reviewer, rinse blank EB08-08/21/2022 is associated with the samples with results reported in this SDG; PCDD/PCDF results for this EB were reported in CFA SDG 20283. This EB was free from all contamination except OCDD; however, the OCDD result in the rinse blank is attributable to aqueous prep batch contamination and is not considered to be the result of cross-contamination in the field. No additional qualification is required.

Qualification Modification Table (all results in pg/g)

Sample	Analyte	Validated Result	Validated Qualifier	Modified Validated Qualifier	Modified Interpreted Qualifier	Modified Final Reason Code
PSRM0158	1,2,3,7,8,9-HxCDF	0.724	--	J	J	EMPC
	1,2,3,7,8-PeCDD	1.02	--	J	J	EMPC
Varies	Varies	Varies	J	No change to qualifier; changed reason code from VJ to EMPC for 118 results		

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	2A
Validation Subcontractor	EcoChem
Laboratory	Cape Fear Analytical (CFA)
SDG	20429
HGL Reviewer	Ken Rapuano 6/14/2023
HGL QC Check by	Justin Hersh 7/5/2023

General issues: The HGL reviewer made several updates to the EDD file in order to format the data validation fields in accordance with database loading requirements. These updates included:

- Ensuring that all target results in field samples and field duplicates reported as EMPCs had a reason code of EMPC (replacing the VJ code used by the validator).
- Moving the validation reason codes from the approval_code column to the dqm_remark column as requested by the database manager.
- Adding “Y” to the “validated_yn” field for all data rows in this EDD.
- Deleting calculated rows performed on database results that were erroneously included in the export for qualification.
- Ensuring that all “interpreted_qualifier” fields were appropriate for the corresponding “detect_flag” field.

Dioxins/Furans – E1613B

Equipment Blank: Equipment rinsate blanks associated with sediment cores were submitted separately from the associated field samples; the validator indicated that the results for associated rinse blank EB08-08/21/2022 (results reported in SDG 20283) were not provided to the validators at the time this SDG was validated. The OCDD result in EB08-08/21/2022 is attributable to aqueous prep batch contamination and is not considered to be the result of cross-contamination in the field; no other PCDD/PCDF compounds were detected in EB08-08/21/2022 and no additional qualification is required.

Field Duplicates: The DV report qualified the 2,3,7,8-TCDD results J/UJ for field duplicate pair SIB-SC-C09-1-2-08/19/2022 / FD-44-08/19/2022; this pair of results is in control and do not require qualification. The DV report noted that based on a comparison to the results reported for sample SIB-SC-C09-2-3-08/19/2022, it was possible that the parent sample of the field duplicate was mis-assigned. The HGL reviewer confirmed with the field sampling team that the field duplicate association was correct as reported and that the discrepancies represent real non-homogeneity in the sampled interval.

MS/MSD: The validator used the MSLX reason code for OCDF due to the very low %R in the MSD although the native concentration is >4x the spike concentration, the concentration recovered in the MSD is less than ½ the reported native concentration. The HGL reviewer concurs with using the MSLX reason code in this circumstance even though the %R results would normally not be applicable.

Qualification Modification Table (all results in pg/g)

Sample	Analyte	Validated Result	Validated Qualifier	Modified Validated Qualifier	Modified Interpreted Qualifier	Modified Final Reason Code
SIB-SC-C09-1-2-08/19/2022	2,3,7,8-TCDD	0.497	U	--	U	--
FD-44-08/19/2022	2,3,7,8-TCDD	0.971	J	--	J	--

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	2A
Validation Subcontractor	EcoChem
Laboratory	Cape Fear Analytical (CFA)
SDG	20430
HGL Reviewer	Ken Rapuano 6/15/2023
HGL QC Check by	Justin Hersh 7/6/2023

General issues: The HGL reviewer made several updates to the EDD file in order to format the data validation fields in accordance with database loading requirements. These updates included:

- Ensuring that all target results in field samples and field duplicates reported as EMPCs had a reason code of EMPC (replacing the VJ code used by the validator).
- Deleting calculated rows performed on database results that were erroneously included in the export for qualification.
- Ensuring that all “interpreted_qualifier” fields were appropriate for the corresponding “detect_flag” field.
- Confirming the validation reason codes were applied to the dqm_remark column as requested by the database manager.
- Confirming “Y” had been added to the “validated_yn” field for all data rows in this EDD.

Dioxins/Furans – E1613B

Equipment Blank: Equipment rinse blanks associated with sediment cores were submitted separately from the associated field samples; the validator indicated that the results for associated rinse blank EB08-08/21/2022 (results reported in SDG 20283) were not provided to the validators at the time this SDG was validated. The OCDD result in EB08-08/21/2022 is attributable to aqueous prep batch contamination and is not considered to be the result of cross-contamination in the field; no other PCDD/PCDF compounds were detected in EB08-08/21/2022 and no additional qualification is required.

Field Duplicates: The data validators associated field duplicate FD-46-08/19/2022 with sample SIB-SC-I03-3-4-08/19/2022 in accordance with the database output provided to them; however, there is a master spreadsheet of field samples, and that spreadsheet shows this field duplicate associated to sample SIB-SC-I03-2-3-08/19/2022. The field team leader confirmed that the association in the spreadsheet is the correct one. The field duplicate pair showed acceptable precision when the correct association was used. The J qualifiers and FDPA reason codes should be removed from samples SIB-SC-I03-3-4-08/19/2022 and FD-46-08/19/2022.

Qualification Modification Table (all results in pg/g)

Sample	Analyte	Validated Result	Validated Qualifier	Modified Validated Qualifier	Modified Interpreted Qualifier	Modified Final Reason Code
SIB-SC-I03-3-4-08/19/2022	Total HpCDDs	3.32	J	--	J	--
	OCDD	16.3	J	J	J	MSH
	Total HpCDFs	1.31	J	J	J	EMPC
FD-46-08/19/2022	Total HpCDDs	23.2	J	--	--	--
	OCDD	138	J	--	--	--
	Total HpCDFs	12.7	J	--	J	--

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	2A
Validation Subcontractor	EcoChem
Laboratory	Cape Fear Analytical (CFA)
SDG	20431
HGL Reviewer	Ken Rapuano 6/15/2023
HGL QC Check by	Justin Hersh 7/6/2023

General issues: The HGL reviewer made several updates to the EDD file in order to format the data validation fields in accordance with database loading requirements. These updates included:

- Ensuring that all target results in field samples and field duplicates reported as EMPCs had a reason code of EMPC (replacing the VJ code used by the validator).
- Deleting calculated rows performed on database results that were erroneously included in the export for qualification.
- Ensuring that all “interpreted_qualifier” fields were appropriate for the corresponding “detect_flag” field.
- Confirming the validation reason codes were applied to the dqm_remark column as requested by the database manager.
- Confirming “Y” had been added to the “validated_yn” field for all data rows in this EDD.

Dioxins/Furans – E1613B

Equipment Blank: Equipment rinsate blanks associated with sediment cores were submitted separately from the associated field samples; the validator indicated that the results for associated rinse blank EB08-08/21/2022 (results reported in SDG 20283) were not provided to the validators at the time this SDG was validated. The OCDD result in EB08-08/21/2022 is attributable to aqueous prep batch contamination and is not considered to be the result of cross-contamination in the field; no other PCDD/PCDF compounds were detected in EB08-08/21/2022 and no additional qualification is required.

Method Blank: The DV report did not qualify the 1,2,3,4,7,8-HxCDF result for SIB-SC-L09-2-3-08/21/2022. This result is below the qualification threshold and should be qualified U-MBL.

Field Duplicates: The HGL reviewer confirmed that the correct field duplicate/parent sample associations were used.

Qualification Modification Table (all results in pg/g)

Sample	Analyte	Validated Result	Validated Qualifier	Modified Validated Qualifier	Modified Interpreted Qualifier	Modified Final Reason Code
SIB-SC-L09-2-3-08/21/2022	1,2,3,4,7,8-HxCDF	0.178	J	UJ	UJ	EMPC,MBL

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	2A
Validation Subcontractor	EcoChem
Laboratory	Cape Fear Analytical (CFA)
SDG	20432
HGL Reviewer	Ken Rapuano 6/15/2023
HGL QC Check by	Justin Hersh 7/6/2023

General issues: The HGL reviewer made several updates to the EDD file in order to format the data validation fields in accordance with database loading requirements. These updates included:

- Ensuring that all target results in field samples and field duplicates reported as EMPCs had a reason code of EMPC (replacing the VJ code used by the validator).
- Deleting calculated rows performed on database results that were erroneously included in the export for qualification.
- Ensuring that all “interpreted_qualifier” fields were appropriate for the corresponding “detect_flag” field.
- Confirming the validation reason codes were applied to the dqm_remark column as requested by the database manager.
- Confirming “Y” had been added to the “validated_yn” field for all data rows in this EDD.

Dioxins/Furans – E1613B

Equipment Blank: Equipment rinse blanks associated with sediment cores were submitted separately from the associated field samples; the validator indicated that the results for associated rinse blanks EB08-08/21/2022 and EB09-08242022 (results reported in SDG 20283) were not provided to the validators at the time this SDG was validated.

The OCDD result in EB08-08/21/2022 is attributable to aqueous prep batch contamination and is not considered to be the result of cross-contamination in the field; no other PCDD/PCDF compounds were detected in EB08-08/21/2022 and no additional qualification is required. This rinse blank is associated with all samples in this SDG that were collected on 8/21/22.

EB09-08242022 is associated with all samples in this SDG that were collected on 8/22/22. This rinse blank was contaminated with 14 PCDD/PCDFs. The OCDD and 1,2,3,4,6,7,8-HpCDF results are attributable to aqueous prep batch contamination and are not considered to be the result of cross-contamination in the field; however, this equipment blank was contaminated with 12 other PCDD/PCDF analytes. Due to the differences in preparation factors between aqueous and solid samples, the HGL reviewer determined that a concentration reported as X pg/L in the rinse blank corresponds approximately to a relative soil concentration of X/10 pg/g. The contamination in the equipment blank and the corresponding soil action levels are presented in the following table.

Analyte	Aqueous Concentration (pg/L)	Equivalent Soil Concentration (pg/g)	Soil Action Level (pg/g)
1,2,3,7,8-PeCDD	2.36	0.236	1.18

Analyte	Aqueous Concentration (pg/L)	Equivalent Soil Concentration (pg/g)	Soil Action Level (pg/g)
1,2,3,4,7,8-HxCDD	1.58	0.158	0.790
1,2,3,6,7,8-HxCDD	1.58	0.158	0.790
1,2,3,7,8,9-HxCDD	1.84	0.184	0.920
1,2,3,4,6,7,8-HpCDD	1.39	0.139	0.695
1,2,3,7,8-PeCDF	2.78	0.278	1.39
2,3,4,7,8-PeCDF	2.34	0.234	1.17
1,2,3,4,7,8-HxCDF	2.32	0.232	1.16
1,2,3,6,7,8-HxCDF	1.97	0.197	0.985
2,3,4,6,7,8-HxCDF	1.15	0.115	0.575
1,2,3,7,8,9-HxCDF	1.37	0.137	0.685
1,2,3,4,7,8,9-HpCDF	1.37	0.137	0.685

The HGL reviewer qualified the following results U-EBL (note, the number refers to the last digits of the laboratory sample ID):

6. 1,2,3,6,7,8-HxCDD
7. None
8. 1,2,3,7,8-PeCDF and 1,2,3,7,8-PeCDD
9. 1,2,3,7,8-PeCDF
10. None
11. 1,2,3,4,7,8-HxCDD, 1,2,3,7,8-PeCDF, 1,2,3,7,8-PeCDD, and 2,3,4,7,8-PeCDF
12. None
13. 1,2,3,4,7,8-HxCDD and 1,2,3,7,8-PeCDD
14. 1,2,3,7,8-PeCDF
15. None
16. 1,2,3,7,8-PeCDF
17. 1,2,3,7,8-PeCDF and 1,2,3,7,8-PeCDD
18. 1,2,3,7,8-PeCDF
21. None
22. 1,2,3,7,8-PeCDF and 1,2,3,7,8-PeCDD

Method Blank: The DV report did not qualify the 1,2,3,4,7,8-HxCDF result for SIB-SC-L09-2-3-08/21/2022. This result is below the qualification threshold and should be qualified U-MBL.

Field Duplicates: The HGL reviewer confirmed that the correct field duplicate/parent sample associations were used.

Result Quantitation: The HGL reviewer concurs with the validator application of a J-VJ qualifier to the 1,2,3,7,8,9-HxCDF result for sample SIB-SC-R02-5-6-08/22/2022 due to the diphenyl ether interference noted by the laboratory.

Qualification Modification Table (all results in pg/g)

Sample	Analyte	Validated Result	Validated Qualifier	Modified Validated Qualifier	Modified Interpreted Qualifier	Modified Final Reason Code
SIB-SC-R06-1-2-08/22/2022	1,2,3,6,7,8-HxCDD	0.647	J	UJ	UJ	EMPC,EBL

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	2A
Validation Subcontractor	EcoChem
Laboratory	Cape Fear Analytical (CFA)
SDG	20433
HGL Reviewer	Ken Rapuano 5/16/2023
HGL QC Check by	

General issues: The HGL reviewer made several updates to the .txt file in order to format the data validation fields in accordance with database loading requirements. These updates included:

- Ensuring that all target results in field samples and field duplicates reported as EMPCs had a reason code of EMPC (replacing the VJ code used by the validator).
- Moving the validation reason codes from the approval_code column to the dqm_remark column as requested by the database manager.
- Adding “Y” to the “validated_yn” field for all data rows in this EDD.
- Deleting calculated rows performed on database results that were erroneously included in the export for qualification.

Dioxins/Furans – E1613B

SRM Sample: The DV report did not include the SRM sample in the validation, treating it as a QC sample.

- The HGL reviewer added a validation_qualifiers of J and reason code EMPC to the results reported for 1,2,3,4,7,8-HxCDF, 1,2,3,7,8-PeCDF, and 1,2,3,7,8-PeCDD.
- The HGL reviewer qualified the 2,3,4,7,8-PeCDF result UJ-MBL, EMPC and changed the detect_flag field to N.
- The HGL reviewer qualified the 2,3,7,8-TCDF result reported from the DB-5 column (instrument HRP750_2) as EXC-DNR and changed the reportable_result field from Yes to No for the DB-5 column result due to the definitive result being reported from the DB-225 column (instrument HRP757_3).

Equipment Blank: The DV report indicated that no field blanks were associated with the samples submitted in this SDG. Equipment rinsate blanks associated with sediment cores were submitted separately from the associated field samples and the EBs associated with the field samples in this SDG were not provided to the validators at the time this SDG was validated. In the judgment of the HGL reviewer, rinse blank EB09-08/24/2022 is associated with the samples with results reported in this SDG; PCDD/PCDF results for this EB were reported in CFA SDG 20283. The OCDD and 1,2,3,4,6,7,8-HpCDF results in the rinse blank are attributable to aqueous prep batch contamination and are not considered to be the result of cross-contamination in the field; however, this equipment blank was contaminated with 12 other PCDD/PCDF analytes. Due to the differences in preparation factors between aqueous and solid samples, the HGL reviewer determined that a concentration reported as X pg/L in the rinse blank corresponded approximately to a relative soil concentration of X/10 pg/g. The contamination in the equipment blank and the corresponding soil action levels are presented in the following table.

Analyte	Aqueous Concentration (pg/L)	Equivalent Soil Concentration (pg/g)	Soil Action Level (pg/g)
1,2,3,7,8-PeCDD	2.36	0.236	1.18
1,2,3,4,7,8-HxCDD	1.58	0.158	0.790
1,2,3,6,7,8-HxCDD	1.58	0.158	0.790
1,2,3,7,8,9-HxCDD	1.84	0.184	0.920
1,2,3,4,6,7,8-HpCDD	1.39	0.139	0.695
1,2,3,7,8-PeCDF	2.78	0.278	1.39
2,3,4,7,8-PeCDF	2.34	0.234	1.17
1,2,3,4,7,8-HxCDF	2.32	0.232	1.16
1,2,3,6,7,8-HxCDF	1.97	0.197	0.985
2,3,4,6,7,8-HxCDF	1.15	0.115	0.575
1,2,3,7,8,9-HxCDF	1.37	0.137	0.685
1,2,3,4,7,8,9-HpCDF	1.37	0.137	0.685

The HGL reviewer qualified the following results U-EBL (note, the SRM is not affected by field cross-contamination):

1. FD-50-08/22/2022: 1,2,3,7,8-PeCDD, 1,2,3,4,7,8-HxCDD, 1,2,3,7,8-PeCDF, 2,3,4,7,8-PeCDF, 1,2,3,4,7,8-HxCDF, 1,2,3,4,7,8,9-HpCDF
2. SIB-SC-M05-1-2-08/22/2022: 1,2,3,7,8-PeCDD, 1,2,3,7,8-PeCDF
3. SIB-SC-M05-2-3-08/22/2022: 1,2,3,7,8,9-HxCDD, 2,3,4,7,8-PeCDF, 1,2,3,4,7,8-HxCDF
4. SIB-SC-M05-3-4-08/22/2022: 1,2,3,4,6,7,8-HpCDD
5. SIB-SC-M05-4-5-08/22/2022: None
6. SIB-SC-M05-5-6-08/22/2022: None
7. SIB-SC-M04-0-1-08/23/2022: 1,2,3,4,7,8-HxCDD, 1,2,3,7,8-PeCDF, 2,3,4,7,8-PeCDF, 1,2,3,4,7,8-HxCDF, 1,2,3,6,7,8-HxCDF
8. SIB-SC-M04-1-2-08/23/2022: 1,2,3,7,8-PeCDF
9. SIB-SC-M04-2-3-08/23/2022: 1,2,3,7,8-PeCDD, 2,3,4,7,8-PeCDF

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	4
Validation Subcontractor	EcoChem
Laboratory	Cape Fear Analytical (CFA)
SDG	20434
HGL Reviewer	Ken Rapuano 6/15/2023
HGL QC Check by	Justin Hersh 7/6/2023

General issues: The HGL reviewer made several updates to the EDD file in order to format the data validation fields in accordance with database loading requirements. These updates included:

- Ensuring that all target results in field samples and field duplicates reported as EMPCs had a reason code of EMPC (replacing the VJ code used by the validator).
- Deleting calculated rows performed on database results that were erroneously included in the export for qualification.
- Ensuring that all “interpreted_qualifier” fields were appropriate for the corresponding “detect_flag” field.
- Confirming the validation reason codes were applied to the dqm_remark column as requested by the database manager.
- Confirming “Y” had been added to the “validated_yn” field for all data rows in this EDD.

Dioxins/Furans – E1613B

Equipment Blank: EB09-08242022 is associated with all samples in this SDG that were collected on 8/25/22. This rinse blank was contaminated with 14 PCDD/PCDFs. The OCDD and 1,2,3,4,6,7,8-HpCDF results are attributable to aqueous prep batch contamination and are not considered to be the result of cross-contamination in the field; however, this equipment blank was contaminated with 12 other PCDD/PCDF analytes. Due to the differences in preparation factors between aqueous and solid samples, the HGL reviewer determined that a concentration reported as X pg/L in the rinse blank corresponds approximately to a relative soil concentration of X/10 pg/g. The contamination in the equipment blank and the corresponding soil action levels are presented in the following table.

Analyte	Aqueous Concentration (pg/L)	Equivalent Soil Concentration (pg/g)	Soil Action Level (pg/g)
1,2,3,7,8-PeCDD	2.36	0.236	1.18
1,2,3,4,7,8-HxCDD	1.58	0.158	0.790
1,2,3,6,7,8-HxCDD	1.58	0.158	0.790
1,2,3,7,8,9-HxCDD	1.84	0.184	0.920
1,2,3,4,6,7,8-HpCDD	1.39	0.139	0.695
1,2,3,7,8-PeCDF	2.78	0.278	1.39
2,3,4,7,8-PeCDF	2.34	0.234	1.17
1,2,3,4,7,8-HxCDF	2.32	0.232	1.16
1,2,3,6,7,8-HxCDF	1.97	0.197	0.985

Analyte	Aqueous Concentration (pg/L)	Equivalent Soil Concentration (pg/g)	Soil Action Level (pg/g)
2,3,4,6,7,8-HxCDF	1.15	0.115	0.575
1,2,3,7,8,9-HxCDF	1.37	0.137	0.685
1,2,3,4,7,8,9-HpCDF	1.37	0.137	0.685

The HGL reviewer qualified the following results U-EBL (note, the number refers to the last digits of the laboratory sample ID):

1. 1,2,3,4,7,8-HxCDF, 1,2,3,6,7,8-HxCDF, 1,2,3,7,8,9-HxCDD, 2,3,4,6,7,8-HxCDF, and 2,3,4,7,8-PeCDF
2. 1,2,3,4,7,8,9-HpCDF, 1,2,3,4,7,8-HxCDF, 1,2,3,6,7,8-HxCDF, 1,2,3,7,8-PeCDF, and 2,3,4,7,8-PeCDF
3. 1,2,3,4,7,8-HxCDF, 1,2,3,7,8-PeCDF, 1,2,3,7,8-PeCDD, and 2,3,4,7,8-PeCDF
4. 1,2,3,7,8-PeCDF, 1,2,3,7,8-PeCDD, 2,3,4,7,8-PeCDF
5. 1,2,3,7,8-PeCDF
6. 1,2,3,7,8-PeCDF
7. None
8. None
9. None
10. None
11. None
12. 1,2,3,7,8-PeCDF, 1,2,3,7,8-PeCDD, and 2,3,4,7,8-PeCDF
13. 1,2,3,7,8-PeCDF
14. 1,2,3,4,7,8-HxCDF and 2,3,4,7,8-PeCDF
15. 1,2,3,4,7,8,9-HpCDF, 1,2,3,4,7,8-HxCDF, 1,2,3,6,7,8-HxCDF, 1,2,3,7,8-PeCDF, 2,3,4,6,7,8-HxCDF, and 2,3,4,7,8-PeCDF
16. 1,2,3,4,7,8,9-HpCDF, 1,2,3,4,7,8-HxCDF, 1,2,3,6,7,8-HxCDF, 1,2,3,7,8-PeCDD, 2,3,4,6,7,8-HxCDF, and 2,3,4,7,8-PeCDF
17. 1,2,3,4,7,8-HxCDF, 1,2,3,7,8-PeCDF, and 2,3,4,7,8-PeCDF
18. 1,2,3,4,7,8-HxCDF, 1,2,3,7,8-PeCDF, 1,2,3,7,8-PeCDD, and 2,3,4,7,8-PeCDF
19. 1,2,3,4,7,8-HxCDF, 1,2,3,7,8-PeCDF, 1,2,3,7,8-PeCDD, and 2,3,4,7,8-PeCDF

The validator indicated that EB10-09052022 was evaluated and was free from contamination. The OCDD result in this EB is attributable to aqueous prep batch contamination and is not considered to be the result of cross-contamination in the field; no other PCDD/PCDF compounds were detected in EB10-09052022 and no additional qualification is required. This rinse blank is associated with all samples in this SDG that were collected on 9/1/22.

Method Blank: The laboratory extracted all 24 samples in a single preparation batch, but analyzed the extracts in two separate analytical sequences, reanalyzing the same LCS/LCSD and method blank in both sequences. In the judgment of the HGL reviewer, the LCS/LCSD and method blank from each analytical sequence should be associated with the samples analyzed in that sequence. It appears that the validators took this approach and the DV report correctly assigns qualifiers for method blank contamination. However, the MBL reason code was omitted from the 1,2,3,4,6,7,8-HpCDF result reported for sample SIB-SC-N05-4-5-09/01/2022; the HGL reviewer added this reason code to this result.

Qualification Modification Table (all results in pg/g)

Sample	Analyte	Validated Result	Validated Qualifier	Modified Validated Qualifier	Modified Interpreted Qualifier	Modified Final Reason Code

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	2A
Validation Subcontractor	EcoChem
Laboratory	Cape Fear Analytical (CFA)
SDG	20435
HGL Reviewer	Ken Rapuano 6/19/2023
HGL QC Check by	Justin Hersh 7/6/2023

General issues: The HGL reviewer made several updates to the EDD file in order to format the data validation fields in accordance with database loading requirements. These updates included:

- Ensuring that all target results in field samples and field duplicates reported as EMPCs had a reason code of EMPC (replacing the VJ code used by the validator).
- Deleting calculated rows performed on database results that were erroneously included in the export for qualification.
- Ensuring that all “interpreted_qualifier” fields were appropriate for the corresponding “detect_flag” field.
 - For this SDG, this also included adding “J” and “U” qualifiers to the interpreted_qualifiers field for field samples and field duplicates that did not otherwise require a qualifier for a QC discrepancy. It appears that this step was missed by the validators when preparing this EDD for delivery.
- Confirming the validation reason codes were applied to the dqm_remark column as requested by the database manager.
- Confirming “Y” had been added to the “validated_yn” field for all data rows in this EDD.
- Confirming the correct field duplicate association had been made.

Dioxins/Furans – E1613B

Equipment Blank: Rinse blank EB10-09052022 is associated with all samples in this SDG. The validator indicated that EB10-09052022 was evaluated and was free from contamination. The HGL reviewer confirmed that the OCDD result in this EB is attributable to aqueous prep batch contamination and is not considered to be the result of cross-contamination in the field; no other PCDD/PCDF compounds were detected in EB10-09052022 and no additional qualification is required.

Qualification Modification Table (all results in pg/g)

No additional qualification required; however, the HGL reviewer added J and U qualifiers to the interpreted_qualifiers field for all applicable results where the lab_qualifiers field contained a J or a U, respectively.

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	2A
Validation Subcontractor	EcoChem
Laboratory	Cape Fear Analytical (CFA)
SDG	20437
HGL Reviewer	Ken Rapuano 5/17/2023
HGL QC Check by	Deanna Valdebenito 5/18/2023

General issues: The HGL reviewer made several updates to the .txt file in order to format the data validation fields in accordance with database loading requirements. These updates included:

- Ensuring that all target results in field samples and field duplicates reported as EMPCs had a reason code of EMPC, replacing the VJ code used by the validator (in some cases in combination with other qualifiers).
- Moving the validation reason codes from the approval_code column to the dqm_remark column as requested by the database manager.
- Adding “Y” to the “validated_yn” field for all data rows in this EDD.
- Deleting any calculated rows performed on database results that were erroneously included in the export for qualification.
- Copying the lab_qualifiers field to the interpreted_qualifiers field for non-validated results (such as lab QC samples).
- Changing reportable_result from Yes to No and changing detect_flag from N to Y for 2,3,7,8-TCDF results qualified DNR-EXC by the validator (1x 2,3,7,8-TCDF results – all correct in this SDG except for the SRM).
- Changing the reportable_result from No to Yes for results reported with a lab_qualifiers of E (4x OCDD results and 2x total HpCDD results).
- Two results qualified U-MBL were reported as EMPCs and the final qualifier was changed to UJ-EMPC,MBL.

Dioxins/Furans – E1613B

SRM Sample: The DV report did not include the SRM sample in the validation, treating it as a QC sample.

- The HGL reviewer added a validation_qualifiers of J and reason code EMPC to the result reported for 1,2,3,7,8-PeCDD.
- Verified that all reported results were > action level associated with detections in the method blank.
- The 2,3,7,8-TCDF result from instrument HRP750_2 was >LOQ; the HGL reviewer qualified this result EXC-DNR and changed reportable_result to No.

Field Duplicate: The DV report indicated that field duplicate FD-56-09/04/022 could not be evaluated because parent sample SIB-SC-B04-3-4-09042022 was not included in this SDG and the results were not available for review. The HGL reviewer confirmed by a search of the delivered CFA data reports that the results for the parent sample had not been delivered yet and no review was possible at this time. The parent sample was delivered in SDG 20436; all results in this duplicate pair met precision criteria.

Qualification Modification Table (all results in pg/g)

Sample	Analyte	Validated Result	Validated Qualifier	Modified Validated Qualifier	Modified Interpreted Qualifier	Modified Final Reason Code
SIB-SC-B05-2-3-09/04/2022	1,2,3,7,8-PeCDF	0.239	U	UJ	UJ	EMPC,MBL

(1) Reportable_result changed from Yes to No.

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	2A
Validation Subcontractor	EcoChem
Laboratory	Cape Fear Analytical (CFA)
SDG	20451
HGL Reviewer	Ken Rapuano 5/26/2023
HGL QC Review	Justin Hersh 7/7/2023

General issues: The HGL reviewer changed the reason code applied to results reported as EMPCs, replacing the VJ code used by the validator (in some cases in combination with other qualifiers). The HGL reviewer also verified/completed the following formatting items:

- Reason codes were applied to the dqm_remark column instead of the approval_code column, as requested by the database manager.
- Deleting any calculated rows performed on database results that were erroneously included in the export for qualification.
- The HGL reviewer verified that the validated_yn field was populated with Y for all rows.
- The HGL reviewer verified that results reported with a laboratory_qualifiers of E had a reportable_result of Yes.
- The DV report qualified two results reported as EMPCs as U-MBL due to method blank contamination; the HGL reviewer changed the qualifier to UJ-EMPC,MBL.

PCBs as Congeners (Method 1668C)

MS/MSD: The MS/MSD performed on sample SIB-SC-D07-2-3-08/04/2022 showed %R and RPD discrepancies for PCB-105 and PCB-206 and an RPD discrepancy for PCB-118 (%R discrepancies not applicable) but no qualification was applied. For sample SIB-SC-D07-2-3-08/04/2022, the HGL reviewer applied a J-MSLX,MSH,MSP qualifier to the PCB-105 and PCB-206 results and a J-MSP qualifier to the PCB-118 result.

Equipment Blanks: Equipment blank EB05-07262022 (results reported in SDG 20124) is associated with all sediment samples collected on 7.27.22; equipment blank EB06-08042022 (results reported in SDG 20186) is associated with all sediment samples collected on 8.3.22 and 8.4.22. The DV report indicates that these EBs were either not used in qualifying sample results or not available for validator use. Due to the differences in mass extracted, the concentrations reported as pg/L in EBs correspond to the same concentration in pg/g in sediment samples. The following PCB congeners were detected in the EBs (does not include PCB congeners considered to be analytical artifacts based on corresponding detections in the associated aqueous MBs). Note that EB contamination is not adjusted for dilution when comparing to sample results.

EB05-07262022

PCB Congener	Concentration (pg/L)	Soil-equivalent Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-3	3.66	3.66	18.3
PCB-4	12.1	12.1	60.5
PCB-8	12.4	12.4	62.0
PCB-16	5.45	5.45	27.25

PCB Congener	Concentration (pg/L)	Soil-equivalent Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-17	5.38	5.38	26.9
PCB-18/30	12.4	12.4	62.0
PCB-20/28	11.9	11.9	59.5
PCB-21/33	6.41	6.41	32.05
PCB-22	5.47	5.47	27.35
PCB-26/29	3.52	3.52	17.6
PCB-31	12.1	12.1	60.5
PCB-32	3.95	3.95	19.75
PCB-37	3.27	3.27	16.35
PCB-40/71	4.91	4.91	24.55
PCB-44/47/65	12.0	12.0	60.0
PCB-45/51	3.41	3.41	17.05
PCB-49/69	5.65	5.65	28.25
PCB-50/53	2.89	2.89	14.45
PCB-52	13.5	13.5	67.25
PCB-66	5.70	5.70	28.5
PCB-86/87/97/109/119/125	8.95	8.95	44.75
PCB-95	10.3	10.3	51.5
PCB-99	4.13	4.13	20.65
PCB-105	4.44	4.44	22.2
PCB-110/115	11.8	11.8	59.0
PCB-118	8.48	8.48	42.4
PCB-135/151	3.86	3.86	19.3
PCB-147/149	6.55	6.55	32.75
PCB-187	3.72	3.72	18.6

The following results were qualified U-EBL due to contamination in EB05-07262022

- SIB-SC-L03-1-2-07/27/2022: PCB-4, PCB-8, PCB-16, and PCB-18/30
- FD-21-07/27/2022: PCB-4

EB06-08042022

PCB Congener	Concentration (pg/L)	Soil-equivalent Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-4	31.9	31.9	159.5
PCB-6	10.6	10.6	53
PCB-8	37.9	37.9	189.5
PCB-16	11.4	11.4	57
PCB-17	10.5	10.5	52.5

PCB Congener	Concentration (pg/L)	Soil-equivalent Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-18/30	24	24	120
PCB-19	4.68	4.68	23.4
PCB-32	7.78	7.78	38.9
PCB-40/71	4.47	4.47	22.35
PCB-99	5.83	5.83	29.15
PCB-132	3.9	3.9	18.5
PCB-184	3.28	3.28	16.4

The following results were qualified U-EBL due to contamination in EB06-08042022

- SIB-SC-D10-3-4-08/03/2022: PCB-4, PCB-6, and PCB-8
- SIB-SC-D10-4-5-08/03/2022: PCB-4
- SIB-SC-D10-5-6-08/03/2022: PCB-4 and PCB-8
- SIB-SC-D07-2-3-08/04/2022: PCB-4
- SIB-SC-D07-3-4-08/04/2022: PCB-4, PCB-6, PCB-8, and PCB-19
- SIB-SC-D07-4-5-08/04/2022: PCB-4
- SIB-SC-D07-5-6-08/04/2022: PCB-6, PCB-8, and PCB-19

Field Duplicate: The EDD did not have the FDPA reason code applied to the PCB-68 result for sample FD-25-08/04/2022. The HGL reviewer added this qualifier.

Qualification Modification Table (all results in pg/g)

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	2A
Validation Subcontractor	EcoChem
Laboratory	Cape Fear Analytical (CFA)
SDG	20452
HGL Reviewer	Ken Rapuano 5/31/2023
HGL QC Review	Justin Hersh 7/7/2023

General issues: The HGL reviewer changed the reason code applied to results reported as EMPCs, replacing the VJ code used by the validator (in some cases in combination with other qualifiers). The HGL reviewer also verified/completed the following formatting items:

- Reason codes were applied to the dqm_remark column instead of the approval_code column, as requested by the database manager.
- Deleting any calculated rows performed on database results that were erroneously included in the export for qualification.
- The HGL reviewer verified that the validated_yn field was populated with Y for all rows.
- The HGL reviewer verified that results reported with a laboratory_qualifiers of E had a reportable_result of Yes.
- The DV report qualified 24 results reported as EMPCs as U-MBL due to method blank contamination; the HGL reviewer changed the qualifier to UJ-EMPC,MBL.

PCBs as Congeners (Method 1668C)

Method Blanks: The DV report did not apply a U-MBL qualifier to several results for PCB-153/168 that were less than the qualification threshold of 156.5 pg/g. The HGL validator applied U-MBL to the PCB-153/168 results for samples SIB-SC-B10-1-2-08/11/2022, SIB-SC-B10-2-3-08/11/2022, SIB-SC-B10-3-4-08/11/2022, SIB-SC-B10-4-5-08/11/2022, SIB-SC-B10-5-6-08/11/2022, and FD-35-08/11/2022.

Equipment Blanks: Equipment blank EB07-08092022 (results reported in SDG 20186) is associated with all sediment samples collected on 8.9.22 and 8.11.22; equipment blank EB08-08212022 (results reported in SDG 20282) is associated with all sediment samples collected on 8.11.22. The DV report indicates that these EBs were either not used in qualifying sample results or not available for validator use. Due to the differences in mass extracted, the concentrations reported as pg/L in EBs correspond to the same concentration in pg/g in sediment samples. The following PCB congeners were detected in the EBs (does not include PCB congeners considered to be analytical artifacts based on corresponding detections in the associated aqueous MBs). Note that EB contamination is not adjusted for dilution when comparing to sample results.

EB07-08092022

PCB Congener	Concentration (pg/L)	Soil-equivalent Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-4	40.7	40.7	203.5
PCB-8	38.5	38.5	192.5
PCB-15	13.3	13.3	66.5
PCB-16	11.1	11.1	55.5

PCB Congener	Concentration (pg/L)	Soil-equivalent Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-17	11.3	11.3	56.5
PCB-18/30	25.7	25.7	128.5
PCB-25	1.73	1.73	8.65
PCB-32	6.77	6.77	33.85
PCB-35	3.12	3.12	15.6
PCB-40/71	7.38	7.38	36.9
PCB-54	1.85	1.85	9.25
PCB-99	8.01	8.01	40.05

The following results were qualified U-EBL due to contamination in EB07-08092022

- SIB-SC-I04-4-5-08/09/2022: PCB-4
- SIB-SC-I04-5-6-08/09/2022: PCB-4, -8, and 15
- SIB-SC-B10-1-2-08/11/2022: PCB-99
- SIB-SC-B10-2-3-08/11/2022: PCB-18/30 and -99
- SIB-SC-B10-3-4-08/11/2022: PCB-18/30 and -99
- SIB-SC-B10-4-5-08/11/2022: PCB-99
- SIB-SC-B10-5-6-08/11/2022: PCB-99
- FD-35-08/11/2022: PCB-18/30, PCB-32, PCB-54, and PCB-99

EB08-08212022

PCB Congener	Concentration (pg/L)	Soil-equivalent Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-4	31.7	31.7	158.5
PCB-8	43.3	43.3	216.5
PCB-16	16.7	16.7	83.5
PCB-17	11.0	11.0	55.0
PCB-18/30	14.9	14.9	74.5
PCB-19	6.66	6.66	33.3
PCB-27	2.99	2.99	14.95
PCB-32	8.12	8.12	40.6
PCB-35	5.6	5.6	28
PCB-40/71	8.22	8.22	41.1
PCB-42	5.46	5.46	27.3
PCB-48	5.08	5.08	25.4
PCB-84	8.55	8.55	42.75

PCB Congener	Concentration (pg/L)	Soil-equivalent Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-92	6.32	6.32	31.6
PCB-99	12.5	12.5	62.5
PCB-132	4.77	4.77	23.85
PCB-174	2.39	2.39	11.95
PCB-179	1.32	1.32	6.6
PCB-183/185	2.11	2.11	10.55

The following results were qualified U-EBL due to contamination in EB08-08212022

- SIB-SC-G04-1-2-08/16/2022: PCB-4
- SIB-SC-G04-2-3-08/16/2022: PCB-8, and -35
- SIB-SC-G04-3-4-08/16/2022: PCB-4, -8, -16, and -19
- SIB-SC-G04-4-5-08/16/2022: PCB-8, -16, -17, -19, -27, and -32
- SIB-SC-G04-5-6-08/16/2022: PCB-8, -16, -19, -27, and -32

Field Duplicate: The DV report incorrectly indicates that SIB-SC-G04-5-6-08/16/2022 is the parent sample for FD-35-08/11/2022; this appears to be a copy and paste error; the correct field duplicate associated with this sample is FD-39-08/16/2022. The DV report correctly identifies the location of the field duplicate data as SDG 20453. The HGL reviewer confirmed that the duplicate comparison and qualification was performed correctly.

Qualification Modification Table (all results in pg/g)

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	2A
Validation Subcontractor	EcoChem
Laboratory	Cape Fear Analytical (CFA)
SDG	20453
HGL Reviewer	Ken Rapuano 6/19/2023
HGL QC Review	Justin Hersh 7/10/2023

General issues: The HGL reviewer made several updates to the EDD file in order to format the data validation fields in accordance with database loading requirements. These updates included:

- Ensuring that all target results in field samples and field duplicates reported as EMPCs had a reason code of EMPC (replacing the VJ code used by the validator).
- Deleting calculated rows performed on database results that were erroneously included in the export for qualification.
- Ensuring that all “interpreted_qualifier” fields were appropriate for the corresponding “detect_flag” field.
- Confirming the validation reason codes were applied to the dqm_remark column as requested by the database manager.
- Confirming “Y” had been added to the “validated_yn” field for all data rows in this EDD.
- Confirming the correct field duplicate association had been made.
- The DV report qualified 25 results reported as EMPCs as U-MBL due to method blank contamination; the HGL reviewer changed the qualifier to UJ-EMPC,MBL. [This total does not include the additional qualifiers applied to PCB-61 described in “Method Blanks” below.]

PCBs as Congeners (Method 1668C)

Method Blanks: The DV report missed qualifying results for PCB-61 contamination detected in the method blank. The PCB-61 results reported for samples SIB-SC-D06-3-4-08/16/2022, SIB-SC-D06-4-5-08/16/2022, SIB-SC-D06-5-6-08/16/2022, SIB-SC-I03-3-4-08/19/2022, SIB-SC-I03-4-5-08/19/2022, and SIB-SC-I03-5-6-08/19/2022 are below the qualification threshold and the HGL reviewer added U-MBL to these results.

Equipment Blanks: Equipment blank EB08-08/21/2022 (results reported in SDG 20282) is associated with all sediment samples in this SDG. The DV report indicates that these EBs were not used in qualifying sample results. Due to the differences in mass extracted, the concentrations reported as pg/L in EBs correspond to the same concentration in pg/g in sediment samples. The following PCB congeners were detected in the EBs (does not include PCB congeners considered to be analytical artifacts based on corresponding detections in the associated aqueous MBs). Note that EB contamination is not adjusted for dilution when comparing to sample results.

EB08-08212022

PCB Congener	Concentration (pg/L)	Soil-equivalent Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-4	31.7	31.7	158.5
PCB-8	43.3	43.3	216.5

PCB Congener	Concentration (pg/L)	Soil-equivalent Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-16	16.7	16.7	83.5
PCB-17	11.0	11.0	55.0
PCB-18/30	14.9	14.9	74.5
PCB-19	6.66	6.66	33.3
PCB-27	2.99	2.99	14.95
PCB-32	8.12	8.12	40.6
PCB-35	5.6	5.6	28
PCB-40/71	8.22	8.22	41.1
PCB-42	5.46	5.46	27.3
PCB-48	5.08	5.08	25.4
PCB-84	8.55	8.55	42.75
PCB-92	6.32	6.32	31.6
PCB-99	12.5	12.5	62.5
PCB-132	4.77	4.77	23.85
PCB-174	2.39	2.39	11.95
PCB-179	1.32	1.32	6.6
PCB-183/185	2.11	2.11	10.55

The following results were qualified U-EBL due to contamination in EB08-082162022

- FD-39-08/16/2022: PCB-8, -18, -17, -32, -16, and -48
- SIB-SC-D06-1-2-08/16/2022: PCB-8, -18, -17, -32, and -16
- SIB-SC-D06-2-3-08/16/2022: PCB-8, -42, -18, -17, -32, -16, and -40
- SIB-SC-D06-3-4-08/16/2022: PCB-99, -132, -40, -84, and -92
- SIB-SC-D06-4-5-08/16/2022: PCB-99
- SIB-SC-H02-1-2-08/18/2022: PCB-4
- SIB-SC-H02-2-3-08/18/2022: PCB-4
- SIB-SC-H02-3-4-08/18/2022: PCB-4
- SIB-SC-H02-4-5-08/18/2022: PCB-8, -35, -19, -27, -32, and -16
- SIB-SC-H02-5-6-08/18/2022: PCB-8, -18, -17, -19, -32, and -16
- SIB-SC-I03-0-1-08/19/2022: PCB-8, -19, -27, -32, and -16
- SIB-SC-I03-1-2-08/19/2022: PCB-8, -42, -18, -17, -32, -16, -40, and -48
- SIB-SC-I03-2-3-08/19/2022: PCB-18, -18, -17, -35, -19, -27, -32, -16, and -48
- SIB-SC-I03-3-4-08/19/2022: PCB-18, -99, -132, -174, -32, -84, -179, and -183
- SIB-SC-I03-4-5-08/19/2022: PCB-18, -35, -174, and -179
- SIB-SC-I03-5-6-08/19/2022: PCB-18, -17, -99, -174, and -179

Field Duplicate: The DV report for SDG 20454 indicates that the parent sample for field duplicate FD-46-08/19/2022 is sample SIB-SC-I03-3-4-08192022, with results reported in this SDG. The incorrect association was provided to the data validators and the correct parent sample is SIB-SC-I03-2-3-08192022, with results reported in this SDG. The following discrepancies were noted, and the appropriate qualification was applied to sample SIB-SC-I03-2-3-08192022:

- PCB-52, PCB-90/101/113, PCB-92, PCB-95, PCB-99, PCB-110/115, PCB-118, PCB-129/138/163, PCB-132, PCB-135/151, PCB-146, PCB-147/149, PCB-153/168, PCB-174, PCB-180/193, and PCB-187 did not meet the absolute difference criterion and were qualified J-FDPA or UJ-FDPA.

The DV report incorrectly indicates that FD-35-08/11/2022 is the field duplicate for sample SIB-SC-G04-5-6-08/16/2022; this appears to be a copy and paste error and the correct field duplicate associated with this sample is FD-39-08/16/2022. The DV report correctly identifies the location of the parent sample data as SDG 20452. The HGL reviewer confirmed that the duplicate comparison and qualification was performed correctly.

Qualification Modification Table (all results in pg/g)

Sample	Analyte	Validated Result	Validated Qualifier	Modified Validated Qualifier	Modified Interpreted Qualifier	Modified Final Reason Code
FD-39-08/16/2022	PCB-8	13.3	J	UJ	UJ	EMPC,EBL

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	2A
Validation Subcontractor	EcoChem
Laboratory	Cape Fear Analytical (CFA)
SDG	20454
HGL Reviewer	Ken Rapuano 5/26/2023
HGL QC Review	Justin Hersh 7/10/2023

General issues: The HGL reviewer changed the reason code applied to results reported as EMPCs, replacing the VJ code used by the validator (in some cases in combination with other qualifiers). The HGL reviewer also verified/completed the following formatting items:

- Reason codes were applied to the dqm_remark column instead of the approval_code column, as requested by the database manager.
- Deleting any calculated rows performed on database results that were erroneously included in the export for qualification.
- The HGL reviewer verified that the validated_yn field was populated with Y for all rows.
- The HGL reviewer verified that results reported with a laboratory_qualifiers of E had a reportable_result of Yes.
- The DV report qualified 49 results reported as EMPCs as U-MBL due to method blank contamination; the HGL reviewer changed the qualifier to UJ-EMPC,MBL.

PCBs as Congeners (Method 1668C)

Equipment Blanks: Equipment blank EB08-08/21/2022 is associated with all sediment samples collected on 8.19.22 and 8.21.22; equipment blank EB09-08/24/2022 is associated with all sediment samples collected on 8.24.22; results for both EBs are reported in SDG 20282. The DV report indicates that these EBs were not used in qualifying sample results. Due to the differences in mass extracted, the concentrations reported as pg/L in EBs correspond to the same concentration in pg/g in sediment samples. The following PCB congeners were detected in the EBs (does not include PCB congeners considered to be analytical artifacts based on corresponding detections in the associated aqueous MBs). Note that EB contamination is not adjusted for dilution when comparing to sample results.

EB08-08212022

PCB Congener	Concentration (pg/L)	Soil-equivalent Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-4	31.7	31.7	158.5
PCB-8	43.3	43.3	216.5
PCB-16	16.7	16.7	83.5
PCB-17	11.0	11.0	55.0
PCB-18/30	14.9	14.9	74.5
PCB-19	6.66	6.66	33.3
PCB-27	2.99	2.99	14.95
PCB-32	8.12	8.12	40.6

PCB Congener	Concentration (pg/L)	Soil-equivalent Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-35	5.6	5.6	28
PCB-40/71	8.22	8.22	41.1
PCB-42	5.46	5.46	27.3
PCB-48	5.08	5.08	25.4
PCB-84	8.55	8.55	42.75
PCB-92	6.32	6.32	31.6
PCB-99	12.5	12.5	62.5
PCB-132	4.77	4.77	23.85
PCB-174	2.39	2.39	11.95
PCB-179	1.32	1.32	6.6
PCB-183/185	2.11	2.11	10.55

The following results were qualified U-EBL due to contamination in EB08-08212022

- FD-46-08/19/2022: PCB-42, -84, -92, -99, -132, -174, and -183/185
- SIB-SC-J03-3-4-08/19/2022: PCB-8, -16, and -35
- SIB-SC-J03-4-5-08/19/2022: PCB-8, -16, and -35
- SIB-SC-J03-5-6-08/19/2022: PCB-8, -16, -18/30, and -35
- SIB-SC-L07-1-2-08/21/2022: PCB-16 and -27
- SIB-SC-L07-2-3-08/21/2022: PCB-42, -48, -84, -92, and -99
- SIB-SC-L07-3-4-08/21/2022: PCB-42, -84, -92, -99, and 132
- SIB-SC-L07-4-5-08/21/2022: PCB-84, -92, -132, and -183/185
- SIB-SC-L07-5-6-08/21/2022: PCB-84, -92, and -132
- FD-49-08/21/2022: PCB-16; five additional results with EBL added to MBL.

EB09-08242022

PCB Congener	Concentration (pg/L)	Soil-equivalent Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-4	31.2	31.2	156
PCB-8	53.1	53.1	165.5
PCB-15	24.6	24.6	123
PCB-16	16.7	16.7	83.5
PCB-17	13.7	13.7	68.5
PCB-18/30	32.5	32.5	162.5
PCB-19	6.56	6.56	32.8
PCB-25	3.36	3.36	16.8
PCB-32	9.22	9.22	46.1
PCB-35	5.27	5.27	26.35

PCB Congener	Concentration (pg/L)	Soil-equivalent Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-40/71	9.04	9.04	45.2
PCB-42	5.64	5.64	28.2
PCB-48	5.44	5.44	27.2
PCB-99	13.1	13.1	65.5
PCB-132	5.07	5.07	25.35
PCB-174	3.49	3.49	17.45
PCB-179	2.15	2.15	10.75
PCB-183/185	3.82	3.82	19.1
PCB-202	1.93	1.93	9.65

The following results were qualified U-EBL due to contamination in EB09-08242022

- SIB-SC-R06-1-2-08/22/2022: PCB-15, -16, -18/30, and -35; two additional results with EBL added to MBL.
- SIB-SC-R06-2-3-08/22/2022: PCB-15, -16, -17, -18/30, -25, -32, -48; three additional results with EBL added to MBL.
- SIB-SC-R06-3-4-08/22/2022: PCB-4, -8, -15, -16, -18/30, and -35
- SIB-SC-R06-4-5-08/22/2022: PCB-4, -16, and -35
- SIB-SC-R06-5-6-08/22/2022: PCB-4 and -16

Field Duplicate: The DV report indicates that the parent sample for field duplicate FD-46-08/19/2022 is sample SIB-SC-I03-3-4-08192022. The incorrect association was provided to the data validators and the correct parent sample is SIB-SC-I03-2-3-08192022 (results reported in SDG 20453). The following discrepancies were noted:

- PCB-52, PCB-90/101/113, PCB-92, PCB-95, PCB-99, PCB-110/115, PCB-118, PCB-129/138/163, PCB-132, PCB-135/151, PCB-146, PCB-147/149, PCB-153/168, PCB-174, PCB-180/193, and PCB-187 did not meet the absolute difference criterion and were qualified J-FDPA or UJ-FDPA.

Qualification Modification Table (all results in pg/g)

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	2A
Validation Subcontractor	MCGI
Laboratory	Cape Fear Analytical (CFA)
SDG	20455
HGL Reviewer	Ken Rapuano 5.8.23
HGL QC Review	Deanna Valdebenito (5/25/23)

General issues: Note – many of the validation discrepancies identified below are due to the speed with which this validation firm was brought onboard to support this project with limited instruction. As a result, the HGL Project Chemist prepared a Consistency Memorandum and distributed it to all three validation firms in order to provide guidance on validation approaches and instructions on how to complete the EDD for qualifier/reason code upload.

The validator applied all qualifiers in the validation_qualifiers field and did not populate the interpreted_qualifiers field. **The HGL reviewer populated the interpreted_qualifiers field with either the final qualifier for PCB congener results or with the laboratory_qualifiers field for surrogates, calculated values, and QC samples.** The validator also did not apply reason codes. **The HGL reviewer populated the approval_code field with the reason codes applicable to each result.**

The DV report indicated that the U1 qualifier was used to differentiate results qualified as artifacts due to blank contamination from results reported non-detections by the laboratory. This U1 qualifier was applied in the validation_qualifiers; all U1 qualifiers that remained after the HGL revisions described below were retained. **The HGL reviewer applied the standard U qualifier to the interpreted_qualifiers field.**

The validator populated the laboratory_qualifiers field with X for all QC samples; this was approved by the HGL reviewer. The HGL reviewer added the X flag to spiked compounds and surrogates as a convenience in filtering the file.

The HGL reviewer applied Y to the validated_yn field in this SDG.

PCB Congeners – 1668C

Reported Results: In several cases, the qualified EDD did not have the correct entry in the “reportable_result” or “detected” fields.

1. The PCB-95 result for sample SIB-SC-N07-1-2-08242022 was reported from above the calibrated range. The validator correctly qualified the affected result J, although this was misstated as “UJ” in the data validation report. **The PCB-95 result for sample SIB-SC-N07-1-2-08242022 has reason code ACR applied and the reportable_result field from “No” to “Yes”.**
2. The validator applied a J qualifier to all results reported as coeluters. This is not required. **The HGL reviewer removed the J qualifier applied to all coeluting results that are \geq LOQ and not qualified for another reason.**
3. The validator correctly applied a J qualifier to all results reported as EMPCs (results reported with a K in the laboratory_qualifiers field). **The HGL reviewer added “EMPC” to the approval_code field for all EMPCs.**

- The laboratory reported the PCB-176 result for sample SIB-SC-N07-2-3-08/24/2022 qualified KU. The validator applied a UJ qualifier to this result; however, in the judgment of the HGL reviewer, high bias does not affect this non-detected result. **The HGL reviewer changed the PCB-176 result for sample SIB-SC-N07-2-3-08/24/2022 from UJ to J.**

Method Blanks: The validator did not change the detected_yn field from Y to N for results that were qualified U due to blank contamination. **The HGL reviewer changed this field for all results qualified U due to blank contamination, modified as described below.**

- The validator applied the blank qualification guidelines from the NFG instead of the “5x” convention. All target analytes are known contaminants or classes of contaminants at the site and project data is being used to support engineering design for remedial action not site characterization. Also, non-detected project data are being reported as MDL U instead of the CLP convention of PQL U. As the NFG protocols lead to a potential overqualification of data, the older 5x rule will be used for this project. **The HGL reviewer removed the U1 from the laboratory_qualifiers field for all result that were >5x the corresponding blank concentration (adjusted for dilution), regardless of whether the corresponding result was <PQL or ≥PQL. The HGL reviewer removed the J+ qualifier from all results ≥PQL that were ≥5x the corresponding blank concentration. The HGL reviewer added MBL or MBH to the approval_code field for all results qualified U due to method blank contamination.**
- Based on HGL reviewer judgment, two results that were at the upper end of the qualification level calculated using the 5x rule were qualified J instead of U. **The PCB-8 result for sample SIB-SC-J08-4-5-09012022 and the PCB-95 result for sample SIB-SC-N07-2-3-08242022 were qualified J-MBHB by the HGL reviewer.**
- The HGL reviewer changed the qualification of 60 results reported as EMPCs from U-MBL to UJ-EMPC,MBL.**

Equipment Blanks: Equipment blank EB09-08242022 (results reported in SDG 20282) is associated with all sediment samples collected from 8.22.22 through 8.25.22; equipment blank EB10-09052022 (results reported in SDG 20341) is associated with all sediment samples collected from 9.1.22 through 9.5.22. It does not appear as if these EBs were used in qualifying sample results. Due to the differences in mass extracted, the concentrations reported as pg/L in EBs correspond to the same concentration in pg/g in sediment samples. The following PCB congeners were detected in the EBs (does not include PCB congeners considered to be analytical artifacts based on corresponding detections in the associated aqueous MBs). Note that EB contamination is not adjusted for dilution.

EB EB09-08242022

PCB Congener	Concentration (pg/L)	Soil-equivalent Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-4	31.2	31.2	156
PCB-8	53.1	53.1	265.5
PCB-15	24.6	24.6	123
PCB-16	16.7	16.7	83.5
PCB-17	13.7	13.7	68.5
PCB-18/30	32.5	32.5	162.5
PCB-25	3.36	3.36	16.8
PCB-32	9.22	9.22	46.1
PCB-35	5.27	5.27	26.35
PCB-40/71	9.04	9.04	45.2

PCB Congener	Concentration (pg/L)	Soil-equivalent Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-42	5.64	5.64	28.2
PCB-48	5.44	5.44	27.2
PCB-99	13.1	13.1	65.5
PCB-132	5.07	5.07	25.35
PCB-174	3.49	3.49	17.45
PCB-179	2.15	2.15	10.75
PCB-183/185	3.82	3.82	19.1
PCB-202	1.93	1.93	9.65

EB10-09052022

PCB Congener	Concentration (pg/L)	Soil-equivalent Concentration (pg/g)	Qualification Threshold (pg/g)
PCB-9	5.01	5.01	25.05
PCB-15	6.15	6.15	30.75
PCB-49/69	6.97	6.97	34.85
PCB-50/53	4.31	4.31	21.55
PCB-99	3.44	3.44	17.2
PCB-135/151	2.85	2.85	14.25
PCB-147/149	4.09	4.09	20.45
PCB-180/193	2.16	2.16	10.8

MS/MSD: The validation report correctly noted the high MS and MSD %R for PCB-118; however, the validator did not apply a J qualifier to the PCB-118 result in parent sample SIB-SC-R02-3-4-08/22/2022. **The HGL reviewer qualified the PCB-118 result for SIB-SC-R02-3-4-08/22/2022 with J-MSH.**

Field Duplicates: The validator qualified the PCB-8 results J in duplicate pair SIB-SC-B07-0-1-09/05/2022 / FD-58-09/05/2022; the results for this compound were <5x LOQ and had absolute difference <2x LOQ. **No qualification is required and the HGL reviewer removed the J qualifiers.**

Qualification Modification Table (all results in pg/g)

Due to the number of changes, the revisions made by the HGL reviewer that are bolded in this review memo are documented in the green shaded cells in the file 200455_EDD_T_HGL_QCTrack.xlsx and 200455_EDD_T_HGL_EBUpdate.xlsx.

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	2A
Validation Subcontractor	MCGI
Laboratory	Cape Fear Analytical (CFA)
SDG	20465
HGL Reviewer	Ken Rapuano 5.8.23
HGL QC Review	Deanna Valdebenito (5/25/23)

General issues: Note – many of the validation discrepancies identified below are due to the speed with which this validation firm was brought onboard to support this project with limited instruction. As a result, the HGL Project Chemist prepared a Consistency Memorandum and distributed it to all three validation firms in order to provide guidance on validation approaches and instructions on how to complete the EDD for qualifier/reason code upload.

The validator applied all qualifiers in the validation_qualifiers field and did not populate the interpreted_qualifiers field. **The HGL reviewer populated the interpreted_qualifiers field with either the final qualifier for 2,3,7,8-substituted congener results or with the laboratory_qualifiers field for surrogates, calculated values, and QC samples.** The validator also did not apply reason codes. **The HGL reviewer populated the approval_code field with the reason codes applicable to each result.**

The DV report indicated that the U1 qualifier was used to differentiate results qualified as artifacts due to blank contamination from results reported non-detections by the laboratory. This U1 qualifier was applied in the validation_qualifiers; all U1 qualifiers that remained after the HGL revisions described below were retained. **The HGL reviewer applied the standard U qualifier to the interpreted_qualifiers field.**

The validator populated the laboratory_qualifiers field with X for all QC samples; this was approved by the HGL reviewer. The HGL reviewer added the X flag to spiked compounds and surrogates as a convenience in filtering the file.

The HGL reviewer applied Y to the validated_yn field in this SDG.

PCDD/PCDFs – 1613B

Reported Results: In several cases, the qualified EDD did not have the correct entry in the “reportable_result” or “detected” fields.

1. Seven results for OCDD and one result for total HpCDD were reported from above the calibrated range. The validator correctly qualified the affected OCDD results J. **The J-qualified OCDD results reported above the calibrated range should have reason code ACR applied.** The total HpCDD results do not require qualification; however, all 12 results were reported by the laboratory with the reportable_result field populated with “No”. **The reportable_result field for all OCDD and total HpCDD results reported with a laboratory_qualifiers of E should be changed from “No” to “Yes”.**
2. The laboratory reanalyzed 2,3,7,8-TCDF results on the DB-225 column when this analyte was reported >PQL in a sample. When there were two 2,3,7,8-TCDF results reported for a sample, the data validator correctly did not select which of the reported pair of results was the

usable result. The HGL reviewer selected the results reported from the DB-225 column as the usable result and qualified the corresponding result from the DB-5MS column DNR-EXC and changed the “reportable_result” field from “Yes” to “No”. **The 2,3,7,8-TCDF results \geq LOQ reported from the DB-5MS column (results \geq LOQ reported from instrument HRP750_2) should be qualified EXC-DNR and have the “reportable_result” field should be changed from Yes to No.**

3. The validator correctly applied a J qualifier to all results reported as EMPCs (results reported with a K in the laboratory_qualifiers field). **The HGL reviewer added “EMPC” to the approval_code field for all EMPCs.**

Method Blanks: The validator did not change the detected_yn field from Y to N for results that were qualified U due to blank contamination. **The HGL reviewer changed this field for all results qualified U due to blank contamination, modified as described below.**

1. The validator applied the blank qualification guidelines from the NFG instead of the “5x” convention. All target analytes are known contaminants or classes of contaminants at the site and project data is being used to support engineering design for remedial action not site characterization. Also, non-detected project data are being reported as MDL U instead of the CLP convention of PQL U. As the NFG protocols lead to a potential overqualification of data, the older 5x rule will be used for this project. The HGL reviewer removed the U1 from the laboratory_qualifiers field for all result that were $>5x$ the corresponding blank concentration (adjusted for dilution), regardless of whether the corresponding result was $<$ LOQ or \geq LOQ. **The HGL reviewer added MBL to the approval_code field for all results qualified U due to method blank contamination.**
2. The validator applied U qualifiers to non-2,3,7,8-substituted results based on the “B” flag in the laboratory_qualifiers field; however, these results do not require qualification. **The HGL reviewer replaced the validated_qualifiers and interpreted_qualifiers field with the laboratory_qualifiers field contents.**

Qualification Modification Table (all results in pg/g)

Due to the number of changes, the revisions made by the HGL reviewer that are bolded in this review memo are documented in the green shaded cells in the file 200465_EDD_T_HGL_QCTrack.xlsx.

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	2A
Validation Subcontractor	EcoChem
Laboratory	Cape Fear Analytical (CFA)
SDG	20466
HGL Reviewer	Ken Rapuano 5/17/2023
HGL QC Check by	Deanna Valdebenito 5/18/2023

General issues: The HGL reviewer made several updates to the .txt file in order to format the data validation fields in accordance with database loading requirements. These updates included:

- Ensuring that all target results in field samples and field duplicates reported as EMPCs had a reason code of EMPC, replacing the VJ code used by the validator (115x results, in some cases in combination with other qualifiers).
- Moving the validation reason codes from the approval_code column to the dqm_remark column as requested by the database manager.
- Adding “Y” to the “validated_yn” field for all data rows in this EDD.
- Deleting any calculated rows performed on database results that were erroneously included in the export for qualification.
- Copying the lab_qualifiers field to the interpreted_qualifiers field for non-validated results (such as lab QC samples).
- Changing reportable_result from Yes to No and changing detect_flag from N to Y for 2,3,7,8-TCDF results qualified DNR-EXC by the validator (0x 2,3,7,8-TCDF results – all correct in this SDG).
- Changing the reportable_result from No to Yes for results reported with a lab_qualifiers of E (1x OCDD results; appears to be an oversight as others are correct).

Dioxins/Furans – E1613B

SRM Sample: The DV report did not include the SRM sample in the validation, treating it as a QC sample.

- The HGL reviewer added a validation_qualifiers of J and reason code EMPC to the results reported for 1,2,3,7,8-PeCDD, 2,3,4,6,7,8-HxCDF, and 2,3,7,8-TCDD.
- Applied J-LCSP to the OCDD result.
- Verified that all reported results were > action level associated with detections in the method blank.
- Verified that the 2,3,7,8-TCDF result was <LOQ and did not require analysis on the DB-225 column.

Qualification Modification Table (all results in pg/g)

Sample	Analyte	Validated Result	Validated Qualifier	Modified Validated Qualifier	Modified Interpreted Qualifier	Modified Final Reason Code
PSRM0158	1,2,3,7,8-PeCDD	1.25	--	J	J	EMPC

HGL Data Validation Review Report

Project Name/Number	PHSS-SIB PDI / DT2002
Data Validation Stage	2A
Validation Subcontractor	EcoChem
Laboratory	Cape Fear Analytical (CFA)
SDG	20471
HGL Reviewer	Ken Rapuano 5/18/2023
HGL QC Check by	Deanna Valdebenito 5/18/2023

General issues: The HGL reviewer made several updates to the .txt file in order to format the data validation fields in accordance with database loading requirements. These updates included:

- Ensuring that all target results in field samples and field duplicates reported as EMPCs had a reason code of EMPC, replacing the VJ code used by the validator (142x results, in some cases in combination with other qualifiers).
- Moving the validation reason codes from the approval_code column to the dqm_remark column as requested by the database manager.
- Adding “Y” to the “validated_yn” field for all data rows in this EDD.
- Deleting any calculated rows performed on database results that were erroneously included in the export for qualification.
- Copying the lab_qualifiers field to the interpreted_qualifiers field for non-validated results (such as lab QC samples).
- Changing reportable_result from Yes to No and changing detect_flag from N to Y for 2,3,7,8-TCDF results qualified DNR-EXC by the validator (1x 2,3,7,8-TCDF results – all correct in this SDG except for the SRM).
- Changing the reportable_result from No to Yes for results reported with a lab_qualifiers of E (2x OCDD results).

Dioxins/Furans – E1613B

SRM Sample: The DV report did not include the SRM sample in the validation, treating it as a QC sample.

- The HGL reviewer added a validation_qualifiers of J and reason code EMPC to the result reported for 1,2,3,7,8-PeCDF; 1,2,3,7,8-PeCDD, and 2,3,7,8-TCDD.
- Verified that all reported results were > action level associated with detections in the method blank.
- The 2,3,7,8-TCDF result from instrument HRP791_3 was >LOQ; the HGL reviewer qualified this result EXC-DNR and changed reportable_result to No.

Equipment Blank: Equipment rinse blanks associated with sediment cores were submitted separately from the associated field samples; the validator evaluated EB10-09052022 (results reported in SDG 20342 [misidentified as 20432 in the DV report]) but the results for EB09-08/24/2022 (results reported in SDG 20283) were not provided to the validators at the time this SDG was validated. Rinse blank EB09-08/24/2022 is associated with the samples collected on 8.25.22 with results reported in this SDG. The OCDD and 1,2,3,4,6,7,8-HpCDF results in EB09-08/24/2022 are attributable to aqueous prep batch contamination and are not considered to be the result of cross-contamination in the field; however, this equipment blank was contaminated with 12 other PCDD/PCDF analytes. Due to the differences in preparation factors between aqueous and solid samples, the HGL reviewer determined that a concentration reported as X pg/L in the rinse blank corresponded approximately to a relative soil concentration of X/10 pg/g. The contamination in the equipment blank and the corresponding soil action levels are presented in the following table.

Analyte	Aqueous Concentration (pg/L)	Equivalent Soil Concentration (pg/g)	Soil Action Level (pg/g)
1,2,3,7,8-PeCDD	2.36	0.236	1.18
1,2,3,4,7,8-HxCDD	1.58	0.158	0.790
1,2,3,6,7,8-HxCDD	1.58	0.158	0.790
1,2,3,7,8,9-HxCDD	1.84	0.184	0.920
1,2,3,4,6,7,8-HpCDD	1.39	0.139	0.695
1,2,3,7,8-PeCDF	2.78	0.278	1.39
2,3,4,7,8-PeCDF	2.34	0.234	1.17
1,2,3,4,7,8-HxCDF	2.32	0.232	1.16
1,2,3,6,7,8-HxCDF	1.97	0.197	0.985
2,3,4,6,7,8-HxCDF	1.15	0.115	0.575
1,2,3,7,8,9-HxCDF	1.37	0.137	0.685
1,2,3,4,7,8,9-HpCDF	1.37	0.137	0.685

The HGL reviewer qualified the following results U-EBL (note, the SRM is not affected by field cross-contamination):

1. FD-52-08/25/2022: None
2. SIB-SC-D37-1-2-08/25/2022: 1,2,3,7,8-PeCDF
3. SIB-SC-D37-2-3-08/25/2022: 1,2,3,7,8-PeCDF
4. SIB-SC-D37-3-4-08/25/2022: 1,2,3,7,8-PeCDD; 1,2,3,7,8-PeCDF
5. SIB-SC-D37-4-5-08/25/2022: 1,2,3,7,8-PeCDD; 1,2,3,7,8-PeCDF; 1,2,3,7,8,9-HxCDF
6. SIB-SC-D37-5-6-08/25/2022: 1,2,3,6,7,8-HxCDD; 1,2,3,4,7,8-HxCDF; 1,2,3,6,7,8-HxCDF; 2,3,4,6,7,8-HxCDF

Field Duplicate: The header text for the field duplicate comparison incorrectly states that the duplicate pair being evaluated is “SIB-SC-E37-2-3-08252022 & FD-52-08/25/2022”. This is incorrect – the duplicate pair shown in the table is for SIB-SC-F37-1-2-09/03/2022 and FD-54-09/03/2022. The EDD shows the correct associations and qualifiers applied to the correct duplicate pair and no additional qualification is required.

The DV report indicated that field duplicate FD-52-08/25/0222 could not be evaluated because parent sample SIB-SC-E37-2-3-08/25/2022 was not included in this SDG and the results were not available for review. The HGL reviewer confirmed by a search of the delivered CFA data reports that the results for the parent sample had not been delivered yet and no review was possible at this time. No additional qualification is required.

Qualification Modification Table (all results in pg/g)

Sample	Analyte	Validated Result	Validated Qualifier	Modified Validated Qualifier	Modified Interpreted Qualifier	Modified Final Reason Code
SIB-SC-D37-1-2-08/25/2022	1,2,3,7,8-PeCDF	0.839	J	UJ	UJ	EMPC, EBL

GLOSSARY OF ACRONYMS & TERMS

GLOSSARY OF ACRONYMS & TERMS

One or more of the following acronyms and terms may have been used in the descriptive process of the **Organic** Data Validation.

Acronyms:

<i>BFB</i>	Bromofluorobenzene (volatile instrument performance check)
<i>BNA</i>	Base/Neutral/Acid
<i>CCCs</i>	Calibration Check Compounds
<i>CF</i>	Calibration Factor
<i>CLP</i>	Contract Laboratory Program
<i>COC</i>	Chain of Custody
<i>CRDL</i>	Contract Required Detection Limit
<i>CRQL</i>	Contract Required Quantitation Limit
<i>CSF</i>	Complete SDG File
<i>%D</i>	Percent Difference
<i>DCB</i>	Decachlorobiphenyl (Pesticide/PCB/ surrogate compound)
<i>DFTPP</i>	Decafluorotriphenylphosphine (semivolatile instrument performance check)
<i>DSF</i>	Data Summary Form
<i>ECD</i>	Electron-Capture Detector
<i>EICP</i>	Extended Ion Current Profile
<i>EPA</i>	United States Environmental Protection Agency
<i>GC</i>	Gas Chromatography
<i>GC/EC</i>	Gas Chromatography/Electron Capture
<i>GC/MS</i>	Gas Chromatography/Mass Spectra
<i>GPC</i>	Gel Permeation Chromatography (Clean Up)
<i>ICAL</i>	Initial Calibration
<i>IS</i>	Internal Standard
<i>LCS</i>	Laboratory Control Sample
<i>LCL</i>	Lower Control Limit
<i>MCL</i>	Maximum Contamination Level
<i>MDL</i>	Method Detection Limit
<i>MS/MSD</i>	Matrix Spike/Matrix Spike Duplicate
<i>m/z</i>	The ratio of mass (m) to charge (z) of ions measured by GC/MS
<i>OADS</i>	Organic Analysis Data Sheet (Form 1)
<i>ORDA</i>	Organic Regional Data Assessment
<i>PCB</i>	Poly Chlorinated Biphenyl
<i>PEM</i>	Performance Evaluation Mixture

<i>QA/QC</i>	Quality Assurance/Quality Control
<i>QAPjP</i>	Quality Assurance Project Plan
<i>QC</i>	Quality Control
<i>%R</i>	Percent Recovery of spiked amount
<i>RF</i>	Response Factor
<i>RIC</i>	Reconstructed Ion Chromatogram
<i>RPD</i>	Relative Percent Difference
<i>RRF</i>	Relative Response Factor
<i>RSD</i>	Relative Standard Deviation
<i>RT</i>	Retention Time
<i>RTW</i>	Retention Time Window
<i>SDG</i>	Sample Delivery Group
<i>SMC</i>	System Monitoring Compound
<i>SOP</i>	Standard Operation Procedures
<i>SOW</i>	Statement of Work
<i>SPCCs</i>	System Performance Check Compounds
<i>SSL</i>	Samples Shipping Log
<i>SVOA</i>	Semivolatile Organic Analyte
<i>TCL</i>	Target Compound List
<i>TCX</i>	Tetrachloro-m-Xylene (Pesticide/PCB surrogate compound)
<i>TIC</i>	Tentatively Identified Compound
<i>TPH</i>	Total Petroleum Hydrocarbons
<i>UCL</i>	Upper Control Limit
<i>VOA</i>	Volatile Organic Analyte
<i>VTSR</i>	Validated Time of Sample Receipt

Terms:

Associated Samples

Any sample related to a particular QC analysis.

Case

A finite, usually predetermined number of samples collected over a given time period for a particular site. A Case consists of one or more Sample Delivery Group(s).

Contractual Holding Time

The time from VTSR (validated time of sample receipt) to laboratory extraction and /or analysis.

Data Validation Qualifier (DVQ)

This refers to the column on the data summary form in which EPA Region III and other qualifiers have been placed by the data validator.

Data Validation Result (DVR)

This refers to the column on the data summary form used to report results that have been modified by the data validator. A result in the DVR column that is qualified “U” indicates a modification of the reporting limit.

Field Blank Field blanks are intended to identify contaminants that may have been introduced in the field. Examples are rinsate blank (RB), field blanks (FB) and trip blank (TB).

Field Duplicate

A duplicate sample generated in the field; not in the laboratory.

Initial Calibration (ICAL)

The establishment of a calibration curve with the appropriate number of standards and concentration ranges. The calibration curve plots absorbances and/or emissions versus concentration of the standards. .

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

Introduction of a known concentration of a compound into a sample to provide information about the effect of sample matrix on the extraction and/or measurement methodology.

Performance Evaluation Mixture

A standard used to verify that the ICAL sequence is stable throughout the GC or GC/MS analyses.

Sample Delivery Group (SDG)

Defined by one of the following, whichever occurs first:

- case of sample
- each twenty field samples in a case or
- each 14-day calendar period during which field samples in a case are received, beginning with the receipt of the first sample in the SDG.

Technical Holding Time

The time from sample collection to laboratory extraction and /or analysis

GLOSSARY OF ACRONYMS & TERMS

One or more of the following acronyms and terms may have been used in the descriptive process of the **Inorganic** Data Validation.

Acronyms:

<i>AA</i>	Atomic Absorption
<i>CCB</i>	Continuing Calibration Blank
<i>CCV</i>	Continuing Calibration Verification
<i>CF</i>	Calibration Factor
<i>CLP</i>	Contract Laboratory Program
<i>COC</i>	Chain of Custody
<i>CRDL</i>	Contract Required Detection Limit
<i>CSF</i>	Complete SDG File
<i>CV</i>	Cold Vapor
<i>%D</i>	Percent Difference
<i>EPA</i>	United States Environmental Protection Agency
<i>ICAL</i>	Initial Calibration
<i>ICB</i>	Initial Calibration Blank
<i>ICP</i>	Inductively Coupled Plasma
<i>ICS</i>	Interference Check Sample
<i>ICV</i>	Initial Calibration Verification
<i>IDL</i>	Instrument Detection Limit
<i>LCS</i>	Laboratory Control Sample
<i>LCL</i>	Lower Control Limit
<i>MCL</i>	Maximum Contamination Level
<i>MDC</i>	Minimum Detectable Concentration
<i>MDL</i>	Method Detection Limit
<i>MS/MSD</i>	Matrix Spike/Matrix Spike Duplicate
<i>MSA</i>	Method of Standard Addition
<i>PB</i>	Preparation Blank
<i>PCB</i>	Poly Chlorinated Biphenyl
<i>QA/QC</i>	Quality Assurance/Quality Control
<i>QAPjP</i>	Quality Assurance Project Plan
<i>QC</i>	Quality Control

%R	Percent Recovery of spiked amount
RPD	Relative Percent Difference
RRF	Relative Response Factor
RSD	Relative Standard Deviation
SDG	Sample Delivery Group
SOP	Standard Operation Procedures
SOW	Statement of Work
SSL	Samples Shipping Log
TAL	Target Analyte List
UCL	Upper Control Limit
VTSR	Validated Time of Sample Receipt

Terms:

Associated Samples

- Any sample related to a particular QC analysis. For Example:
- For ICV, all samples run under the same calibration curve.
 - For duplicate RPD, all SDG samples digested/distilled of the same matrix.

Case A finite, usually predetermined number of samples collected over a given time period for a particular site. A Case consists of one or more Sample Delivery Group(s).

Continuing Calibration Blank (CCB)

A deionized water sample run every ten (10) samples designed to detect any carryover contamination.

Continuing Calibration Verification (CCV)

A deionized water sample run every ten (10) samples designed to detect any carryover contamination.

Contract Compliance Screening (CCS)

A process in which the SMO inspects the data for contractual compliance and provides EMSL-LV laboratories and the Regions with their findings.

Contractual Holding Time

The time from VTSR (validated time of sample receipt) to laboratory extraction and /or analysis.

Data Validation Qualifier (DVQ)

This refers to the column on the data summary form in which EPA Region III and other qualifiers have been placed by the data validator.

Data Validation Result (DVR)

This refers to the column on the data summary form used to report results that have been modified by the data validator. A result in the DVR column that is qualified “U” indicates a modification of the reporting limit.

Field Blank Field blanks are intended to identify contaminants that may have been introduced in the field. Examples are rinsate blank (RB), field blanks (FB) and trip blank (TB).

Field Duplicate

A duplicate sample generated in the field; not in the laboratory.

Initial Calibration (ICAL)

The establishment of a calibration curve with the appropriate number of standards and concentration ranges. The calibration curve plots absorbancies and/or emissions versus concentration of the standards.

Initial Calibration Blank (ICB)

First blank run after the calibration curve

Initial Calibration Verification (ICV)

First standard run after the calibration curve

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

Introduction of a known concentration of a compound into a sample to provide information about the effect of sample matrix on the extraction and/or measurement methodology.

Post Digestion Spike

The addition of known amount of standard after digestion. (Also identified as analytical spike, or spike, for furnace analyses.)

Preparation Blank (PB)

Blank taken through the digestion process to detect internal laboratory contamination.

Sample Delivery Group (SDG)

Defined by one of the following, whichever occurs first:

- case of sample
- each twenty field samples in a case or
- each 14-day calendar period during which field samples in a case are received, beginning with the receipt of the first sample in the SDG.

Serial Dilution

A sample run at a specific dilution to determine whether any significant chemical or physical interferences exist due to sample matrix effect, for ICP only.

Technical Holding Time

The time from sample collection to laboratory extraction and /or analysis.

COMMUNICATION RECORDS

N/A

GLOSSARY OF DATA VALIDATION QUALIFIERS

GLOSSARY OF DATA QUALIFIER CODES

CODES RELATED TO IDENTIFICATION:

(Confidence concerning presence or absence of compounds)

U	=	Not detected above the level of the associated value. The associated value is either the approximate sample quantitation or detection limit.
NO CODE	=	Confirmed identification
U1	=	Not detected substantially above the level reported in laboratory or field blanks.
R	=	Unusable results. Analyte may or may not be present in the sample.
N	=	Tentative identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.

CODES RELATED TO QUANTITATION:

(Can be used for both positive results and sample quantitation limits)

J	=	Analyte present. Reported value may not be accurate or precise (estimated value).
J+	=	Analyte present. Reported value may be biased high. Result is estimated high.
J-	=	Analyte present. Reported value may be biased low. Result is estimated low.
UJ	=	Not detected. Quantitation limit may be inaccurate or imprecise (Estimated).
UJ-	=	Not detected. Quantitation limit is probably higher.

OTHER CODES:

NJ	=	Qualitative identification questionable. Presumptively present at approximate quantity.
Q	=	No analytical result.
X	=	Data not Validated.

DATE: April 19, 2023

SUBJECT: USEPA Dioxins/Furans & PCBs Congeners Data Validation Report
Lab SDG's No. WO20416, WO20455 & WO20465

Site: Swan Island Basin Project Area
CERCLA Docket No. 10-2021-001
Portland Harbor Superfund Site
Portland, Multnomah County, Oregon
MCGI Project No. HG012301-0416

FROM: Sherif N. Mina
Meridian Consultant Group, Inc.

TO: Ms. Andrea Fletcher
HydroGeoLogic, Inc.

OVERVIEW

This report consists of three (3) Sample Delivery Groups (SDGs) for a total of fifty-eight (58) soil samples submitted to Cape Fear Analytical (CFA), Wilmington, NC, for Dioxins/Furans & PCBs Congeners analyses according to EPA Methods 1613B & 1668C, respectively. Details about each SDG are listed in separate sections below. The samples were analyzed in accordance with the Chain-of-Custody (COC).

Stage-4 data validation was performed on SDG WO20465; and Stage-2A data validation was performed on SDGs WO20416 & WO20455.

The analytical results were validated according to the pertinent parts of U.S. Environmental Protection Agency (USEPA) National Functional Guidelines (NFG) for High Resolution Superfund Methods Data Review, dated November 2020; Guidance for Labeling Externally Validated Laboratory Analytical Data for Superfund Use, dated January 2009; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses.

The qualifications of the data were according to the USEPA NFG; However, the QC criteria listed in the Uniform Federal Policy-Quality Assurance Project Plan (UFP-QAPP), dated May 2022, superseded the QC criteria listed in the USEPA NFG during the data validation.

Deviation from USEPA NFG: The “U” qualifier recommended by USEPA NFG for blank contamination was replaced by the “U1” qualifier to clearly indicate blank contamination on the EDDs.

Stage-2A Data Validation: The following QC’s were reviewed and evaluated:

- Data Completeness & COC.
- Holding Time.
- Sample results.
- Method & Field Blanks.
- Surrogate Recoveries.
- Laboratory & Field Duplicates.
- Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD).
- Matrix Spike/Matrix Spike Duplicate (MS/MSD).

Stage-4 Data validation: All QC’s were reviewed and evaluated as per USEPA NFG.

GENERAL NOTES

- **Electronic Data Deliverable (EDD):** Several rows in the electronic data deliverable (EDD) are marked with an “X” and hidden from the EDDs by the validator. These rows may include quality control samples such as Method Blanks, Laboratory Control Samples, Matrix Spikes, or Matrix Spike Duplicates which are not validated. Additionally, some field sample results may not be used since only one (1) result for each compound is reported after validation. The following list indicates some instances in which an “X” may be placed in the DVQ column:
 1. The compounds in an analysis that have exceeded the instrument calibration range.
 2. All compounds in a diluted analysis that were within the calibration range in the initial analysis.
 3. All compounds in either the initial analysis or re-analysis of a sample, depending on which analysis is not reported on the EDD.Although QC samples and some field samples results may not be used, all data were reviewed and considered in the overall assessment.
- **Data Validation Qualifier (DVQ):** This refers to the column on the data summary form in which EPA and other qualifiers have been placed by the data validator.
- **Data Validation Result (DVR):** This refers to the column on the data summary form used to report results that have been modified by the data validator. A result in the DVR column that is qualified “U” indicates a modification of the reporting limit. Results in the DVR column supersede those reported by the laboratory.
- **Compound Quantitation:** Positive results for compounds which are below the CRQL were qualified as estimated “J” on the EDD.

[1-SDG: WO20465 - Stage-4](#)

This SDG consisted of nineteen (19) soil samples submitted to Cape Fear Analytical (CFA), Wilmington, NC, for Dioxins/Furans analysis according to EPA Method 1613B. No field duplicate pairs were identified in this SDG. The samples were analyzed in accordance with the Chain-of-Custody (COC), see Sample Identification Summary.

Sample Identification Summary

SAMPLE INFORMATION			Analysis
Field ID	Lab ID	Matrix	D
SIB-SC-B32-1-2-07/25/2022	20465001	Soil	x

D=Dioxins/Furans

Field Duplicates: N/A

SUMMARY

All samples were successfully analyzed for all target compounds according to the pertinent parts of U.S. Environmental Protection Agency (USEPA) National Functional Guidelines (NFG) for High Resolution Superfund Methods Data Review, dated November 2020; Guidance for Labeling Externally Validated Laboratory Analytical Data for Superfund Use, dated January 2009; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. All instruments and method sensitivities were according to the specified analytical methods, except as noted in the Major Problem section. Refer to Minor Problems for information regarding biases identified during data validation.

Data Validation Summary

Parameters		D		
		q	t	a
*	Overall Evaluation of Data and Potential Usability Issues		19	0
*	Data Completeness		19	0
*	Preservation and Technical Holding Time		19	0
*	Initial and Continuing Calibrations		19	0
*	Chromatographic Resolution		19	0
*	Labeled Compounds/Surrogates		19	0
	Laboratory and Field Blanks Analyses	x	19	5
*	Matrix Spike/Matrix Spike Duplicate (MS/MSD)		19	0
*	Field Duplicate		19	0
*	Laboratory Control Sample(LCS)		19	0
	Estimated Detection Limit (EDL) & Estimated Maximum Possible Concentration (EMPC)	x	19	19

	Compound Quantitation & Total Homologues	x	19	9

* = All Criteria were met for that Parameter, D=Dioxin/Furan

q=qualified; t=total number of samples analyzed; a=number of samples affected

MAJOR PROBLEMS

- None noted.

MINOR PROBLEMS

- **Blank Contaminants:** The maximum concentration of all compounds found in the analyses of the trip, field or laboratory method blanks are listed in the following table. Associated samples with positive results of these contaminants maybe qualified “U1”, “J” or “J+”, based on the concentration level found in the blanks & the samples, according to USEPA NFG for High Resolution Superfund Methods Data Review, November 2020.

<i>Analytical Fraction</i>	Compound	Maximum Concentration	Units	Blank Type	Associated Samples
<i>Dioxins/Furans</i>	OCDD	1.52	pg/g	Method	All Samples
	1,2,3,4,6,7,8-HpCDF	0.23	pg/g	Method	All Samples

- **Compound Quantitation:** OCDD and/or Heptachlorodibenzo-p-Dioxin exceeded the calibration range in several samples. Positive results for these homologues in the affected samples were qualified “J”.
- **Estimated Maximum Possible Concentration (EMPC):** Several homologues were reported as EMPC in all samples. Positive results for these homologues in the associated samples were qualified “J”.

NOTES

- **Laboratory Control Sample (LCS):** The LCS associated with all samples displayed a slightly low recovery @ 79.3% (<80%) for 1,2,3,7,8-PeCDF. The LCSD & MS/MSD displayed recoveries within the acceptance limits for this homologue. It's the validator's professional judgement not to qualify the data based on this minor LCS recovery.

2-SDG: WO20416 - Stage-2A

This SDG consisted of eighteen (18) soil samples submitted to Cape Fear Analytical (CFA), Wilmington, NC, for Dioxins/Furans analysis according to EPA Method 1613B. One (1) soil field duplicate pair was identified in this SDG. The samples were analyzed in accordance with the Chain-of-Custody (COC), see Sample Identification Summary.

D=Dioxins/Furans

Field Duplicates: FD-20 Duplicate of SIB-SC-H08-1-2

- Field Duplicates:** For the associated field duplicate pair, an RPD of 50% was used as the QC limit for results $\geq 5x$ the PQL; when results (one or both detected values $\leq 5x$ PQL) or when one result is a non-detection, the contr limit is absolute difference $\leq 2x$ PQL (solid matrix). Non-detected values will be assigned the nominal value of the EDL for making this comparison, as per the project QAPP. Qualification based on the field duplicates are only applied to the field duplicate samples. A table summarizing the RPDs for the associated field duplicate pair is provided below.

Compound	FD-20	SIB-SC-H08-1-2	RPD	Qualifier
1,2,3,4,6,7,8-HEPTACHLORODIBENZOFURAN	227	417	59	J
1,2,3,4,6,7,8-HEPTACHLORODIBENZO-P-DIOXIN	1380	2450	56	J
1,2,3,4,7,8,9-HEPTACHLORODIBENZOFURAN	25.3	41.2	48

TETRACHLORINATED DIBENZOFURANS, (TOTAL)	77.9	117	40	
TETRACHLORODIBENZO-P-DIOXIN	23	38.5	**	J
TOTAL HpCDFs	960	1690	55	J

* One or both results values $\leq 5x$ PQL, the absolute difference $\leq 2x$ PQL. No qualification.

** One or both results values $\leq 5x$ PQL, the absolute difference $> 2x$ PQL.

SUMMARY

All samples were successfully analyzed for all target compounds according to the pertinent parts of U.S. Environmental Protection Agency (USEPA) National Functional Guidelines (NFG) for High Resolution Superfund Methods Data Review, dated November 2020; Guidance for Labeling Externally Validated Laboratory Analytical Data for Superfund Use, dated January 2009; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. All instruments and method sensitivities were according to the specified analytical methods, except as noted in the Major Problem section. Refer to Minor Problems for information regarding biases identified during data validation.

MAJOR PROBLEMS

- None noted.

MINOR PROBLEMS

- **Blank Contaminants:** The maximum concentration of all compounds found in the analyses of the trip, field or laboratory method blanks are listed in the following table. Associated samples with positive results of these contaminants maybe qualified “U1”, “J” or “J+”, based on the concentration level found in the blanks & the samples, according to USEPA NFG for High Resolution Superfund Methods Data Review, November 2020.

Analytical Fraction	Compound	Maximum Concentration	Units	Blank Type	Associated Samples
Dioxins/Furans	1,2,3,4,6,7,8-HpCDF	0.512	pg/g	Method	All Samples*
	1,2,3,4,7,8-HxCDF	0.32	pg/g	Method	All Samples*

<i>Analytical Fraction</i>	Compound	Maximum Concentration	Units	Blank Type	Associated Samples
	1,2,3,6,7,8-HxCDF	0.328	pg/g	Method	All Samples*
	1,2,3,7,8-PeCDF	0.26	pg/g	Method	All Samples*
	1,2,3,4,6,7,8,9-OCDD	1.12	pg/g	Method	All Samples*

* This blank is associated with the initial analysis

<i>Analytical Fraction</i>	Compound	Maximum Concentration	Units	Blank Type	Associated Samples
	1,2,3,7,8,9-HxCDD	0.190	pg/g	Method	All Samples**
	1,2,3,4,6,7,8-HpCDD	0.358	pg/g	Method	All Samples**
	1,2,3,4,6,7,8,9-OCDD	1.51	pg/g	Method	All Samples**
	1,2,3,7,8-PeCDF	0.226	pg/g	Method	All Samples**
	2,3,4,7,8-PeCDF	0.158	pg/g	Method	All Samples**
	1,2,3,4,7,8-HxCDF	0.246	pg/g	Method	All Samples**
	1,2,3,6,7,8-HxCDF	0.204	pg/g	Method	All Samples**
	2,3,4,6,7,8-HxCDF	0.184	pg/g	Method	All Samples**
	1,2,3,4,6,7,8-HpCDF	0.654	pg/g	Method	All Samples**
	1,2,3,4,6,7,8,9-OCDF	0.676	pg/g	Method	All Samples**

** This blank is associated with the re-analysis

- **Matrix Spike/Matrix Spike Duplicate (MS/MSD):** The MS/MSD of Sample SIB-SC-H08-2-3 (Lab ID# 20416003) displayed low recoveries and/or RPDs outside the QC limit for 1,2,3,6,7,8-HxCDD, 1,2,3,7,8,9-HxCDD, 2,3,7,8-TCDF, 1,2,3,6,7,8-HpCDD, 1,2,3,4,6,7,8,9-OCDD, 1,2,3,4,6,7,8-HpCDF & 1,2,3,4,6,7,8,9-OCDF. Positive results for these homologues in the parent samples were qualified “J”.
- **Compound Quantitation:** OCDD and/or Heptachlorodibenzo-p-Dioxin exceeded the calibration range in several samples. Positive results for these homologues in the affected samples were qualified “J”.
- **Estimated Maximum Possible Concentration (EMPC):** Several homologues were reported as EMPC in all samples. Positive results for these homologues in the associated samples were qualified “J”.

NOTES

- None noted.

3-SDG: WO20455 - Stage-2A

This SDG consisted of twenty-one (21) soil samples submitted to Cape Fear Analytical (CFA), Wilmington, NC, for PCBs Congeners analysis according to EPA Method 1668C. Two (2) soil field duplicate pairs were identified in this SDG. The samples were analyzed in accordance with the Chain-of-Custody (COC), see Sample Identification Summary.

SUMMARY

All samples were successfully analyzed for all target compounds according to the pertinent parts of U.S. Environmental Protection Agency (USEPA) National Functional Guidelines (NFG) for High Resolution Superfund Methods Data Review, dated November 2020; Guidance for Labeling Externally Validated Laboratory Analytical Data for Superfund Use, dated January 2009; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. All instruments and method sensitivities were according to the specified analytical methods, except as noted in the Major Problem section. Refer to Minor Problems for information regarding biases identified during data validation.

Data Validation Summary

Parameters		D		
		q	t	a
*	Overall Evaluation of Data and Potential Usability Issues		21	0
*	Data Completeness		21	0
*	Preservation and Technical Holding Time		21	0
*	Initial and Continuing Calibrations		21	0
*	Chromatographic Resolution		21	0
*	Labeled Compounds/Surrogates		21	0
	Laboratory and Field Blanks Analyses	x	21	21
	Matrix Spike/Matrix Spike Duplicate (MS/MSD)	x	21	1
	Field Duplicate	x	21	2
*	Laboratory Control Sample(LCS)		21	0
	Estimated Detection Limit (EDL) & Estimated Maximum Possible		21	19
*	Sample Cleanup		21	0
*	Sample Analysis & Identification		21	0
	Compound Quantitation & Total Homologues	x	21	21

* = All Criteria were met for that Parameter, D=Dioxin/Furan

q=qualified; t=total number of samples analyzed; a=number of samples affected

MAJOR PROBLEMS

- None noted.

MINOR PROBLEMS

- **Blank Contaminants:** The maximum concentration of all compounds found in the analyses of the trip, field or laboratory method blanks are listed in the following table. Associated samples with positive results of these contaminants maybe qualified "U1", "J" or "J+", based on the concentration level found in the blanks & the samples, according to USEPA NFG for High Resolution Superfund Methods Data Review, November 2020.

<i>Analytical Fraction</i>	Compound	Maximum Concentration	Units	Blank Type	Associated Samples
<i>PCBs Congeners</i>	2-CHLOROBIPHENYL	5.78	pg/g	Method	All Samples

	Trichlorobiphenyl; 3,3',4-	5.06	pg/g	Method	All Samples
	Trichlorobiphenyl; 3,4,4'-	7.1	pg/g	Method	All Samples

- **Matrix Spike/Matrix Spike Duplicate (MS/MSD):** The MS/MSD of Sample SIB-SC-R02-3-4 (Lab ID# 20455003) displayed high recoveries for 118-PeCB (Pentachlorobiphenyl; 2,3',4,4',5'-). Positive result for this congener in the parent samples was qualified “J”.
- **Compound Quantitation:** Pentachlorobiphenyl; 2,2',3,5',6- exceeded the calibration range in sample SIB-SC-N07-1-2 (20455010), positive result was qualified “UJ”. Also, several congeners were coeluted with other peaks in all samples, positive results & quantitation limits were qualified “J” & “UJ”, respectively.
- **Estimated Maximum Possible Concentration (EMPC):** Several congeners were reported as EMPC in several samples. Positive results for these congeners the associated samples were qualified “J”.

NOTES

- None noted.

REPORT CONTENT STATEMENT

All data for this project were reviewed in accordance with the pertinent parts of the U.S. Environmental Protection Agency (USEPA) National Functional Guidelines (NFG) for High Resolution Superfund Methods Data Review, dated November 2020; Guidance for Labeling Externally Validated Laboratory Analytical Data for Superfund Use, dated January 2009; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. The text of the report addresses only those problems affecting data usability.

ATTACHMENTS

- 1) Glossary of Data Qualifiers
- 2) Electronic Data Deliverable (EDD). These include:
 - (a) All results for target compounds with qualifier codes where applicable.
 - (b) All unusable detection limits (qualified "R"), where applicable.
- 3) Electronic Data Package (.pdf file) as Support Documentation

DCN: HG012301-0416

GLOSSARY OF ACRONYMS & TERMS

GLOSSARY OF ACRONYMS & TERMS

One or more of the following acronyms and terms may have been used in the descriptive process of the **Organic** Data Validation.

Acronyms:

<i>BFB</i>	Bromofluorobenzene (volatile instrument performance check)
<i>BNA</i>	Base/Neutral/Acid
<i>CCCs</i>	Calibration Check Compounds
<i>CF</i>	Calibration Factor
<i>CLP</i>	Contract Laboratory Program
<i>COC</i>	Chain of Custody
<i>CRDL</i>	Contract Required Detection Limit
<i>CRQL</i>	Contract Required Quantitation Limit
<i>CSF</i>	Complete SDG File
<i>%D</i>	Percent Difference
<i>DCB</i>	Decachlorobiphenyl (Pesticide/PCB/ surrogate compound)
<i>DFTPP</i>	Decafluorotriphenylphosphine (semivolatile instrument performance check)
<i>DSF</i>	Data Summary Form
<i>ECD</i>	Electron-Capture Detector
<i>EICP</i>	Extended Ion Current Profile
<i>EPA</i>	United States Environmental Protection Agency
<i>GC</i>	Gas Chromatography
<i>GC/EC</i>	Gas Chromatography/Electron Capture
<i>GC/MS</i>	Gas Chromatography/Mass Spectra
<i>GPC</i>	Gel Permeation Chromatography (Clean Up)
<i>ICAL</i>	Initial Calibration
<i>IS</i>	Internal Standard
<i>LCS</i>	Laboratory Control Sample
<i>LCL</i>	Lower Control Limit
<i>MCL</i>	Maximum Contamination Level
<i>MDL</i>	Method Detection Limit
<i>MS/MSD</i>	Matrix Spike/Matrix Spike Duplicate
<i>m/z</i>	The ratio of mass (m) to charge (z) of ions measured by GC/MS
<i>OADS</i>	Organic Analysis Data Sheet (Form 1)
<i>ORDA</i>	Organic Regional Data Assessment
<i>PCB</i>	Poly Chlorinated Biphenyl
<i>PEM</i>	Performance Evaluation Mixture

<i>QA/QC</i>	Quality Assurance/Quality Control
<i>QAPjP</i>	Quality Assurance Project Plan
<i>QC</i>	Quality Control
<i>%R</i>	Percent Recovery of spiked amount
<i>RF</i>	Response Factor
<i>RIC</i>	Reconstructed Ion Chromatogram
<i>RPD</i>	Relative Percent Difference
<i>RRF</i>	Relative Response Factor
<i>RSD</i>	Relative Standard Deviation
<i>RT</i>	Retention Time
<i>RTW</i>	Retention Time Window
<i>SDG</i>	Sample Delivery Group
<i>SMC</i>	System Monitoring Compound
<i>SOP</i>	Standard Operation Procedures
<i>SOW</i>	Statement of Work
<i>SPCCs</i>	System Performance Check Compounds
<i>SSL</i>	Samples Shipping Log
<i>SVOA</i>	Semivolatile Organic Analyte
<i>TCL</i>	Target Compound List
<i>TCX</i>	Tetrachloro-m-Xylene (Pesticide/PCB surrogate compound)
<i>TIC</i>	Tentatively Identified Compound
<i>TPH</i>	Total Petroleum Hydrocarbons
<i>UCL</i>	Upper Control Limit
<i>VOA</i>	Volatile Organic Analyte
<i>VTSR</i>	Validated Time of Sample Receipt

Terms:

Associated Samples

Any sample related to a particular QC analysis.

Case

A finite, usually predetermined number of samples collected over a given time period for a particular site. A Case consists of one or more Sample Delivery Group(s).

Contractual Holding Time

The time from VTSR (validated time of sample receipt) to laboratory extraction and /or analysis.

Data Validation Qualifier (DVQ)

This refers to the column on the data summary form in which EPA Region III and other qualifiers have been placed by the data validator.

Data Validation Result (DVR)

This refers to the column on the data summary form used to report results that have been modified by the data validator. A result in the DVR column that is qualified “U” indicates a modification of the reporting limit.

Field Blank Field blanks are intended to identify contaminants that may have been introduced in the field. Examples are rinsate blank (RB), field blanks (FB) and trip blank (TB).

Field Duplicate

A duplicate sample generated in the field; not in the laboratory.

Initial Calibration (ICAL)

The establishment of a calibration curve with the appropriate number of standards and concentration ranges. The calibration curve plots absorbances and/or emissions versus concentration of the standards. .

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

Introduction of a known concentration of a compound into a sample to provide information about the effect of sample matrix on the extraction and/or measurement methodology.

Performance Evaluation Mixture

A standard used to verify that the ICAL sequence is stable throughout the GC or GC/MS analyses.

Sample Delivery Group (SDG)

Defined by one of the following, whichever occurs first:

- case of sample
- each twenty field samples in a case or
- each 14-day calendar period during which field samples in a case are received, beginning with the receipt of the first sample in the SDG.

Technical Holding Time

The time from sample collection to laboratory extraction and /or analysis

GLOSSARY OF ACRONYMS & TERMS

One or more of the following acronyms and terms may have been used in the descriptive process of the **Inorganic** Data Validation.

Acronyms:

<i>AA</i>	Atomic Absorption
<i>CCB</i>	Continuing Calibration Blank
<i>CCV</i>	Continuing Calibration Verification
<i>CF</i>	Calibration Factor
<i>CLP</i>	Contract Laboratory Program
<i>COC</i>	Chain of Custody
<i>CRDL</i>	Contract Required Detection Limit
<i>CSF</i>	Complete SDG File
<i>CV</i>	Cold Vapor
<i>%D</i>	Percent Difference
<i>EPA</i>	United States Environmental Protection Agency
<i>ICAL</i>	Initial Calibration
<i>ICB</i>	Initial Calibration Blank
<i>ICP</i>	Inductively Coupled Plasma
<i>ICS</i>	Interference Check Sample
<i>ICV</i>	Initial Calibration Verification
<i>IDL</i>	Instrument Detection Limit
<i>LCS</i>	Laboratory Control Sample
<i>LCL</i>	Lower Control Limit
<i>MCL</i>	Maximum Contamination Level
<i>MDC</i>	Minimum Detectable Concentration
<i>MDL</i>	Method Detection Limit
<i>MS/MSD</i>	Matrix Spike/Matrix Spike Duplicate
<i>MSA</i>	Method of Standard Addition
<i>PB</i>	Preparation Blank
<i>PCB</i>	Poly Chlorinated Biphenyl
<i>QA/QC</i>	Quality Assurance/Quality Control
<i>QAPjP</i>	Quality Assurance Project Plan
<i>QC</i>	Quality Control

%R	Percent Recovery of spiked amount
RPD	Relative Percent Difference
RRF	Relative Response Factor
RSD	Relative Standard Deviation
SDG	Sample Delivery Group
SOP	Standard Operation Procedures
SOW	Statement of Work
SSL	Samples Shipping Log
TAL	Target Analyte List
UCL	Upper Control Limit
VTSR	Validated Time of Sample Receipt

Terms:

Associated Samples

- Any sample related to a particular QC analysis. For Example:
- For ICV, all samples run under the same calibration curve.
 - For duplicate RPD, all SDG samples digested/distilled of the same matrix.

Case A finite, usually predetermined number of samples collected over a given time period for a particular site. A Case consists of one or more Sample Delivery Group(s).

Continuing Calibration Blank (CCB)

A deionized water sample run every ten (10) samples designed to detect any carryover contamination.

Continuing Calibration Verification (CCV)

A deionized water sample run every ten (10) samples designed to detect any carryover contamination.

Contract Compliance Screening (CCS)

A process in which the SMO inspects the data for contractual compliance and provides EMSL-LV laboratories and the Regions with their findings.

Contractual Holding Time

The time from VTSR (validated time of sample receipt) to laboratory extraction and /or analysis.

Data Validation Qualifier (DVQ)

This refers to the column on the data summary form in which EPA Region III and other qualifiers have been placed by the data validator.

Data Validation Result (DVR)

This refers to the column on the data summary form used to report results that have been modified by the data validator. A result in the DVR column that is qualified “U” indicates a modification of the reporting limit.

Field Blank Field blanks are intended to identify contaminants that may have been introduced in the field. Examples are rinsate blank (RB), field blanks (FB) and trip blank (TB).

Field Duplicate

A duplicate sample generated in the field; not in the laboratory.

Initial Calibration (ICAL)

The establishment of a calibration curve with the appropriate number of standards and concentration ranges. The calibration curve plots absorbancies and/or emissions versus concentration of the standards.

Initial Calibration Blank (ICB)

First blank run after the calibration curve

Initial Calibration Verification (ICV)

First standard run after the calibration curve

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

Introduction of a known concentration of a compound into a sample to provide information about the effect of sample matrix on the extraction and/or measurement methodology.

Post Digestion Spike

The addition of known amount of standard after digestion. (Also identified as analytical spike, or spike, for furnace analyses.)

Preparation Blank (PB)

Blank taken through the digestion process to detect internal laboratory contamination.

Sample Delivery Group (SDG)

Defined by one of the following, whichever occurs first:

- case of sample
- each twenty field samples in a case or
- each 14-day calendar period during which field samples in a case are received, beginning with the receipt of the first sample in the SDG.

Serial Dilution

A sample run at a specific dilution to determine whether any significant chemical or physical interferences exist due to sample matrix effect, for ICP only.

Technical Holding Time

The time from sample collection to laboratory extraction and /or analysis.

COMMUNICATION RECORDS

N/A

GLOSSARY OF DATA VALIDATION QUALIFIERS

GLOSSARY OF DATA QUALIFIER CODES

CODES RELATED TO IDENTIFICATION:

(Confidence concerning presence or absence of compounds)

U	=	Not detected above the level of the associated value. The associated value is either the approximate sample quantitation or detection limit.
NO CODE	=	Confirmed identification
U1	=	Not detected substantially above the level reported in laboratory or field blanks.
R	=	Unusable results. Analyte may or may not be present in the sample.
N	=	Tentative identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.

CODES RELATED TO QUANTITATION:

(Can be used for both positive results and sample quantitation limits)

J	=	Analyte present. Reported value may not be accurate or precise (estimated value).
J+	=	Analyte present. Reported value may be biased high. Result is estimated high.
J-	=	Analyte present. Reported value may be biased low. Result is estimated low.
UJ	=	Not detected. Quantitation limit may be inaccurate or imprecise (Estimated).
UJ-	=	Not detected. Quantitation limit is probably higher.

OTHER CODES:

NJ	=	Qualitative identification questionable. Presumptively present at approximate quantity.
Q	=	No analytical result.
X	=	Data not Validated.

DATE: April 19, 2023

SUBJECT: USEPA Dioxins/Furans & PCBs Congeners Data Validation Report
Lab SDG's No. WO20416, WO20455 & WO20465

Site: Swan Island Basin Project Area
CERCLA Docket No. 10-2021-001
Portland Harbor Superfund Site
Portland, Multnomah County, Oregon
MCGI Project No. HG012301-0416

FROM: Sherif N. Mina
Meridian Consultant Group, Inc.

TO: Ms. Andrea Fletcher
HydroGeoLogic, Inc.

OVERVIEW

This report consists of three (3) Sample Delivery Groups (SDGs) for a total of fifty-eight (58) soil samples submitted to Cape Fear Analytical (CFA), Wilmington, NC, for Dioxins/Furans & PCBs Congeners analyses according to EPA Methods 1613B & 1668C, respectively. Details about each SDG are listed in separate sections below. The samples were analyzed in accordance with the Chain-of-Custody (COC).

Stage-4 data validation was performed on SDG WO20465; and Stage-2A data validation was performed on SDGs WO20416 & WO20455.

The analytical results were validated according to the pertinent parts of U.S. Environmental Protection Agency (USEPA) National Functional Guidelines (NFG) for High Resolution Superfund Methods Data Review, dated November 2020; Guidance for Labeling Externally Validated Laboratory Analytical Data for Superfund Use, dated January 2009; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses.

The qualifications of the data were according to the USEPA NFG; However, the QC criteria listed in the Uniform Federal Policy-Quality Assurance Project Plan (UFP-QAPP), dated May 2022, superseded the QC criteria listed in the USEPA NFG during the data validation.

Deviation from USEPA NFG: The “U” qualifier recommended by USEPA NFG for blank contamination was replaced by the “U1” qualifier to clearly indicate blank contamination on the EDDs.

Stage-2A Data Validation: The following QC’s were reviewed and evaluated:

- Data Completeness & COC.
- Holding Time.
- Sample results.
- Method & Field Blanks.
- Surrogate Recoveries.
- Laboratory & Field Duplicates.
- Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD).
- Matrix Spike/Matrix Spike Duplicate (MS/MSD).

Stage-4 Data validation: All QC’s were reviewed and evaluated as per USEPA NFG.

GENERAL NOTES

- **Electronic Data Deliverable (EDD):** Several rows in the electronic data deliverable (EDD) are marked with an “X” and hidden from the EDDs by the validator. These rows may include quality control samples such as Method Blanks, Laboratory Control Samples, Matrix Spikes, or Matrix Spike Duplicates which are not validated. Additionally, some field sample results may not be used since only one (1) result for each compound is reported after validation. The following list indicates some instances in which an “X” may be placed in the DVQ column:
 1. The compounds in an analysis that have exceeded the instrument calibration range.
 2. All compounds in a diluted analysis that were within the calibration range in the initial analysis.
 3. All compounds in either the initial analysis or re-analysis of a sample, depending on which analysis is not reported on the EDD.Although QC samples and some field samples results may not be used, all data were reviewed and considered in the overall assessment.
- **Data Validation Qualifier (DVQ):** This refers to the column on the data summary form in which EPA and other qualifiers have been placed by the data validator.
- **Data Validation Result (DVR):** This refers to the column on the data summary form used to report results that have been modified by the data validator. A result in the DVR column that is qualified “U” indicates a modification of the reporting limit. Results in the DVR column supersede those reported by the laboratory.
- **Compound Quantitation:** Positive results for compounds which are below the CRQL were qualified as estimated “J” on the EDD.

[1-SDG: WO20465 - Stage-4](#)

This SDG consisted of nineteen (19) soil samples submitted to Cape Fear Analytical (CFA), Wilmington, NC, for Dioxins/Furans analysis according to EPA Method 1613B. No field duplicate pairs were identified in this SDG. The samples were analyzed in accordance with the Chain-of-Custody (COC), see Sample Identification Summary.

Sample Identification Summary

D=Dioxins/Furans

Field Duplicates: N/A

SUMMARY

All samples were successfully analyzed for all target compounds according to the pertinent parts of U.S. Environmental Protection Agency (USEPA) National Functional Guidelines (NFG) for High Resolution Superfund Methods Data Review, dated November 2020; Guidance for Labeling Externally Validated Laboratory Analytical Data for Superfund Use, dated January 2009; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. All instruments and method sensitivities were according to the specified analytical methods, except as noted in the Major Problem section. Refer to Minor Problems for information regarding biases identified during data validation.

Data Validation Summary

Parameters		D		
		q	t	a
*	Overall Evaluation of Data and Potential Usability Issues		19	0
*	Data Completeness		19	0
*	Preservation and Technical Holding Time		19	0
*	Initial and Continuing Calibrations		19	0
*	Chromatographic Resolution		19	0
*	Labeled Compounds/Surrogates		19	0
	Laboratory and Field Blanks Analyses	x	19	5
*	Matrix Spike/Matrix Spike Duplicate (MS/MSD)		19	0
*	Field Duplicate		19	0
*	Laboratory Control Sample(LCS)		19	0
	Estimated Detection Limit (EDL) & Estimated Maximum Possible Concentration (EMPC)	x	19	19
*	Sample Cleanup		19	0
*	Sample Analysis & Identification		19	0
	Compound Quantitation & Total Homologues	x	19	9

* = All Criteria were met for that Parameter, D=Dioxin/Furan

q=qualified; t=total number of samples analyzed; a=number of samples affected

MAJOR PROBLEMS

- None noted.

MINOR PROBLEMS

- **Blank Contaminants:** The maximum concentration of all compounds found in the analyses of the trip, field or laboratory method blanks are listed in the following table. Associated samples with positive results of these contaminants maybe qualified “U1”, “J” or “J+”, based on the concentration level found in the blanks & the samples, according to USEPA NFG for High Resolution Superfund Methods Data Review, November 2020.

<i>Analytical Fraction</i>	Compound	Maximum Concentration	Units	Blank Type	Associated Samples
<i>Dioxins/Furans</i>	OCDD	1.52	pg/g	Method	All Samples
	1,2,3,4,6,7,8-HpCDF	0.23	pg/g	Method	All Samples

- **Compound Quantitation:** OCDD and/or Heptachlorodibenzo-p-Dioxin exceeded the calibration range in several samples. Positive results for these homologues in the affected samples were qualified “J”.
- **Estimated Maximum Possible Concentration (EMPC):** Several homologues were reported as EMPC in all samples. Positive results for these homologues in the associated samples were qualified “J”.

NOTES

- **Laboratory Control Sample (LCS):** The LCS associated with all samples displayed a slightly low recovery @ 79.3% (<80%) for 1,2,3,7,8-PeCDF. The LCSD & MS/MSD displayed recoveries within the acceptance limits for this homologue. It's the validator's professional judgement not to qualify the data based on this minor LCS recovery.

2-SDG: WO20416 - Stage-2A

This SDG consisted of eighteen (18) soil samples submitted to Cape Fear Analytical (CFA), Wilmington, NC, for Dioxins/Furans analysis according to EPA Method 1613B. One (1) soil field duplicate pair was identified in this SDG. The samples were analyzed in accordance with the Chain-of-Custody (COC), see Sample Identification Summary.

Sample Identification Summary

D=Dioxins/Furans

Field Duplicates: FD-20 Duplicate of SIB-SC-H08-1-2

- Field Duplicates:** For the associated field duplicate pair, an RPD of 50% was used as the QC limit for results $\geq 5x$ the PQL; when results (one or both detected values $\leq 5x$ PQL) or when one result is a non-detection, the contr limit is absolute difference $\leq 2x$ PQL (solid matrix). Non-detected values will be assigned the nominal value of the EDL for making this comparison, as per the project QAPP. Qualification based on the field duplicates are only applied to the field duplicate samples. A table summarizing the RPDs for the associated field duplicate pair is provided below.

Compound	FD-20	SIB-SC-H08-1-2	RPD	Qualifier
1,2,3,4,6,7,8-HEPTACHLORODIBENZOFURAN	227	417	59	J
1,2,3,4,6,7,8-HEPTACHLORODIBENZO-P-DIOXIN	1380	2450	56	J
1,2,3,4,7,8,9-HEPTACHLORODIBENZOFURAN	25.3	41.2	48	
1,2,3,4,7,8-HEXACHLORODIBENZOFURAN	17	25.2	*	
1,2,3,4,7,8-HEXACHLORODIBENZO-P-DIOXIN	6.06	11.8	*

* One or both results values $\leq 5x$ PQL, the absolute difference $\leq 2x$ PQL. No qualification.

** One or both results values $\leq 5x$ PQL, the absolute difference $> 2x$ PQL.

SUMMARY

All samples were successfully analyzed for all target compounds according to the pertinent parts of U.S. Environmental Protection Agency (USEPA) National Functional Guidelines (NFG) for High Resolution Superfund Methods Data Review, dated November 2020; Guidance for Labeling Externally Validated Laboratory Analytical Data for Superfund Use, dated January 2009; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. All instruments and method sensitivities were according to the specified analytical methods, except as noted in the Major Problem section. Refer to Minor Problems for information regarding biases identified during data validation.

Data Validation Summary

Parameters		D		
		q	t	a
*	Overall Evaluation of Data and Potential Usability Issues		18	0
*	Data Completeness		18	0
*	Preservation and Technical Holding Time		18	0
*	Initial and Continuing Calibrations		18	0
*	Chromatographic Resolution		18	0
*	Labeled Compounds/Surrogates		18	0
	Laboratory and Field Blanks Analyses	x	18	16
	Matrix Spike/Matrix Spike Duplicate (MS/MSD)	x	18	1
	Field Duplicate	x	18	2
*	Laboratory Control Sample(LCS)		18	0
	Estimated Detection Limit (EDL) & Estimated Maximum Possible	x	18	18
*	Sample Cleanup		18	0
*	Sample Analysis & Identification		18	0
	Compound Quantitation & Total Homologues	x	18	7

* = All Criteria were met for that Parameter, D=Dioxin/Furan

q=qualified; t=total number of samples analyzed; a=number of samples affected

MAJOR PROBLEMS

- None noted.

MINOR PROBLEMS

- **Blank Contaminants:** The maximum concentration of all compounds found in the analyses of the trip, field or laboratory method blanks are listed in the following table. Associated samples with positive results of these contaminants maybe qualified “U1”, “J” or “J+”, based on the concentration level found in the blanks & the samples, according to USEPA NFG for High Resolution Superfund Methods Data Review, November 2020.

Analytical Fraction	Compound	Maximum Concentration	Units	Blank Type	Associated Samples
Dioxins/Furans	1,2,3,4,6,7,8-HpCDF	0.512	pg/g	Method	All Samples*
	1,2,3,4,7,8-HxCDF	0.32	pg/g	Method	All Samples*

<i>Analytical Fraction</i>	Compound	Maximum Concentration	Units	Blank Type	Associated Samples
	1,2,3,6,7,8-HxCDF	0.328	pg/g	Method	All Samples*
	1,2,3,7,8-PeCDF	0.26	pg/g	Method	All Samples*
	1,2,3,4,6,7,8,9-OCDD	1.12	pg/g	Method	All Samples*

* This blank is associated with the initial analysis

<i>Analytical Fraction</i>	Compound	Maximum Concentration	Units	Blank Type	Associated Samples
	1,2,3,7,8,9-HxCDD	0.190	pg/g	Method	All Samples**
	1,2,3,4,6,7,8-HpCDD	0.358	pg/g	Method	All Samples**
	1,2,3,4,6,7,8,9-OCDD	1.51	pg/g	Method	All Samples**
	1,2,3,7,8-PeCDF	0.226	pg/g	Method	All Samples**
	2,3,4,7,8-PeCDF	0.158	pg/g	Method	All Samples**
	1,2,3,4,7,8-HxCDF	0.246	pg/g	Method	All Samples**
	1,2,3,6,7,8-HxCDF	0.204	pg/g	Method	All Samples**
	2,3,4,6,7,8-HxCDF	0.184	pg/g	Method	All Samples**
	1,2,3,4,6,7,8-HpCDF	0.654	pg/g	Method	All Samples**
	1,2,3,4,6,7,8,9-OCDF	0.676	pg/g	Method	All Samples**

** This blank is associated with the re-analysis

- **Matrix Spike/Matrix Spike Duplicate (MS/MSD):** The MS/MSD of Sample SIB-SC-H08-2-3 (Lab ID# 20416003) displayed low recoveries and/or RPDs outside the QC limit for 1,2,3,6,7,8-HxCDD, 1,2,3,7,8,9-HxCDD, 2,3,7,8-TCDF, 1,2,3,6,7,8-HpCDD, 1,2,3,4,6,7,8,9-OCDD, 1,2,3,4,6,7,8-HpCDF & 1,2,3,4,6,7,8,9-OCDF. Positive results for these homologues in the parent samples were qualified “J”.
- **Compound Quantitation:** OCDD and/or Heptachlorodibenzo-p-Dioxin exceeded the calibration range in several samples. Positive results for these homologues in the affected samples were qualified “J”.
- **Estimated Maximum Possible Concentration (EMPC):** Several homologues were reported as EMPC in all samples. Positive results for these homologues in the associated samples were qualified “J”.

NOTES

- None noted.

3-SDG: WO20455 - Stage-2A

This SDG consisted of twenty-one (21) soil samples submitted to Cape Fear Analytical (CFA), Wilmington, NC, for PCBs Congeners analysis according to EPA Method 1668C. Two (2) soil field duplicate pairs were identified in this SDG. The samples were analyzed in accordance with the Chain-of-Custody (COC), see Sample Identification Summary.

PPCBs Congeners

Field Duplicates: FD-50 Duplicate of SIB-SC-R02-2-3

FD-58 Duplicate of SIB-SC-B07-0-1

- Field Duplicates:** For the associated field duplicate pair, an RPD of 50% was used as the QC limit for results $\geq 5x$ the PQL; when results (one or both detected values $\leq 5x$ PQL) or when one result is a non-detection, the contr limit is absolute difference $\leq 2x$ PQL (solid matrix). Non-detected values will be assigned the nominal value of the EDL for making this comparison, as per the project QAPP. Qualification based on the field duplicates are only applied to the field duplicate samples. A table summarizing the RPDs for the associated field duplicate pair is provided below.

SUMMARY

All samples were successfully analyzed for all target compounds according to the pertinent parts of U.S. Environmental Protection Agency (USEPA) National Functional Guidelines (NFG) for High Resolution Superfund Methods Data Review, dated November 2020; Guidance for Labeling Externally Validated Laboratory Analytical Data for Superfund Use, dated January 2009; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. All instruments and method sensitivities were according to the specified analytical methods, except as noted in the Major Problem section. Refer to Minor Problems for information regarding biases identified during data validation.

Data Validation Summary

* = All Criteria were met for that Parameter, D=Dioxin/Furan

q=qualified; t=total number of samples analyzed; a=number of samples affected

MAJOR PROBLEMS

- None noted.

MINOR PROBLEMS

- **Blank Contaminants:** The maximum concentration of all compounds found in the analyses of the trip, field or laboratory method blanks are listed in the following table. Associated samples with positive results of these contaminants maybe qualified "U1", "J" or "J+", based on the concentration level found in the blanks & the samples, according to USEPA NFG for High Resolution Superfund Methods Data Review, November 2020.

<i>Analytical Fraction</i>	Compound	Maximum Concentration	Units	Blank Type	Associated Samples
<i>PCBs Congeners</i>	2-CHLOROBIPHENYL	5.78	pg/g	Method	All Samples
	4,4'-DICHLOROBIPHENYL	8.5	pg/g	Method	All Samples

	Trichlorobiphenyl; 3,4,4'-	7.1	pg/g	Method	All Samples

- **Matrix Spike/Matrix Spike Duplicate (MS/MSD):** The MS/MSD of Sample SIB-SC-R02-3-4 (Lab ID# 20455003) displayed high recoveries for 118-PeCB (Pentachlorobiphenyl; 2,3',4,4',5'-). Positive result for this congener in the parent samples was qualified “J”.
- **Compound Quantitation:** Pentachlorobiphenyl; 2,2',3,5',6- exceeded the calibration range in sample SIB-SC-N07-1-2 (20455010), positive result was qualified “UJ”. Also, several congeners were coeluted with other peaks in all samples, positive results & quantitation limits were qualified “J” & “UJ”, respectively.
- **Estimated Maximum Possible Concentration (EMPC):** Several congeners were reported as EMPC in several samples. Positive results for these congeners the associated samples were qualified “J”.

NOTES

- None noted.

REPORT CONTENT STATEMENT

All data for this project were reviewed in accordance with the pertinent parts of the U.S. Environmental Protection Agency (USEPA) National Functional Guidelines (NFG) for High Resolution Superfund Methods Data Review, dated November 2020; Guidance for Labeling Externally Validated Laboratory Analytical Data for Superfund Use, dated January 2009; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. The text of the report addresses only those problems affecting data usability.

ATTACHMENTS

- 1) Glossary of Data Qualifiers
- 2) Electronic Data Deliverable (EDD). These include:
 - (a) All results for target compounds with qualifier codes where applicable.
 - (b) All unusable detection limits (qualified "R"), where applicable.
- 3) Electronic Data Package (.pdf file) as Support Documentation
