PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of compliance review (EPA Stage 2A) performed on sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Dioxins/Furans	E1613B	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, November 2020).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

Dioxin/Furan Compounds by EPA 1613B

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory and field quality control (QC) samples. All data received a compliance screening level of review (EPA Stage 2A). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES AND MATRIX	VALIDATION LEVEL
19980	36 Sediment	Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	1	Certified Reference Material
2	Laboratory Blanks	1	Field Duplicates
1	Field Blanks	✓	Target Analyte List
✓	Labeled Compound Recovery	✓	Reporting Limits
2	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	2	Compound Identification
✓	Laboratory Control Samples (LCS/LCSD)	2	Compound Quantitation

✓ Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

The validation guidance documents state that the cooler temperatures should be within an advisory temperature range of 2° to 6°C. The laboratory received the sample coolers within the advisory temperature range.

Sample SIB-SC-C33-2-3-07/07/2022 has a collection time of 10:36 on the chain-of-custody (COC) but was logged in with a time of 10:33. No action was taken.

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned K-flags to values when a peak was detected but did not meet identification criteria. These values are considered positive identifications which are "estimated maximum possible concentrations" or EMPC. When these occurred in the method blank the results were evaluated as positive results. When these occurred in the associated samples, any EMPC values that were less than the method blank action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. Various target analytes were detected in the method blanks, however only the following analytes required qualification in one or more samples:

Extraction Batch 50409:

CLIENT ID	ANALYTE	QUALIFIER
SIB-SC-B13-1-2-07/05/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
	1,2,3,4,7,8-HxCDF	U-MBL

	2,3,4,7,8-PeCDF	U-MBL
SIB-SC-D33-2-3-07/07/2022	1,2,3,7,8-PeCDF	U-MBL
SIB-SC-D33-3-4-07/07/2022	1,2,3,7,8-PeCDF	U-MBL
	1,2,3,7,8-PeCDD	U-MBL

Field Blanks

No field blank samples were submitted with this SDG.

Matrix Spike/Matrix Spike Duplicate

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. Precision is evaluated using the relative percent difference (RPD) values calculated between the MS and MSD results. When the MS/MSD %R values indicate a potential low bias, associated results are estimated (J/UJ-MSL). Only the associated positive results are estimated (J-MSH) if the %R values indicate a potential high bias. Associated positive results are estimated (J-MSP) if the RPD values indicate uncertainty. No qualifiers are assigned for %R value outliers if the parent concentration is greater than 4x the spike concentration. Qualifiers are only issued to the parent sample.

For Extraction Batch 50416, MS/MSD analyses were performed using Sample SIB-SC-C23-2-3-07/06/2022. The following qualifiers were assigned:

ANALYTE	MS %R	MSD %R	RPD	QUALIFIER
1,2,3,4,6,7,8-HpCDD	178	428	57.5	J-MSH,MSP
1,2,3,4,6,7,8-HpCDF	OK	173	33.8	J-MSH,MSP
OCDF	OK	212	45.7	J-MSH,MSP
OCDD	Parent conc > 4x spike		69.4	J-MSP

Certified Reference Material

No certified reference materials were analyzed.

Field Duplicates

For sediment samples, the RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL.

One set of field replicates, SIB-SC-E26-3-4-07/06/2022 & FD-01-07/06/2022, was submitted. Field precision was acceptable.

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF positive results when using the DB5 GC column for analysis. The DB5 column cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. Although the laboratory used a DB-5MS column which more adequately separates TCDF isomers, the laboratory still performed a second column confirmation on a DB-225 column when 2,3,7,8-TCDF was detected, and the concentration was greater than the reporting limit. Both sets of results were reported. The 2,3,7,8-TCDF results from the DB-5MS column were qualified do-not-report (DNR-EXC) in favor of the results from the DB-225 column.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. These results were K-flagged by the laboratory. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were qualified (J-VJ).

Compound Quantitation

The laboratory flagged sample results with an "E" flag indicating the sample results exceeded the calibrated linear range of the instrument. These results were estimated (J-ACR).

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. With the exceptions noted above, accuracy was acceptable, as demonstrated by the labeled compound, LCS/LCSD, and MS/MSD recoveries. Precision was also acceptable as indicated by the LCS/LCSD, MS/MSD, and field duplicate sample RPD values.

Data were qualified as not detected due to method blank contamination. Data were estimated to indicate that EMPC values are estimated maximum possible concentrations. Other data were estimated due to MS/MSD accuracy and precision outliers as well as calibration range exceedances.

Data were flagged as do-not-report (DNR) to indicate which result (from multiple reported analyses) should not be used. Data that have been flagged DNR should not be used for any purpose.

All other data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r^2 below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

QC Element	Reason Code	Definition
Low-Level Calibration Check	LLCH	Low-level calibration check above the upper limit
Low-Level Calibration Check	LLCL	Low-level calibration check below the lower limit
Low-Level Calibration Check	LLXL	Low-level calibration check below the lower limit, extreme discrepancy
Method Blank	MBH	Method blank result \geq LOQ
Method Blank	MBHB	Result is judged to be biased high based on associated method blank result
Method Blank	MBL	Method blank result $<$ LOQ
Matrix Spike	MSH	MS and/or MSD %R above acceptance criterion
Matrix Spike	MSL	MS and/or MSD %R below acceptance criterion
Matrix Spike	MSLX	MS and/or MSD %R below acceptance criterion, extreme discrepancy
Matrix Spike	MSP	MS/MSD RPD above acceptance criterion
Post-Digestion Spike	PDH	Post-digestion spike recovery high
Post-Digestion Spike	PDL	Post-digestion spike recovery low
Post-Digestion Spike	PDLX	Post-digestion spike recovery low, extreme discrepancy
Post-Digestion Spike	PDN	Post-digestion spike not performed or not applicable and serial dilution result not performed or not applicable
Sample Delivery and Condition	BUB	Bubbles $>$ 5 millimeters in volatile organic compounds vial
Sample Delivery and Condition	DAM	Sample container damaged
Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor

DATA VALIDATION REPORT

HGL – SWAN ISLAND BASIN

Prepared for:

HydroGeoLogic, Inc
11107 Sunset Hills Rd. Suite 400
Reston, VA 20190

Prepared by:

EcoChem, Inc.
500 Union Street, Suite 1010
Seattle, WA 98101

EcoChem Project: C28601-1

SDG: 20005

August 3, 2023

Approved for Release:

A handwritten signature in black ink, appearing to read "Michela Hernandez". The signature is written in a cursive style and is positioned above a horizontal line.

Michela Hernandez
Senior Project Chemist
EcoChem, Inc.

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of full review (EPA Stage 4) performed on sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Dioxins/Furans	E1613B	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, April 2020).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

Dioxin/Furan Compounds by EPA 1613B

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory and field quality control (QC) samples. All data received a full level of review (EPA Stage 4). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES AND MATRIX	VALIDATION LEVEL
20005	24 Sediment	Stage 4

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

For Method Blank 12032284 (extracted 7/18/22) and Method Blank 12032294, the EDD did not match the PDF. The laboratory submitted a revised EDD. The results for all native target analytes matched the PDF. The EDD results for Total PeCDF, Total HxCDF, and Total HpCDF did not match the results reported in the PDF. Total dioxins/furans are not evaluated for method blanks; therefore, no further action was taken. The correct results were noted in the “remark” field in the EDD.

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	✓	Laboratory Control Samples (LCS/LCSD)
✓	System Performance and Resolution Checks	1	Certified Reference Material
✓	Initial Calibration (ICAL)	2	Field Duplicates
✓	Calibration Verification (CCAL)	✓	Target Analyte List
2	Laboratory Blanks	✓	Reporting Limits
1	Field Blanks	2	Compound Identification
✓	Labeled Compound Recovery	✓	Compound Quantitation
2	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	1	Calculation Verification

✓ *Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.*

1 *Quality control results are discussed below, but no data were qualified.*

2 *Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.*

Sample Receipt, Preservation, and Holding Times

Sample identification (ID) date suffices were missing the "/" in the EDD as noted on the chains-of-custody (COC).

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned K-flags to values when a peak was detected but did not meet identification criteria. These values are considered positive identifications which are "estimated maximum possible concentrations" or EMPC. When these occurred in the method blank the results were evaluated as positive results. When these occurred in the associated samples, any EMPC values that were less than the method blank action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. Various target analytes were detected in the method blanks, however only the following analytes required qualification in one or more samples:

Extraction Batch 50428: The following field sample results were qualified as not detected:

CLIENT ID	ANALYTE	QUALIFIER
SIB-SC-B35-1-2-07/07/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
SIB-SC-B35-2-3-07/07/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
SIB-SC-B35-2-3-07/07/2022	OCDD	U-MBL
SIB-SC-B35-3-4-07/07/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
SIB-SC-B35-3-4-07/07/2022	OCDD	U-MBL
SIB-SC-B35-4-5-07/07/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
SIB-SC-B35-4-5-07/07/2022	OCDD	U-MBL
FD-03-07/07/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
SIB-SC-B35-5-6-07/07/2022	1,2,3,4,6,7,8-HpCDF	U-MBL

Field Blanks

No field blank samples were submitted with this SDG.

Matrix Spike/Matrix Spike Duplicate

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. Precision is evaluated using the relative percent difference (RPD) values calculated between the MS and MSD results. When the MS/MSD %R values indicate a potential low bias, associated results are estimated (J/UJ-MSL). Only the associated positive results are estimated (J-MSH) if the %R values indicate a potential high bias. Associated positive results are estimated (J-MSP) if the RPD values indicate uncertainty. No qualifiers are assigned for %R value outliers if the parent concentration is greater than 4x the spike concentration. Qualifiers are only issued to the parent sample.

The MS/MSD analyses were performed using Sample SIB-SC-C34-0-1-07/07/2022. The following qualifiers were assigned:

ANALYTE	MS %R	MSD %R	RPD	QUALIFIER
1,2,3,4,6,7,8-HpCDD	277	335	--	J-MSH
OCDD	1430	1960	26.4	J-MSH,MSP
1,2,3,4,6,7,8-HpCDF	--	146	--	J-MSH
OCDF	149	157	--	J-MSH

The MS/MSD analyses were performed using Sample SIB-SC-E35-3-4-07/08/2022. The following qualifiers were assigned:

ANALYTE	MS %R	MSD %R	RPD	QUALIFIER
1,2,3,4,6,7,8-HpCDD	Parent > 4x Spike		31.1	J-MSP
OCDD	Parent > 4x Spike		35.6	J-MSP
1,2,3,4,6,7,8-HpCDF	68.3	--	--	J-MSL
OCDF	49.5	--	--	J-MSL

Certified Reference Material

No certified reference materials were analyzed.

Field Duplicates

For sediment samples, the RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL.

Three sets of field duplicates were submitted. With the following exceptions, field precision was acceptable.

SIB-SC-C34-3-4-07072022 and FD-02-07072022
 SIB-SC-B35-4-5-07072022 and FD-03-07072022
 SIB-SC-E35-2-3-07082022 and FD-04-07082022

For set, SIB-SC-C34-3-4-07072022 and FD-02-07072022:

ANALYTE	OUTLIER	QUALIFIER
1,2,3,4,6,7,8-HpCDF	Difference	J-FDPA
1,2,3,4,6,7,8-HpCDD	RPD	J-FDPR
1,2,3,6,7,8-HxCDD	Difference	J-FDPA
1,2,3,7,8,9-HxCDD	Difference	J-FDPA
2,3,7,8-TCDF	Difference	J-FDPA
2,3,7,8-TCDD	Difference	J-FDPA
OCDF	Difference	J-FDPA

OCDD	RPD	J-FDPR
Total HpCDD	RPD	J-FDPR
Total HxCDF	Difference	J-FDPA
Total HxCDD	RPD	J-FDPR
Total PeCDF	Difference	J-FDPA
Total PeCDD	Difference	J-FDPA
Total TCDF	RPD	J-FDPR
Total TCDD	Difference	J-FDPA
Total HpCDF	RPD	J-FDPR

For set, SIB-SC-E35-2-3-07082022 and FD-04-07082022:

ANALYTE	OUTLIER	QUALIFIER
1,2,3,4,6,7,8-HpCDF	Difference	J-FDPA
1,2,3,4,6,7,8-HpCDD	RPD	J-FDPR
1,2,3,6,7,8-HxCDD	Difference	J-FDPA
2,3,7,8-TCDF	Difference	J-FDPA
OCDF	Difference	J-FDPA
OCDD	RPD	J-FDPR
Total HpCDD	RPD	J-FDPR
Total HxCDF	Difference	J-FDPA
Total HxCDD	Difference	J-FDPA
Total PeCDF	Difference	J-FDPA
Total PeCDD	Difference	J-FDPA
Total TCDF	Difference	J-FDPA
Total TCDD	Difference	J-FDPA
Total HpCDF	Difference	J-FDPA

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF positive results when using the DB5 GC column for analysis. The DB5 column cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. Although the laboratory used a DB-5MS column which more adequately separates TCDF isomers, the laboratory still performed a second column confirmation on a DB-225 column when 2,3,7,8-TCDF was detected, and the concentration was greater than the reporting limit. Both sets of results were reported. The 2,3,7,8-TCDF results from the DB-5MS column were qualified do-not-report (DNR-EXC) in favor of the results from the DB-225 column.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. These results were K-flagged by the laboratory. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated

positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were qualified (J-VJ).

Calculation Verification

Calculation verifications were performed for this sample delivery group (SDG). No calculation or transcription errors were found.

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. With the exception noted above, accuracy was acceptable, as demonstrated by the labeled compound, LCS/LCSD, and MS/MSD recoveries. With the exception noted above, precision was also acceptable as indicated by the LCS/LCSD, MS/MSD, and field duplicate samples.

Data were qualified as not detected due to method blank contamination. Data were estimated to indicate that EMPC values are estimated maximum possible concentrations. Data were also estimated due to MS/MSD accuracy and precision outliers, and field duplicate precision outliers.

Data were flagged as do-not-report (DNR) to indicate which result (from multiple reported analyses) should not be used. Data that have been flagged DNR should not be used for any purpose.

All other data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r ² below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

QC Element	Reason Code	Definition
Low-Level Calibration Check	LLCH	Low-level calibration check above the upper limit
Low-Level Calibration Check	LLCL	Low-level calibration check below the lower limit
Low-Level Calibration Check	LLXL	Low-level calibration check below the lower limit, extreme discrepancy
Method Blank	MBH	Method blank result \geq LOQ
Method Blank	MBHB	Result is judged to be biased high based on associated method blank result
Method Blank	MBL	Method blank result $<$ LOQ
Matrix Spike	MSH	MS and/or MSD %R above acceptance criterion
Matrix Spike	MSL	MS and/or MSD %R below acceptance criterion
Matrix Spike	MSLX	MS and/or MSD %R below acceptance criterion, extreme discrepancy
Matrix Spike	MSP	MS/MSD RPD above acceptance criterion
Post-Digestion Spike	PDH	Post-digestion spike recovery high
Post-Digestion Spike	PDL	Post-digestion spike recovery low
Post-Digestion Spike	PDLX	Post-digestion spike recovery low, extreme discrepancy
Post-Digestion Spike	PDN	Post-digestion spike not performed or not applicable and serial dilution result not performed or not applicable
Sample Delivery and Condition	BUB	Bubbles $>$ 5 millimeters in volatile organic compounds vial
Sample Delivery and Condition	DAM	Sample container damaged
Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor

DATA VALIDATION REPORT

HGL – SWAN ISLAND BASIN

Prepared for:

HydroGeoLogic, Inc
11107 Sunset Hills Rd. Suite 400
Reston, VA 20190

Prepared by:

EcoChem, Inc.
500 Union Street, Suite 1010
Seattle, WA 98101

EcoChem Project: C28601-1

SDG: 20006

February 13, 2023

Approved for Release:

A handwritten signature in black ink, appearing to read "Michela Hernandez". The signature is written in a cursive style and is positioned above a horizontal line.

Michela Hernandez
Senior Project Chemist
EcoChem, Inc.

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of compliance review (EPA Stage 2A) performed on sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Dioxins/Furans	E1613B	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, November 2020).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

Dioxin/Furan Compounds by EPA 1613B

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory and field quality control (QC) samples. All data received a compliance screening level of review (EPA Stage 2A). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES AND MATRIX	VALIDATION LEVEL
20006	26 Sediment	Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	1	Certified Reference Material
2	Laboratory Blanks	2	Field Duplicates
1	Field Blanks	✓	Target Analyte List
✓	Labeled Compound Recovery	✓	Reporting Limits
2	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	2	Compound Identification
✓	Laboratory Control Samples (LCS/LCSD)	2	Compound Quantitation

✓ Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

Sample identification (ID) date suffixes were missing the "/" in the EDD as noted on the chains-of-custody (COC).

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported

in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned K-flags to values when a peak was detected but did not meet identification criteria. These values are considered positive identifications which are “estimated maximum possible concentrations” or EMPC. When these occurred in the method blank the results were evaluated as positive results. When these occurred in the associated samples, any EMPC values that were less than the method blank action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. Various target analytes were detected in the method blanks, however only the following analytes required qualification in one or more samples:

Extraction Batch 50440:

CLIENT ID	ANALYTE	QUALIFIER
SIB-SC-E36-1-2-07/08/2022	1,2,3,4,7,8-HxCDF	U-MBL
	1,2,3,7,8-PeCDF	U-MBL
SIB-SC-E36-2-3-07/08/2022	1,2,3,7,8-PeCDF	U-MBL
SIB-SC-E36-3-4-07/08/2022	1,2,3,7,8-PeCDF	U-MBL

Extraction Batch 50443:

CLIENT ID	ANALYTE	QUALIFIER
SIB-SC-D36-1-2-07082022	1,2,3,4,7,8-HxCDF	U-MBL
	1,2,3,7,8-PeCDF	U-MBL
SIB-SC-D36-2-3-07082022	1,2,3,7,8-PeCDF	U-MBL
SIB-SC-D36-3-4-07/08/2022	1,2,3,7,8-PeCDF	U-MBL
FD-05-07/08/2022	1,2,3,4,7,8-HxCDF	U-MBL
	1,2,3,7,8-PeCDF	U-MBL
	2,3,4,6,7,8-HxCDF	U-MBL
SIB-SC-D36-4-5-07082022	1,2,3,7,8-PeCDF	U-MBL
SIB-SC-F32-2-3-07082022	1,2,3,7,8-PeCDF	U-MBL
SIB-SC-F32-3-4-07082022	1,2,3,7,8-PeCDF	U-MBL
SIB-SC-F32-4-5-07082022	1,2,3,4,6,7,8-HpCDF	U-MBL
	1,2,3,4,7,8-HxCDF	U-MBL
	2,3,4,6,7,8-HxCDF	U-MBL
SIB-SC-F32-5-6-07082022	1,2,3,4,6,7,8-HpCDF	U-MBL
	1,2,3,4,6,7,8-HpCDD	U-MBL
	1,2,3,4,7,8-HxCDF	U-MBL
SIB-SC-F31-2-3-07082022	1,2,3,7,8-PeCDF	U-MBL
SIB-SC-F31-4-5-07082022	1,2,3,7,8-PeCDF	U-MBL

Field Blanks

No field blank samples were submitted with this SDG.

Matrix Spike/Matrix Spike Duplicate

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. Precision is evaluated using the relative percent difference (RPD) values calculated between the MS and MSD results. When the MS/MSD %R values indicate a potential low bias, associated results are estimated (J/UJ-MSL). Only the associated positive results are estimated (J-MSH) if the %R values indicate a potential high bias. Associated positive results are estimated (J-MSP) if the RPD values indicate uncertainty. No qualifiers are assigned for %R value outliers if the parent concentration is greater than 4x the spike concentration. Qualifiers are only issued to the parent sample.

For Extraction Batch 50443, MS/MSD analyses were performed using Sample SIB-SC-D36-4-5-07/08/2022. The following qualifiers were assigned:

ANALYTE	MS %R	MSD %R	RPD	QUALIFIER
1,2,3,4,6,7,8-HpCDD	278	272	OK	J-MSH
1,2,3,4,6,7,8-HpCDF	OK	152	20.8	J-MSH,MSP
OCDF	OK	158	21.1	J-MSH,MSP

For Extraction Batch 50440, MS/MSD analyses were performed using a sample from another SDG. The results were not submitted with this SDG. No action was taken.

Certified Reference Material

No certified reference materials were analyzed.

Field Duplicates

For sediment samples, the RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL.

One set of field duplicates, SIB-SC-D36-3-4-07/08/2022 & FD-05-07/08/2022, was submitted. The following outliers required qualification:

ANALYTE	OUTLIER TYPE	QUALIFIER
1,2,3,4,6,7,8-HpCDF	Difference	J-FDPA
1,2,3,4,6,7,8-HpCDD	RPD	J-FDPR
OCDF	Difference	J-FDPA
OCDD	RPD	J-FDPR
Total HpCDD	RPD	J-FDPR
Total HpCDF	RPD	J-FDPR
Total HxCDF	Difference	J-FDPA
Total HxCDD	Difference	J-FDPA
Total PeCDF	Difference	J-FDPA
Total TCDF	RPD	J-FDPR
Total TCDD	Difference	J-FDPA

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF positive results when using the DB5 GC column for analysis. The DB5 column cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. Although the laboratory used a DB-5MS column which more adequately separates TCDF isomers, the laboratory still performed a second column confirmation on a DB-225 column when 2,3,7,8-TCDF was detected, and the concentration was greater than the reporting limit. Both sets of results were reported. The 2,3,7,8-TCDF results from the DB-5MS column were qualified do-not-report (DNR-EXC) in favor of the results from the DB-225 column.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. These results were K-flagged by the laboratory. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were qualified (J-VJ).

Compound Quantitation

The laboratory flagged sample results with an "E" flag indicating the sample results exceeded the calibrated linear range of the instrument. These results were estimated (J-ACR).

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. With the exceptions noted above, accuracy was acceptable, as demonstrated by the labeled compound, LCS/LCSD, and MS/MSD recoveries. With the exceptions noted above, precision was also acceptable as indicated by the LCS/LCSD, MS/MSD, and field duplicate samples.

Data were qualified as not detected due to method blank contamination. Data were estimated to indicate that EMPC values are estimated maximum possible concentrations. Other data were estimated due to MS/MSD accuracy and precision outliers as well as calibration range exceedances and field duplicate precision outliers.

Data were flagged as do-not-report (DNR) to indicate which result (from multiple reported analyses) should not be used. Data that have been flagged DNR should not be used for any purpose.

All other data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r ² below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

QC Element	Reason Code	Definition
Low-Level Calibration Check	LLCH	Low-level calibration check above the upper limit
Low-Level Calibration Check	LLCL	Low-level calibration check below the lower limit
Low-Level Calibration Check	LLXL	Low-level calibration check below the lower limit, extreme discrepancy
Method Blank	MBH	Method blank result \geq LOQ
Method Blank	MBHB	Result is judged to be biased high based on associated method blank result
Method Blank	MBL	Method blank result $<$ LOQ
Matrix Spike	MSH	MS and/or MSD %R above acceptance criterion
Matrix Spike	MSL	MS and/or MSD %R below acceptance criterion
Matrix Spike	MSLX	MS and/or MSD %R below acceptance criterion, extreme discrepancy
Matrix Spike	MSP	MS/MSD RPD above acceptance criterion
Post-Digestion Spike	PDH	Post-digestion spike recovery high
Post-Digestion Spike	PDL	Post-digestion spike recovery low
Post-Digestion Spike	PDLX	Post-digestion spike recovery low, extreme discrepancy
Post-Digestion Spike	PDN	Post-digestion spike not performed or not applicable and serial dilution result not performed or not applicable
Sample Delivery and Condition	BUB	Bubbles $>$ 5 millimeters in volatile organic compounds vial
Sample Delivery and Condition	DAM	Sample container damaged
Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor

EcoChem, Inc.

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of compliance review (EPA Stage 2A) performed on sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Dioxins/Furans	E1613B	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, November 2020).

EcoChem’s goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

Dioxin/Furan Compounds by EPA 1613B

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory and field quality control (QC) samples. All data received a compliance screening level of review (EPA Stage 2A). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES AND MATRIX	VALIDATION LEVEL
20007	21 Sediment	Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	1	Certified Reference Material
2	Laboratory Blanks	2	Field Duplicates
1	Field Blanks	✓	Target Analyte List
✓	Labeled Compound Recovery	✓	Reporting Limits
2	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	2	Compound Identification
✓	Laboratory Control Samples (LCS/LCSD)	2	Compound Quantitation

✓ Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

Sample identification (ID) date suffixes were missing the "/" in the EDD as noted on the chains-of-custody (COC).

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned K-flags to values when a peak was detected but did not meet identification criteria. These values are considered positive identifications which are "estimated maximum possible concentrations" or EMPC. When these occurred in the method blank the results were evaluated as positive results. When these occurred in the associated samples, any EMPC values that were less than the method blank action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. Various target analytes were detected in the method blanks, however only the following analytes required qualification in one or more samples:

Extraction Batch 50478: Multiple analytes were detected; however, all associated field sample results were greater than the 5x action levels; no data were qualified.

Extraction Batch 50752: The following field sample results were qualified as not detected:

CLIENT ID	ANALYTE	QUALIFIER
SIB-SC-E32-1-2-07/09/2022	1,2,3,4,7,8-HxCDF	U-MBL
	1,2,3,7,8,9-HxCDD	U-MBL
	1,2,3,7,8-PeCDF	U-MBL
	1,2,3,7,8-PeCDD	U-MBL
	2,3,7,8-TCDF	U-MBL
SIB-SC-E32-2-3-07/09/2022	1,2,3,7,8-PeCDF	U-MBL
	1,2,3,7,8-PeCDD	U-MBL
	2,3,7,8-TCDF	U-MBL
SIB-SC-E32-3-4-07/09/2022	1,2,3,7,8-PeCDF	U-MBL
	1,2,3,7,8-PeCDD	U-MBL
	2,3,7,8-TCDF	U-MBL
SIB-SC-D30-5-6-07/09/2022	1,2,3,7,8-PeCDF	U-MBL
SIB-SC-D31-1-2-07/09/2022	1,2,3,7,8-PeCDF	U-MBL
SIB-SC-D31-5-6-07/09/2022	1,2,3,4,7,8-HxCDF	U-MBL
	1,2,3,7,8-PeCDF	U-MBL
	1,2,3,7,8-PeCDD	U-MBL
	2,3,7,8-TCDF	U-MBL

Field Blanks

No field blank samples were submitted with this SDG.

Matrix Spike/Matrix Spike Duplicate

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. Precision is evaluated using the relative percent difference (RPD) values calculated between the MS and MSD results. When the MS/MSD %R values indicate a potential low bias, associated results are estimated (J/UJ-MSL). Only the associated positive results are estimated (J-MSH) if the %R values indicate a potential high bias. Associated positive results are estimated (J-MSP) if the RPD values indicate uncertainty. No qualifiers are assigned for %R value outliers if the parent concentration is greater than 4x the spike concentration. Qualifiers are only issued to the parent sample.

For Extraction Batch 50478, the MS/MSD analyses were performed using Sample SIB-SC-E31-2-3-07/09/2022. The following qualifiers were assigned:

ANALYTE	MS %R	MSD %R	RPD	QUALIFIER
1,2,3,4,6,7,8-HpCDF	69	OK	OK	J-MSL
1,2,3,4,6,7,8,9-OCDF	41	OK	OK	J-MSL

For Extraction Batch, 50752, MS/MSD analyses were performed on two samples. The first MS/MSD was performed using Sample SIB-SC-E32-5-6-07/09/2022. The following qualifiers were assigned:

ANALYTE	MS %R	MSD %R	RPD	QUALIFIER
1,2,3,6,7,8-HxCDD	OK	OK	24.2	J-MSP
1,2,3,4,6,7,8-HpCDD	383	-194	144	J-MSH,MSLX,MSP
1,2,3,4,6,7,8-HpCDF	161	44	72.0	J-MSH,MSL,MSP
OCDF	183	21	86.8	J-MSH,MSL,MSP
OCDD	Parent conc. > 4x spike		183	J-MSP

The second MS/MSD analyses were performed using Sample SIB-SC-D30-3-4-07/09/2022. The following qualifiers were assigned:

ANALYTE	MS %R	MSD %R	RPD	QUALIFIER
1,2,3,4,6,7,8-HpCDF	6	36	OK	J-MSLX,MSL
1,2,3,4,6,7,8,9-OCDF	-58	-49	OK	J-MSLX

Certified Reference Material

No certified reference materials were analyzed.

Field Duplicates

For sediment samples, the RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL.

One set of field duplicates, SIB-SC-E31-1-2-07/09/2022 & FD-06-07/09/2022, was submitted. The following outliers required qualification:

ANALYTE	OUTLIER TYPE	QUALIFIER
OCDD	RPD	J-FDPR
1,2,3,4,6,7,8-HpCDF	Difference	J-FDPA
1,2,3,4,6,7,8-HpCDD	Difference	J-FDPA
1,2,3,4,7,8-HxCDF	Difference	J/UJ-FDPA
1,2,3,6,7,8-HxCDD	Difference	J-FDPA
1,2,3,7,8,9-HxCDD	Difference	J/UJ-FDPA
2,3,7,8-TCDF	Difference	J/UJ-FDPA
OCDF	Difference	J-FDPA
Total HpCDD	RPD	J-FDPR
Total HxCDF	Difference	J-FDPA
Total HxCDD	Difference	J-FDPA
Total PeCDF	Difference	J-FDPA
Total PeCDD	Difference	J-FDPA
Total TCDF	Difference	J/UJ-FDPA
Total TCDD	Difference	J/UJ-FDPA
Total HpCDF	Difference	J-FDPA

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF positive results when using the DB5 GC column for analysis. The DB5 column cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. Although the laboratory used a DB-5MS column which more adequately separates TCDF isomers, the laboratory still performed a second column confirmation on a DB-225 column when 2,3,7,8-TCDF was detected, and the concentration was greater than the reporting limit. Both sets of results were reported. The 2,3,7,8-TCDF results from the DB-5MS column were qualified do-not-report (DNR-EXC) in favor of the results from the DB-225 column.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. These results were K-flagged by the laboratory. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were qualified (J-VJ).

Compound Quantitation

The laboratory flagged sample results with an "E" flag indicating the sample results exceeded the calibrated linear range of the instrument. These results were estimated (J-ACR).

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. With the exceptions noted above, accuracy was acceptable, as demonstrated by the labeled compound, LCS/LCSD, and MS/MSD, recoveries. With the exceptions noted above, precision was also acceptable as indicated by the LCS/LCSD, MS/MSD, and field duplicate samples.

Data were qualified as not detected due to method blank contamination. Data were estimated to indicate that EMPC values are estimated maximum possible concentrations. Data were also estimated due to MS/MSD accuracy and precision outliers as well as calibration range exceedances and field duplicate precision outliers.

Data were flagged as do-not-report (DNR) to indicate which result (from multiple reported analyses) should not be used. Data that have been flagged DNR should not be used for any purpose.

All other data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)

Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r ² below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of compliance review (EPA Stage 2A) performed on sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Dioxins/Furans	E1613B	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, November 2020).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

Dioxin/Furan Compounds by EPA 1613B

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory and field quality control (QC) samples. All data received a compliance screening level of review (EPA Stage 2A). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES AND MATRIX	VALIDATION LEVEL
20008	27 Sediment	Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	1	Certified Reference Material
2	Laboratory Blanks	2	Field Duplicates
1	Field Blanks	✓	Target Analyte List
✓	Labeled Compound Recovery	✓	Reporting Limits
✓	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	2	Compound Identification
✓	Laboratory Control Samples (LCS/LCSD)	2	Compound Quantitation

✓ Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

Sample identification (ID) date suffices were missing the "/" in the EDD as noted on the chains-of-custody (COC).

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned K-flags to values when a peak was detected but did not meet identification criteria. These values are considered positive identifications which are "estimated maximum possible concentrations" or EMPC. When these occurred in the method blank the results were evaluated as positive results. When these occurred in the associated samples, any EMPC values that were less than the method blank action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. Various target analytes were detected in the method blanks, however only the following analytes required qualification in one or more samples:

Extraction Batch 50755: Multiple analytes were detected, however, all associated field sample results were greater than the 5x action levels; no data were qualified.

Extraction Batch 50529: The following field sample results were qualified as not detected:

Field Blanks

No field blank samples were submitted with this SDG.

Certified Reference Material

No certified reference materials were analyzed.

Field Duplicates

For sediment samples, the RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL.

One set of field duplicates, SIB-SC-E28-3-4-07/10/2022 & FD-07-07/10/2022, was submitted. The difference value for Total TCDD was greater than the control limit; the parent and field duplicate results were estimated (J-FDPA).

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF positive results when using the DB5 GC column for analysis. The DB5 column cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. Although the laboratory used a DB-5MS column which more adequately separates TCDF isomers, the laboratory still performed a second column confirmation on a DB-225 column when 2,3,7,8-TCDF was detected, and the concentration was greater than the reporting limit. Both sets of results were reported. The 2,3,7,8-TCDF results from the DB-5MS column were qualified do-not-report (DNR-EXC) in favor of the results from the DB-225 column.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. These results were K-flagged by the laboratory. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were qualified (J-VJ).

Compound Quantitation

The laboratory flagged sample results with an "E" flag indicating the sample results exceeded the calibrated linear range of the instrument. These results were estimated (J-ACR).

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. Accuracy was acceptable, as demonstrated by the labeled compound, LCS/LCSD, and MS/MSD recoveries. With the exceptions noted above, precision was also acceptable as indicated by the LCS/LCSD, MS/MSD and field duplicate samples.

Data were qualified as not detected due to method blank contamination. Data were estimated to indicate that EMPC values are estimated maximum possible concentrations. Data were also estimated due to calibration range exceedances and a field duplicate precision outlier.

Data were flagged as do-not-report (DNR) to indicate which result (from multiple reported analyses) should not be used. Data that have been flagged DNR should not be used for any purpose.

All other data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r ² below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

QC Element	Reason Code	Definition
Low-Level Calibration Check	LLCH	Low-level calibration check above the upper limit
Low-Level Calibration Check	LLCL	Low-level calibration check below the lower limit
Low-Level Calibration Check	LLXL	Low-level calibration check below the lower limit, extreme discrepancy
Method Blank	MBH	Method blank result \geq LOQ
Method Blank	MBHB	Result is judged to be biased high based on associated method blank result
Method Blank	MBL	Method blank result $<$ LOQ
Matrix Spike	MSH	MS and/or MSD %R above acceptance criterion
Matrix Spike	MSL	MS and/or MSD %R below acceptance criterion
Matrix Spike	MSLX	MS and/or MSD %R below acceptance criterion, extreme discrepancy
Matrix Spike	MSP	MS/MSD RPD above acceptance criterion
Post-Digestion Spike	PDH	Post-digestion spike recovery high
Post-Digestion Spike	PDL	Post-digestion spike recovery low
Post-Digestion Spike	PDLX	Post-digestion spike recovery low, extreme discrepancy
Post-Digestion Spike	PDN	Post-digestion spike not performed or not applicable and serial dilution result not performed or not applicable
Sample Delivery and Condition	BUB	Bubbles $>$ 5 millimeters in volatile organic compounds vial
Sample Delivery and Condition	DAM	Sample container damaged
Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor

DATA VALIDATION REPORT

HGL – SWAN ISLAND BASIN

Prepared for:

HydroGeoLogic, Inc
11107 Sunset Hills Rd. Suite 400
Reston, VA 20190

Prepared by:

EcoChem, Inc.
500 Union Street, Suite 1010
Seattle, WA 98101

EcoChem Project: C28601-1

SDG: 20009

February 13, 2023

Approved for Release:

A handwritten signature in black ink, appearing to read "Michela Hernandez". The signature is written in a cursive style and is positioned above a horizontal line.

Michela Hernandez
Senior Project Chemist
EcoChem, Inc.

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of full review (EPA Stage 4) performed on sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Dioxins/Furans	E1613B	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, November 2020).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

Dioxin/Furan Compounds by EPA 1613B

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory and field quality control (QC) samples. All data received a full level of review (EPA Stage 4). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES AND MATRIX	VALIDATION LEVEL
20009	12 Sediment	Stage 4

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table.

2	Sample Receipt, Preservation, and Holding Times	✓	Laboratory Control Samples (LCS/LCSD)
✓	System Performance and Resolution Checks	1	Certified Reference Material
✓	Initial Calibration (ICAL)	1	Field Duplicates
✓	Calibration Verification (CCAL)	✓	Target Analyte List
2	Laboratory Blanks	✓	Reporting Limits
1	Field Blanks	2	Compound Identification
✓	Labeled Compound Recovery	✓	Compound Quantitation
2	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	1	Calculation Verification

✓ Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

Sample identification (ID) date suffices were missing the "/" in the EDD as noted on the chains-of-custody (COC).

Sample SIB-SC-F27-2-3-07/10/2022 arrived with broken containers and were transferred to new jars. All results for this sample were estimated (J/UJ-DAM).

For Samples SIB-SC-B31-1-2-07102022 and SIB-SC-F27-4-5-07102022, one of the sample containers arrived broken. Since second jar arrived intact, no qualifiers were assigned.

For Sample SIB-SC-F27-1-2-07102022, the lids of the sample containers were cracked upon arrival at the laboratory. Since the sample containers were intact, no qualifiers were assigned.

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned K-flags to values when a peak was detected but did not meet identification criteria. These values are considered positive identifications which are "estimated maximum possible concentrations" or EMPC. When these occurred in the method blank the results were evaluated as positive results. When these occurred in the associated samples, any EMPC values that were less than the method blank action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. Various target analytes were detected in the method blanks, however only the following analytes required qualification in one or more samples:

Extraction Batch 50757: The following field sample results were qualified as not detected:

CLIENT ID	ANALYTE	QUALIFIER
FD-08-07/10/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
SIB-SC-B31-2-3-07/10/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
SIB-SC-B31-3-4-07102022	OCDD	U-MBL
SIB-SC-F27-2-3-07102022	1,2,3,4,6,7,8-HpCDF	U-MBL
SIB-SC-F27-4-5-07102022	1,2,3,4,6,7,8-HpCDF	U-MBL
	OCDD	U-MBL
SIB-SC-F27-5-6-07102022	1,2,3,4,6,7,8-HpCDF	U-MBL
	OCDD	U-MBL

Field Blanks

No field blank samples were submitted with this SDG.

Matrix Spike/Matrix Spike Duplicate

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. Precision is evaluated using the relative percent difference (RPD) values calculated between the MS and MSD results. When the MS/MSD %R values indicate a potential low bias, associated results are estimated (J/UJ-MSL). Only the associated positive results are estimated (J-MSH) if the %R values indicate a potential high bias. Associated positive results are estimated (J-MSP) if the RPD values indicate uncertainty. No qualifiers are assigned for %R value outliers if the parent concentration is greater than 4x the spike concentration. Qualifiers are only issued to the parent sample.

For Extraction Batch 50755, the MS/MSD analyses were performed using Sample SIB-SC-B31-2-3-07/10/2022. The following qualifiers were assigned:

ANALYTE	MS %R	MSD %R	RPD	QUALIFIER
OCDD	OK	OK	30.7	J-MSP

Certified Reference Material

No certified reference materials were analyzed.

Field Duplicates

For sediment samples, the RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL.

One set of field duplicates, SIB-SC-B31-2-3-07/10/2022 & FD-08-07/10/2022, was submitted. Field precision was acceptable.

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF positive results when using the DB5 GC column for analysis. The DB5 column cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. Although the laboratory used a DB-5MS column which more adequately separates TCDF isomers, the laboratory still performed a second column confirmation on a DB-225 column when 2,3,7,8-TCDF was detected, and the concentration was greater than the reporting limit. Both sets of results were reported. The 2,3,7,8-TCDF results from the DB-5MS column were qualified do-not-report (DNR-EXC) in favor of the results from the DB-225 column.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. These results were K-flagged by the laboratory. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were qualified (J-VJ).

Calculation Verification

Calculation verifications were performed for this sample delivery group (SDG). No calculation or transcription errors were found.

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. Accuracy was acceptable, as demonstrated by the labeled compound, LCS/LCSD, and MS/MSD recoveries. With the exception noted above, precision was also acceptable as indicated by the LCS/LCSD, MS/MSD, and field duplicate samples.

Data were qualified as not detected due to method blank contamination. Data were estimated to indicate that EMPC values are estimated maximum possible concentrations. Data were also estimated due to sample container damage and a MS/MSD precision outlier.

Data were flagged as do-not-report (DNR) to indicate which result (from multiple reported analyses) should not be used. Data that have been flagged DNR should not be used for any purpose.

All other data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.
-----	-----------------------------------------------------------------------------------------

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r ² below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

QC Element	Reason Code	Definition
Low-Level Calibration Check	LLCH	Low-level calibration check above the upper limit
Low-Level Calibration Check	LLCL	Low-level calibration check below the lower limit
Low-Level Calibration Check	LLXL	Low-level calibration check below the lower limit, extreme discrepancy
Method Blank	MBH	Method blank result \geq LOQ
Method Blank	MBHB	Result is judged to be biased high based on associated method blank result
Method Blank	MBL	Method blank result $<$ LOQ
Matrix Spike	MSH	MS and/or MSD %R above acceptance criterion
Matrix Spike	MSL	MS and/or MSD %R below acceptance criterion
Matrix Spike	MSLX	MS and/or MSD %R below acceptance criterion, extreme discrepancy
Matrix Spike	MSP	MS/MSD RPD above acceptance criterion
Post-Digestion Spike	PDH	Post-digestion spike recovery high
Post-Digestion Spike	PDL	Post-digestion spike recovery low
Post-Digestion Spike	PDLX	Post-digestion spike recovery low, extreme discrepancy
Post-Digestion Spike	PDN	Post-digestion spike not performed or not applicable and serial dilution result not performed or not applicable
Sample Delivery and Condition	BUB	Bubbles $>$ 5 millimeters in volatile organic compounds vial
Sample Delivery and Condition	DAM	Sample container damaged
Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of compliance review (EPA Stage 2A) performed on sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
PCB Congeners	E1668	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, April 2020).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

PCB Congeners by EPA 1668C

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory and field quality control (QC) samples. All data received a compliance screening level of review (EPA Stage 2A). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the Sample Index for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
20024	28 Sediment	Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	2	Field Duplicates
2	Laboratory Blanks	✓	Target Analyte List
1	Field Blanks	1	Reporting Limits
✓	Labeled Compound Recovery	2	Compound Identification
2	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	✓	Compound Quantitation
✓	Laboratory Control Samples (LCS/LCSD)	1	Field Replicates
1	Certified Reference Material		

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted.

Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

Sample identification (ID) date suffices were missing the "/" in the EDD as noted on the chains-of-custody (COC).

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned K-flags to values when a peak was detected but did not meet identification criteria. These values are considered positive identifications which are "estimated maximum possible concentrations" or EMPC. When these occurred in the method blank the results were evaluated as positive results. When these occurred in the associated samples, any EMPC values that were less than the method blank action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. Various target analytes were detected in the method blanks, however only the following analytes required qualification in one or more samples:

Extraction Batch 50461: The following field sample results were qualified as not detected:

Client ID	Analyte	Qualifier
SIB-SC-D22-2-3-07/06/2022	PCB-011	U-MBL
SIB-SC-D22-3-4-07/06/2022	PCB-011	U-MBL

Extraction Batch 50532: Thirty-eight (38) compounds were detected; however, all associated sample results were greater than the 5x action levels or were non-detected; no data were qualified.

Field Blanks

Equipment rinsate blanks associated with sediment cores were submitted separately from the associated field samples. Based on review of the table of equipment blank associations, equipment blank EB01-07122022 is associated with the samples with results reported in this SDG; results for these EB were reported in CFA SDG 20047. Several results were detected in EB01-07122022, however; no data were qualified based on field blank contamination.

Matrix Spikes/Matrix Spike Duplicates

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. Precision is evaluated using the relative percent difference (RPD) values calculated between the MS and MSD results. When the MS/MSD %R values indicate a potential low bias, associated results are estimated (J/UJ-MSL). Only the associated positive results are estimated (J-MSH) if the %R values indicate a potential high bias. Associated positive results are estimated (J-MSP) if the RPD values indicate uncertainty. No qualifiers are assigned for %R value outliers if the parent concentration is greater than 4x the spike concentration. Qualifiers are only issued to the parent sample.

For Extraction Batch 50461, MS/MSD analyses were performed using Sample SIB-SC-D22-1-2-07/06/2022. The following qualifiers were assigned:

ANALYTE	MS %R	MSD %R	RPD	QUALIFIER
PCB-105	182	272	OK	J-MSH

For Extraction Batch 50532, the MS/MSD analyses were performed using Sample FD-02-07/07/2022. The following qualifiers were assigned:

ANALYTE	MS %R	MSD %R	RPD	QUALIFIER
PCB-206	OK	OK	43	J-MSP
PCB-208	OK	OK	40	J-MSP
PCB-209	OK	890	162	J-MSH,MSP

Certified Reference Material

No certified reference materials were analyzed.

Field Duplicates

For sediment samples, the RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL.

Two sets of field duplicates were submitted.

- SIB-SC-C34-3-4-07/07/2022 & FD-02-07/07/2022:

ANALYTE	OUTLIER TYPE	QUALIFIER
PCB-68	Difference	J-FDPA
PCB-88	Difference	J-FDPA
PCB-99	RPD	J-FDPR
PCB-133	Difference	J-FDPA
PCB-135	RPD	J-FDPR
PCB-146	RPD	J-FDPR
PCB-148	Difference	J-FDPA
PCB-154	Difference	J-FDPA

- SIB-SC-B35-4-5-07/07/2022 and FD-03-07/07/2022: Field precision was acceptable.

Reporting Limits

The laboratory reporting limits were greater than the QAPP CFA Sensitivity Limits.

Compound Identification

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. These results were K-flagged by the laboratory. An

EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were qualified (J-VJ).

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. With the exceptions noted above, accuracy was acceptable as demonstrated by the labeled compound, LCS/LCSD, and MS/MSD recoveries. With the exceptions noted above, precision was also acceptable as reported by the LCS/LCSD, matrix spike/matrix spike duplicate, and field duplicate RPD values.

Data were qualified as not detected due to method blank contamination. Data were estimated to indicate that EMPC values are estimated maximum possible concentrations. Data were also estimated due to sample container damage, MS/MSD accuracy outliers, as well as MS/MSD and field duplicate precision outliers.

All data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r ² below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

QC Element	Reason Code	Definition
Low-Level Calibration Check	LLCH	Low-level calibration check above the upper limit
Low-Level Calibration Check	LLCL	Low-level calibration check below the lower limit
Low-Level Calibration Check	LLXL	Low-level calibration check below the lower limit, extreme discrepancy
Method Blank	MBH	Method blank result \geq LOQ
Method Blank	MBHB	Result is judged to be biased high based on associated method blank result
Method Blank	MBL	Method blank result $<$ LOQ
Matrix Spike	MSH	MS and/or MSD %R above acceptance criterion
Matrix Spike	MSL	MS and/or MSD %R below acceptance criterion
Matrix Spike	MSLX	MS and/or MSD %R below acceptance criterion, extreme discrepancy
Matrix Spike	MSP	MS/MSD RPD above acceptance criterion
Post-Digestion Spike	PDH	Post-digestion spike recovery high
Post-Digestion Spike	PDL	Post-digestion spike recovery low
Post-Digestion Spike	PDLX	Post-digestion spike recovery low, extreme discrepancy
Post-Digestion Spike	PDN	Post-digestion spike not performed or not applicable and serial dilution result not performed or not applicable
Sample Delivery and Condition	BUB	Bubbles $>$ 5 millimeters in volatile organic compounds vial
Sample Delivery and Condition	DAM	Sample container damaged
Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of compliance review (EPA Stage 2A) performed on sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Dioxins/Furans	E1613B	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, November 2020).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

Dioxin/Furan Compounds by EPA 1613B

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory and field quality control (QC) samples. All data received a compliance screening level of review (EPA Stage 2A). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES AND MATRIX	VALIDATION LEVEL
20067	26 Sediment	Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	1	Certified Reference Material
2	Laboratory Blanks	2	Field Duplicates
1	Field Blanks	✓	Target Analyte List
✓	Labeled Compound Recovery	✓	Reporting Limits
2	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	2	Compound Identification
1	Laboratory Control Samples (LCS/LCSD)	2	Compound Quantitation

✓ Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

Sample identification (ID) date suffixes were missing the "/" in the EDD as noted on the chains-of-custody (COC).

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned K-flags to values when a peak was detected but did not meet identification criteria. These values are considered positive identifications which are "estimated maximum possible concentrations" or EMPC. When these occurred in the method blank the results were evaluated as positive results. When these occurred in the associated samples, any EMPC values that were less than the method blank action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. Various target analytes were detected in the method blanks, however only the following analytes required qualification in one or more samples:

Extraction Batch, 50549: The following field sample results were qualified as not detected:

CLIENT ID	ANALYTE	QUALIFIER
SIB-SC-G06-1-2-07/14/2022	1,2,3,7,8-PeCDF	U-MBL
SIB-SC-G06-3-4-07/14/2022	1,2,3,7,8-PeCDF	U-MBL

	OCDD	U-MBL

Field Blanks

No field blank samples were submitted with this SDG.

Matrix Spike/Matrix Spike Duplicate

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. Precision is evaluated using the relative percent difference (RPD) values calculated between the MS and MSD results. When the MS/MSD %R values indicate a potential low bias, associated results are estimated (J/UJ-MSL). Only the associated positive results are estimated (J-MSH) if the %R values indicate a potential high bias. Associated positive results are estimated (J-MSP) if the RPD values indicate uncertainty. No qualifiers are assigned for %R value outliers if the parent concentration is greater than 4x the spike concentration. Qualifiers are only issued to the parent sample.

For Extraction Batch 50564, MS/MSD analyses were performed using Sample SIB-SC-G07-2-3-07/14/2022. The following qualifiers were assigned:

ANALYTE	MS %R	MSD %R	RPD	QUALIFIER
1,2,3,4,6,7,8-HpCDD	-246	-119	69.4	J-MSLX,MSP
1,2,3,4,6,7,8-HpCDF	-1	32	27.7	J-MSLX,MSL,MSP
OCDF	-73	-7	44.8	J-MSLX,MSP
OCDD	Parent conc. > 4x spike		129	J-MSP

For Extraction Batch 50549, results for Batch MS/MSD analyses were not submitted in this SDG. No action was taken since the parent sample was from another SDG. Accuracy and precision were evaluated using the LCS/LCSD.

Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control sample duplicates (LCSD) were analyzed at the required frequency of one per batch of 20 or fewer samples. Precision is evaluated using the RPD values calculated between the LCS and LCSD results. Any RPD values outside the control limits indicate uncertainty in the measured results for the sample. Qualifiers are issued to all samples in the analysis batch.

For Extraction Batch 50549, the %R value for 1,2,3,6,7,8-HxCDF was less than the lower control limit (84-130%) for the LCSD but was in control in the associated LCS sample. All associated samples had positive results and were qualified (J-LCSL).

ANALYTE	LCS %R	LCSD %R	RPD	QUALIFIER
1,2,3,6,7,8-HxCDF	92.4	82.9	6.59	J/UJ-LCSL

Certified Reference Material

No certified reference materials were analyzed.

Field Duplicates

For sediment samples, the RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL.

One set of field duplicates, SIB-SC-G07-1-2-07/14/2022 & FD-13-07/14/2022, was submitted. The following outliers required qualification:

ANALYTE	OUTLIER TYPE	QUALIFIER
1,2,3,4,6,7,8-HPCDF	Difference	J-FDPA
1,2,3,4,6,7,8-HPCDD	RPD	J-FDPR
OCDD	RPD	J-FDPR
Total HpCDD	RPD	J-FDPR
Total HxCDD	Difference	J-FDPA
Total TCDF	Difference	J-FDPA
Total HpCDF	RPD	J-FDPR

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF positive results when using the DB5 GC column for analysis. The DB5 column cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. Although the laboratory used a DB-5MS column which more adequately separates TCDF isomers, the laboratory still performed a second column confirmation on a DB-225 column when 2,3,7,8-TCDF was detected, and the concentration was greater than the reporting limit. Both sets of results were reported. The 2,3,7,8-TCDF results from the DB-5MS column were qualified do-not-report (DNR-EXC) in favor of the results from the DB-225 column.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. These results were K-flagged by the laboratory. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were qualified (J-VJ).

Compound Quantitation

The laboratory flagged sample results with an "E" flag indicating the sample results exceeded the calibrated linear range of the instrument. These results were estimated (J-ACR).

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. With the exceptions noted above, accuracy was acceptable, as demonstrated by the labeled compound, LCS/LCSD, and MS/MSD recoveries. With the exceptions noted above, precision was also acceptable as indicated by the LCS/LCSD, MS/MSD and field duplicate samples.

Data were qualified as not detected due to method blank contamination. Data were estimated to indicate that EMPC values are estimated maximum possible concentrations. Data were also estimated due to calibration range exceedances, MS/MSD accuracy outliers, and MS/MSD and field duplicate precision outliers.

Data were flagged as do-not-report (DNR) to indicate which result (from multiple reported analyses) should not be used. Data that have been flagged DNR should not be used for any purpose.

All other data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.
-----	-----------------------------------------------------------------------------------------

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r ² below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

QC Element	Reason Code	Definition
Low-Level Calibration Check	LLCH	Low-level calibration check above the upper limit
Low-Level Calibration Check	LLCL	Low-level calibration check below the lower limit
Low-Level Calibration Check	LLXL	Low-level calibration check below the lower limit, extreme discrepancy
Method Blank	MBH	Method blank result \geq LOQ
Method Blank	MBHB	Result is judged to be biased high based on associated method blank result
Method Blank	MBL	Method blank result $<$ LOQ
Matrix Spike	MSH	MS and/or MSD %R above acceptance criterion
Matrix Spike	MSL	MS and/or MSD %R below acceptance criterion
Matrix Spike	MSLX	MS and/or MSD %R below acceptance criterion, extreme discrepancy
Matrix Spike	MSP	MS/MSD RPD above acceptance criterion
Post-Digestion Spike	PDH	Post-digestion spike recovery high
Post-Digestion Spike	PDL	Post-digestion spike recovery low
Post-Digestion Spike	PDLX	Post-digestion spike recovery low, extreme discrepancy
Post-Digestion Spike	PDN	Post-digestion spike not performed or not applicable and serial dilution result not performed or not applicable
Sample Delivery and Condition	BUB	Bubbles $>$ 5 millimeters in volatile organic compounds vial
Sample Delivery and Condition	DAM	Sample container damaged
Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor

DATA VALIDATION REPORT

HGL – SWAN ISLAND BASIN

Prepared for:

HydroGeoLogic, Inc
11107 Sunset Hills Rd. Suite 400
Reston, VA 20190

Prepared by:

EcoChem, Inc.
500 Union Street, Suite 1010
Seattle, WA 98101

EcoChem Project: C28601-1

SDG: 20068

February 16, 2023

Approved for Release:

A handwritten signature in black ink, appearing to read "Michela Hernandez". The signature is written in a cursive style and is positioned above a horizontal line.

Michela Hernandez
Senior Project Chemist
EcoChem, Inc.

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of compliance review (EPA Stage 2A) performed on sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Dioxins/Furans	E1613B	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, November 2020).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

Dioxin/Furan Compounds by EPA 1613B

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory and field quality control (QC) samples. All data received a compliance screening level of review (EPA Stage 2A). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES AND MATRIX	VALIDATION LEVEL
20068	22 Sediment	Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	1	Certified Reference Material
2	Laboratory Blanks	2	Field Duplicates
1	Field Blanks	✓	Target Analyte List
✓	Labeled Compound Recovery	✓	Reporting Limits
2	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	2	Compound Identification
✓	Laboratory Control Samples (LCS/LCSD)	2	Compound Quantitation

✓ Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

Sample identification (ID) date suffixes were missing the "/" in the EDD as noted on the chains-of-custody (COC).

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned K-flags to values when a peak was detected but did not meet identification criteria. These values are considered positive identifications which are "estimated maximum possible concentrations" or EMPC. When these occurred in the method blank the results were evaluated as positive results. When these occurred in the associated samples, any EMPC values that were less than the method blank action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. Various target analytes were detected in the method blanks, however only the following analytes required qualification in one or more samples:

Extraction Batch 50593: The following field sample results were qualified as not detected:

CLIENT ID	ANALYTE	QUALIFIER
SIB-SC-C18-1-2-07/19/2022	1,2,3,7,8-PeCDF	U-MBL
SIB-SC-D17-3-4-07/19/2022	1,2,3,7,8-PeCDF	U-MBL
SIB-SC-D17-4-5-07/19/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
	1,2,3,4,7,8-HxCDF	U-MBL
SIB-SC-D17-5-6-07/19/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
	1,2,3,4,7,8-HxCDF	U-MBL
SIB-SC-D18-4-5-07/19/2022	1,2,3,7,8-PeCDF	U-MBL
SIB-SC-D18-5-6-07/19/2022	1,2,3,4,7,8-HxCDF	U-MBL
SIB-SC-D19-4-5-07/19/2022	1,2,3,7,8-PeCDF	U-MBL

Extraction Batch 50599: The following field sample results were qualified as not detected:

CLIENT ID	ANALYTE	QUALIFIER
SIB-SC-C18-2-3-07/19/2022	1,2,3,7,8-PeCDF	U-MBL
SIB-SC-C18-3-4-07/19/2022	1,2,3,7,8-PeCDF	U-MBL
SIB-SC-C18-4-5-07/19/2022	1,2,3,4,7,8-HxCDF	U-MBL
	1,2,3,6,7,8-HxCDF	U-MBL
	2,3,4,6,7,8-HxCDF	U-MBL
SIB-SC-C18-5-6-07/19/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
	1,2,3,4,7,8-HxCDF	U-MBL
	1,2,3,6,7,8-HxCDF	U-MBL

Field Blanks

No field blank samples were submitted with this SDG.

Matrix Spike/Matrix Spike Duplicate

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. Precision is evaluated using the relative percent difference (RPD) values calculated between the MS and MSD results. When the MS/MSD %R values indicate a potential low bias, associated results are estimated (J/UJ-MSL). Only the associated positive results are estimated (J-MSH) if the %R values indicate a potential high bias. Associated positive results are estimated (J-MSP) if the RPD values indicate uncertainty. Qualifiers are only issued to the parent sample.

For Extraction Batch 50601, the MS/MSD analyses were performed using Sample SIB-SC-D17-3-4-07/19/2022. The following qualifiers were assigned:

ANALYTE	MS %R	MSD %R	RPD	QUALIFIER
1,2,3,4,6,7,8-HpCDD	131	OK	44	J-MSH,MSP
OCDD	281	-12	110	J-MSH,MSLX,MSP
OCDF	OK	OK	27	J-MSP

For Extraction Batch 50599, results for MS/MSD analyses were not submitted for this batch. Precision and accuracy were evaluated using the LCS/LCSD.

Certified Reference Material

No certified reference materials were analyzed.

Field Duplicates

For sediment samples, the RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL.

One set of field replicates, SIB-SC-D17-2-3-07/19/2022 & FD-14-07/19/2022, was submitted. The difference value for Total TCDF was greater than the control limit; associated parent and field duplicate results were estimated (J-FDPA).

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF positive results when using the DB5 GC column for analysis. The DB5 column cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. Although the laboratory used a DB-5MS column which more adequately separates TCDF isomers, the laboratory still performed a second column confirmation on a DB-225 column when 2,3,7,8-TCDF was detected, and the concentration was greater than the reporting limit. Both sets of results were reported. The 2,3,7,8-TCDF results from the DB-5MS column were qualified do-not-report (DNR-EXC) in favor of the results from the DB-225 column.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. These results were K-flagged by the laboratory. An EMPC value is reported when a peak was detected and met all identification criteria, as required by

the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were qualified (J-VJ).

Compound Quantitation

The laboratory flagged sample results with an "E" flag indicating the sample results exceeded the calibrated linear range of the instrument. These results were estimated (J-ACR).

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. With the exceptions noted above, accuracy was acceptable, as demonstrated by the labeled compound, LCS/LCSD, and MS/MSD recoveries. With the exceptions noted above, precision was also acceptable as indicated by the LCS/LCSD, MS/MSD and field duplicate samples.

Data were qualified as not detected due to method blank contamination. Data were estimated to indicate that EMPC values are estimated maximum possible concentrations. Data were also estimated due to calibration range exceedances and MS/MSD accuracy and precision outliers as well as a field duplicate precision outlier.

Data were flagged as do-not-report (DNR) to indicate which result (from multiple reported analyses) should not be used. Data that have been flagged DNR should not be used for any purpose.

All other data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services

	Last Review Date: June 15, 2021
	Next Review Date: June 2023

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r ² below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

QC Element	Reason Code	Definition
Low-Level Calibration Check	LLCH	Low-level calibration check above the upper limit
Low-Level Calibration Check	LLCL	Low-level calibration check below the lower limit
Low-Level Calibration Check	LLXL	Low-level calibration check below the lower limit, extreme discrepancy
Method Blank	MBH	Method blank result \geq LOQ
Method Blank	MBHB	Result is judged to be biased high based on associated method blank result
Method Blank	MBL	Method blank result $<$ LOQ
Matrix Spike	MSH	MS and/or MSD %R above acceptance criterion
Matrix Spike	MSL	MS and/or MSD %R below acceptance criterion
Matrix Spike	MSLX	MS and/or MSD %R below acceptance criterion, extreme discrepancy
Matrix Spike	MSP	MS/MSD RPD above acceptance criterion
Post-Digestion Spike	PDH	Post-digestion spike recovery high
Post-Digestion Spike	PDL	Post-digestion spike recovery low
Post-Digestion Spike	PDLX	Post-digestion spike recovery low, extreme discrepancy
Post-Digestion Spike	PDN	Post-digestion spike not performed or not applicable and serial dilution result not performed or not applicable
Sample Delivery and Condition	BUB	Bubbles $>$ 5 millimeters in volatile organic compounds vial
Sample Delivery and Condition	DAM	Sample container damaged
Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor

DATA VALIDATION REPORT

HGL – SWAN ISLAND BASIN

Prepared for:

HydroGeoLogic, Inc
11107 Sunset Hills Rd. Suite 400
Reston, VA 20190

Prepared by:

EcoChem, Inc.
500 Union Street, Suite 1010
Seattle, WA 98101

EcoChem Project: C28601-1

SDG: 20069

July 18, 2023

Approved for Release:

A handwritten signature in black ink, appearing to read "Michela Hernandez". The signature is written in a cursive style and is positioned above a horizontal line.

Michela Hernandez
Senior Project Chemist
EcoChem, Inc.

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of full review (EPA Stage 4) performed on sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
PCB Congeners	E1668	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, April 2020).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

PCB Congeners by EPA 1668C

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory quality control (QC) samples. All data received a full level of review (EPA Stage 4). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the Sample Index for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
20069	10 Sediment	Stage 4

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

Several results reported in the PDF are coelutions of two or more PCB congeners. In the EDD, these coelutions should be reported in the "custom field 1" field. For this SDG, only one of the coeluting PCB congeners is listed in this field. For example, PCB-12/13 from the PDF was reported as 3,4-dichlorobiphenyl (12) in the EDD. No changes were made to the EDD.

For 10 samples, the date suffix in the sample ID is expressed as DDMMYYYY instead of DD/MM/YYYY in the "sample_name" field. All sample IDs in the "sys_sample_code" field match the chain-of-custody.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

✓	Sample Receipt, Preservation, and Holding Times	✓	Ongoing Precision and Recovery (OPR)
✓	Initial Calibration (ICAL)	1	Certified Reference Material
✓	Calibration Verification (CCAL)	1	Field Replicates
✓	Continuing Calibration (CCAL)	✓	Target Analyte List
2	Laboratory Blanks	1	Reporting Limits
1	Field Blanks	2	Compound Identification
✓	Labeled Compound Recovery	✓	Compound Quantitation
2	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	1	Calculation Verification (Full Validation Only)

✓ Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

¹ Quality control results are discussed below, but no data were qualified.

² Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned EMPC-flags to values when a peak was detected but did not meet identification criteria. These values are considered as positive identifications which are “estimated maximum possible concentrations”. When these occurred in the method blank the results were evaluated. When these occurred in the associated samples, any EMPC values that were less than the action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. Various target analytes were detected in the method blanks, however only the following analytes required qualification in one or more samples:

For extraction batch, 50598, the following field sample results were qualified as not detected:

CLIENT ID	ANALYTE	QUALIFIER
SIB-SC-G08-3-4-07142022	PCB-18/30	U-MBL
	PCB-156/157	U-MBL
	PCB-167	U-MBL
	PCB-21/33	U-MBL
	PCB-1	U-MBL
SIB-SC-G08-4-5-07142022	PCB-18/30	U-MBL
	PCB-156/157	U-MBL
	PCB-20/28	U-MBL
	PCB-167	U-MBL
	PCB-21/33	U-MBL
	PCB-31	U-MBL
SIB-SC-G08-5-6-07142022	PCB-1	U-MBL
	PCB-18/30	U-MBL
	PCB-156/157	U-MBL
	PCB-20/28	U-MBL
	PCB-167	U-MBL
	PCB-21/33	U-MBL
	PCB-31	U-MBL
PCB-1	U-MBL	

Field Blanks

Equipment rinsate blanks associated with sediment cores were submitted separately from the associated field samples. Based on review of the table of equipment blank associations, equipment blanks EB02-07132022 and EB03-07202022 are associated with the samples with results reported in this SDG; results for these EBs were reported in CFA SDGs 20047 and 20081. Several results were detected in EB02-07132022, however; no data were qualified based on field blank contamination. EB03-07202022 was free from contamination.

Matrix Spikes/Matrix Spike Duplicates

For extraction batch, 50463, the matrix spike/matrix spike duplicate (MS/MSD) analyses were performed using Sample SIB-SC-D22-1-2-07/06/2022. No qualifiers were applied for instances when only the MS or MSD were outside acceptance criteria. The following outliers were noted:

Analyte	MS %R	MSD %R	RPD	Qualifier
PCB-105	12	658	128	J-MSLX,MSH,MSP
PCB-118	Parent > 4x Spike Conc.		122	J-MSP
PCB-114	--	152	32	J-MSH,MSP
PCB-156/157	--	262	78	J-MSH,MSP
PCB-167	--	201	59	J-MSH,MSP

Certified Reference Material

No certified reference materials were analyzed.

Field Replicates

No field duplicates were submitted.

Reporting Limits

The laboratory practical quantitation limits (PQL) were greater than those provided in the QAPP. Although some individual congeners were reported as not detected at elevated detection limits, the overall total PCB concentrations for most samples were greater than the site CUL.

Compound Identification

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were qualified (J-VJ).

For PCB-144, the following samples were flagged "Q" by the laboratory to indicate a shift in the retention times due to matrix interferences. The associated results were estimated (J-RTW).

SIB-SC-D19-2-3-07/19/2022	SIB-SC-D19-3-4-07/19/2022	SIB-SC-D19-4-5-07/19/2022
---------------------------	---------------------------	---------------------------

Calculation Verification (Full validation only)

Calculation verifications were performed on this SDG. No transcription or calculation errors were found.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. With the exceptions noted above, accuracy was acceptable as demonstrated by the labeled compound, LCS/LCSD, and MS/MSD recoveries. With the exceptions noted above, precision was also acceptable as reported by the LCS/LCSD and matrix spike/matrix spike duplicate RPD values.

Data were qualified as not detected due to method blank contamination. Data were qualified as not detected to indicate that EMPC values represent elevated detection limits. Data were also estimated due to retention time outliers as well as MS/MSD accuracy and precision outliers.

All data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r ² below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

QC Element	Reason Code	Definition
Low-Level Calibration Check	LLCH	Low-level calibration check above the upper limit
Low-Level Calibration Check	LLCL	Low-level calibration check below the lower limit
Low-Level Calibration Check	LLXL	Low-level calibration check below the lower limit, extreme discrepancy
Method Blank	MBH	Method blank result \geq LOQ
Method Blank	MBHB	Result is judged to be biased high based on associated method blank result
Method Blank	MBL	Method blank result $<$ LOQ
Matrix Spike	MSH	MS and/or MSD %R above acceptance criterion
Matrix Spike	MSL	MS and/or MSD %R below acceptance criterion
Matrix Spike	MSLX	MS and/or MSD %R below acceptance criterion, extreme discrepancy
Matrix Spike	MSP	MS/MSD RPD above acceptance criterion
Post-Digestion Spike	PDH	Post-digestion spike recovery high
Post-Digestion Spike	PDL	Post-digestion spike recovery low
Post-Digestion Spike	PDLX	Post-digestion spike recovery low, extreme discrepancy
Post-Digestion Spike	PDN	Post-digestion spike not performed or not applicable and serial dilution result not performed or not applicable
Sample Delivery and Condition	BUB	Bubbles $>$ 5 millimeters in volatile organic compounds vial
Sample Delivery and Condition	DAM	Sample container damaged
Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of compliance review (EPA Stage 2A) performed on sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Dioxins/Furans	E1613B	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, November 2020).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

Dioxin/Furan Compounds by EPA 1613B

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory and field quality control (QC) samples. All data received a compliance screening level of review (EPA Stage 2A). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES AND MATRIX	VALIDATION LEVEL
20075	30 Sediment	Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	1	Certified Reference Material
2	Laboratory Blanks	2	Field Duplicates
1	Field Blanks	✓	Target Analyte List
✓	Labeled Compound Recovery	✓	Reporting Limits
2	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	2	Compound Identification
✓	Laboratory Control Samples (LCS/LCSD)	2	Compound Quantitation

✓ Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

Sample identification (ID) date suffices were missing the "/" in the EDD as noted on the chains-of-custody (COC).

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned K-flags to values when a peak was detected but did not meet identification criteria. These values are considered positive identifications which are "estimated maximum possible concentrations" or EMPC. When these occurred in the method blank the results were evaluated as positive results. When these occurred in the associated samples, any EMPC values that were less than the method blank action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. Various target analytes were detected in the method blanks, however only the following analytes required qualification in one or more samples:

Extraction Batch 50710: The following field sample results were qualified as not detected:

CLIENT ID	ANALYTE	QUALIFIER
SIB-SC-E17-1-2-07192022	1,2,3,7,8-PeCDF	U-MBL
	2,3,7,8-TCDF	U-MBL
SIB-SC-E17-2-3-07192022	1,2,3,7,8-PeCDF	U-MBL
	1,2,3,7,8-PeCDD	U-MBL
	2,3,7,8-TCDF	U-MBL

SIB-SC-E20-6-7-07202022	1,2,3,7,8-PeCDF	U-MBL
	2,3,7,8-TCDF	U-MBL
SIB-SC-E20-7-8-07202022	1,2,3,7,8-PeCDF	U-MBL
	2,3,7,8-TCDF	U-MBL
SIB-SC-E20-8-9-07202022	1,2,3,7,8-PeCDF	U-MBL

	2,3,7,8-TCDF	U-MBL
SIB-SC-F25-4-5-07202022	1,2,3,4,7,8-HxCDD	U-MBL
	1,2,3,7,8-PeCDF	U-MBL
	2,3,7,8-TCDF	U-MBL
SIB-SC-F25-5-5.6-07202022	1,2,3,7,8-PeCDF	U-MBL

Extraction Batch 50773: The following field sample results were qualified as not detected:

CLIENT ID	ANALYTE	QUALIFIER
SIB-SC-E20-14-14.8-07/20/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
	OCDD	U-MBL

Field Blanks

No field blank samples were submitted with this SDG.

Matrix Spike/Matrix Spike Duplicate

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. Precision is evaluated using the relative percent difference (RPD) values calculated between the MS and MSD results. When the MS/MSD %R values indicate a potential low bias, associated results are estimated (J/UJ-MSL). Only the associated positive results are estimated (J-MSH) if the %R values indicate a potential high bias. Associated positive results are estimated (J-MSP) if the RPD values indicate uncertainty. No qualifiers are assigned for %R value outliers if the parent concentration is greater than 4x the spike concentration. Qualifiers are only issued to the parent sample.

For Extraction Batch 50710, the MS/MSD analyses were performed using Sample SIB-SC-E20-3-4-07/20/2022. The following qualifiers were assigned:

ANALYTE	MS %R	MSD %R	RPD	QUALIFIER
1,2,3,4,6,7,8-HpCDD	636	OK	114	J-MSH,MSP
1,2,3,4,7,8-HxCDF	OK	OK	25.3	J-MSP
1,2,3,4,6,7,8-HpCDF	275	OK	82.3	J-MSH,MSP
OCDF	298	OK	83.6	J-MSH,MSP
OCDD	Parent conc > 4x spike		140	J-MSP

For Extraction Batch 50771, the MS/MSD analyses were performed using Sample SIB-SC-E20-9-10-07/20/2022. The following qualifiers were assigned:

ANALYTE	MS %R	MSD %R	RPD	QUALIFIER
1,2,3,4,6,7,8-HpCDD	56	138	33.9	J-MSL,MSH,MSP
1,2,3,4,6,7,8-HpCDF	56	159	38.4	J-MSL,MSH,MSP
OCDF	OK	137	32.7	J-MSH,MSP
OCDD	Parent conc > 4x spike		52.9	J-MSP

Certified Reference Material

No certified reference materials were analyzed.

Field Duplicates

For sediment samples, the RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL.

One set of field replicates, SIB-SC-E20-12-13-07/20/2022 & FD-15-07/20/2022, was submitted. The difference value for Total HxCDD was greater than the control limit; the associated parent and field duplicate results were estimated (J-FDPA).

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF positive results when using the DB5 GC column for analysis. The DB5 column cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. Although the laboratory used a DB-5MS column which more adequately separates TCDF isomers, the laboratory still performed a second column confirmation on a DB-225 column when 2,3,7,8-TCDF was detected, and the concentration was greater than the reporting limit. Both sets of results were reported. The 2,3,7,8-TCDF results from the DB-5MS column were qualified do-not-report (DNR-EXC) in favor of the results from the DB-225 column.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. These results were K-flagged by the laboratory. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were qualified (J-VJ).

Compound Quantitation

The laboratory flagged sample results with an "E" flag indicating the sample results exceeded the calibrated linear range of the instrument. These results were estimated (J-ACR).

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. With the exceptions noted above, accuracy was acceptable, as demonstrated by the labeled compound, LCS/LCSD, and MS/MSD recoveries. With the exceptions noted above, precision was also acceptable as indicated by the LCS/LCSD, MS/MSD and field duplicate samples.

Data were qualified as not detected due to method blank contamination. Data were estimated to indicate that EMPC values are estimated maximum possible concentrations. Other data were estimated due to calibration range exceedances, MS/MSD accuracy and precision outliers, and a field duplicate precision outlier.

Data were flagged as do-not-report (DNR) to indicate which result (from multiple reported analyses) should not be used. Data that have been flagged DNR should not be used for any purpose.

All other data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)

Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r ² below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

QC Element	Reason Code	Definition
Low-Level Calibration Check	LLCH	Low-level calibration check above the upper limit
Low-Level Calibration Check	LLCL	Low-level calibration check below the lower limit
Low-Level Calibration Check	LLXL	Low-level calibration check below the lower limit, extreme discrepancy
Method Blank	MBH	Method blank result \geq LOQ
Method Blank	MBHB	Result is judged to be biased high based on associated method blank result
Method Blank	MBL	Method blank result $<$ LOQ
Matrix Spike	MSH	MS and/or MSD %R above acceptance criterion
Matrix Spike	MSL	MS and/or MSD %R below acceptance criterion
Matrix Spike	MSLX	MS and/or MSD %R below acceptance criterion, extreme discrepancy
Matrix Spike	MSP	MS/MSD RPD above acceptance criterion
Post-Digestion Spike	PDH	Post-digestion spike recovery high
Post-Digestion Spike	PDL	Post-digestion spike recovery low
Post-Digestion Spike	PDLX	Post-digestion spike recovery low, extreme discrepancy
Post-Digestion Spike	PDN	Post-digestion spike not performed or not applicable and serial dilution result not performed or not applicable
Sample Delivery and Condition	BUB	Bubbles $>$ 5 millimeters in volatile organic compounds vial
Sample Delivery and Condition	DAM	Sample container damaged
Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor

DATA VALIDATION REPORT

HGL – SWAN ISLAND BASIN

Prepared for:

HydroGeoLogic, Inc
11107 Sunset Hills Rd. Suite 400
Reston, VA 20190

Prepared by:

EcoChem, Inc.
500 Union Street, Suite 1010
Seattle, WA 98101

EcoChem Project: C28601-1

SDG: 20076

April 26, 2023

Approved for Release:

A handwritten signature in black ink, appearing to read "Michela Hernandez". The signature is written in a cursive style and is positioned above a horizontal line.

Michela Hernandez
Senior Project Chemist
EcoChem, Inc.

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of full review (EPA Stage 4) performed on sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
PCB Congeners	EPA 1668C	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, November 2020).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

PCB Congeners by EPA 1668C

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory quality control (QC) samples. All data received a full level of review (EPA Stage 4). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the Sample Index for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
20076	5 Sediment	Stage 4

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results were also verified (10% verification). Laboratory quality control sample results were not included in the EDD.

For "custom field 1", 2,3,3'6-tetrachlorobiphenol (59) should be listed as PCB-59/62/75. A comment was added to "custom field 2" to note this.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

✓	Sample Receipt, Preservation, and Holding Times	✓	Labeled Compound Recovery
✓	Initial Calibration (ICAL)	1	Certified Reference Material
✓	Calibration Verification (CCAL)	1	Field Duplicates
✓	Continuing Calibration (CCAL)	✓	Target Analyte List
2	Laboratory Blanks	1	Reporting Limits
1	Field Blanks	2	Compound Identification
✓	Laboratory Control Samples (LCS/LCSD)	✓	Compound Quantitation
1	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	1	Calculation Verification (Full Validation Only)

✓ *Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.*

¹ *Quality control results are discussed below, but no data were qualified.*

² *Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.*

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned EMPC-flags to values when a peak was detected but did not meet identification criteria. These values are considered as positive identifications which are "estimated maximum possible concentrations". When these occurred in the method blank, the results were evaluated. When these occurred in the associated samples, EMPC values that were less than the action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. Various target analytes were detected in the method blanks, however only the following analytes required qualification in one or more samples:

For extraction batch, 50598, the following field sample results were qualified as not detected:

Client ID	Analyte	Qualifier
SIB-SC-F25-3-4-07/20/2022	PCB-1	U-MBL
SIB-SC-F25-5-5.6-07/20/2022	PCB-1	U-MBL

Field Blanks

Equipment rinsate blanks associated with sediment cores were submitted separately from the associated field samples. Based on review of the table of equipment blank associations, equipment blank EB03-07202022 is associated with the samples with results reported in this SDG; results for this EB were reported in CFA SDG 20074. EB03-07202022 was free from all contamination.

Matrix Spikes/Matrix Spike Duplicates

No matrix spike/matrix spike duplicate (MS/MSD) analyses were reported with this data set. Accuracy and precision were evaluated using the laboratory control sample/laboratory control sample duplicate (LCS/LCSD) analyses.

Certified Reference Material

No certified reference materials were analyzed.

Field Replicates

No field duplicates were submitted.

Reporting Limits

High concentrations of target analytes necessitated changes to the standard extraction procedure by using smaller sample aliquots. This resulted in practical quantitation limits there were greater than those provided in the QAPP. Although some individual congeners were reported as not

detected at elevated detection limits, this did not impact data usability, as the overall total PCB concentrations were greater than site CULs and RALs.

Compound Identification

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were estimated (J-VJ).

The following results were flagged "Q" by the laboratory to indicate a shift in the retention times due to matrix interferences. These results were estimated (J-RTW).

Client ID	Analyte
SIB-SC-F25-2-3-07/20/2022	PCB-144
SIB-SC-F25-3-4-07/20/2022	PCB-144
SIB-SC-F25-4-5-07/20/2022	PCB-144
SIB-SC-F25-5-5.6-07/20/2022	PCB-144
	PCB-95

Calculation Verification

Calculation verifications were performed on this SDG. No transcription or calculation errors were noted.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. Accuracy was acceptable as demonstrated by the labeled compound and LCS/LCSD recoveries. Precision was also acceptable as reported by the LCS/LCSD relative percent difference (RPD) values.

Data were qualified as not detected due to method blank contamination. Data were estimated to indicate that EMPC values represent estimated maximum possible concentrations. Data were also estimated due to retention time outliers.

All data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r^2 below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

QC Element	Reason Code	Definition
Low-Level Calibration Check	LLCH	Low-level calibration check above the upper limit
Low-Level Calibration Check	LLCL	Low-level calibration check below the lower limit
Low-Level Calibration Check	LLXL	Low-level calibration check below the lower limit, extreme discrepancy
Method Blank	MBH	Method blank result \geq LOQ
Method Blank	MBHB	Result is judged to be biased high based on associated method blank result
Method Blank	MBL	Method blank result $<$ LOQ
Matrix Spike	MSH	MS and/or MSD %R above acceptance criterion
Matrix Spike	MSL	MS and/or MSD %R below acceptance criterion
Matrix Spike	MSLX	MS and/or MSD %R below acceptance criterion, extreme discrepancy
Matrix Spike	MSP	MS/MSD RPD above acceptance criterion
Post-Digestion Spike	PDH	Post-digestion spike recovery high
Post-Digestion Spike	PDL	Post-digestion spike recovery low
Post-Digestion Spike	PDLX	Post-digestion spike recovery low, extreme discrepancy
Post-Digestion Spike	PDN	Post-digestion spike not performed or not applicable and serial dilution result not performed or not applicable
Sample Delivery and Condition	BUB	Bubbles $>$ 5 millimeters in volatile organic compounds vial
Sample Delivery and Condition	DAM	Sample container damaged
Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor

DATA VALIDATION REPORT

HGL – SWAN ISLAND BASIN

Prepared for:

HydroGeoLogic, Inc
11107 Sunset Hills Rd. Suite 400
Reston, VA 20190

Prepared by:

EcoChem, Inc.
500 Union Street, Suite 1010
Seattle, WA 98101

EcoChem Project: C28601-1

SDG: 20101

February 16, 2023

Approved for Release:

A handwritten signature in black ink, appearing to read "Michela Hernandez". The signature is written in a cursive style and is positioned above a horizontal line.

Michela Hernandez
Senior Project Chemist
EcoChem, Inc.

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of compliance review (EPA Stage 2A) performed on sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Dioxins/Furans	E1613B	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, November 2022).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

Dioxin/Furan Compounds by EPA 1613B

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory and field quality control (QC) samples. All data received a compliance screening level of review (EPA Stage 2A). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES AND MATRIX	VALIDATION LEVEL
20101	17 Sediment	Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	1	Certified Reference Material
2	Laboratory Blanks	2	Field Duplicates
1	Field Blanks	✓	Target Analyte List
✓	Labeled Compound Recovery	✓	Reporting Limits
2	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	2	Compound Identification
✓	Laboratory Control Samples (LCS/LCSD)	2	Compound Quantitation

✓ Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

Sample identification (ID) date suffixes were missing the "/" in the EDD as noted on the chains-of-custody (COC).

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned K-flags to values when a peak was detected but did not meet identification criteria. These values are considered positive identifications which are "estimated maximum possible concentrations" or EMPC. When these occurred in the method blank the results were evaluated as positive results. When these occurred in the associated samples, any EMPC values that were less than the method blank action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. Various target analytes were detected in the method blanks, however only the following analytes required qualification in one or more samples:

The following field sample results were qualified as not detected:

CLIENT ID	ANALYTE	QUALIFIER
SIB-SC-F20-4-5-07/21/2022	2,3,4,6,7,8-HxCDF	U-MBL
	1,2,3,6,7,8-HxCDF	U-MBL
	1,2,3,7,8-PeCDF	U-MBL
SIB-SC-F20-5-6-07/21/2022	1,2,3,4,7,8-HxCDF	U-MBL
	1,2,3,6,7,8-HxCDF	U-MBL
	2,3,4,6,7,8-HxCDF	U-MBL
	1,2,3,7,8-PeCDF	U-MBL
SIB-SC-F18-4-5-07/21/2022	1,2,3,7,8-PeCDF	U-MBL
SIB-SC-F18-5-6-07/21/2022	1,2,3,7,8-PeCDF	U-MBL
SIB-SC-B09-0-1-07/22/2022	1,2,3,4,7,8-HxCDF	U-MBL
	1,2,3,4,6,7,8-HpCDF	U-MBL

	1,2,3,6,7,8-HxCDF	U-MBL
	1,2,3,7,8-PeCDF	U-MBL
SIB-SC-B09-5-6-07/22/2022	1,2,3,4,7,8-HxCDF	U-MBL

Field Blanks

No field blank samples were submitted with this SDG.

Matrix Spike/Matrix Spike Duplicate

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. Precision is evaluated using the relative percent difference (RPD) values calculated between the MS and MSD results. When the MS/MSD %R values indicate a potential low bias, associated results are estimated (J/UJ-MSL). Only the associated positive results are estimated (J-MSH) if the %R values indicate a potential high bias. Associated positive results are estimated (J-MSP) if the RPD values indicate uncertainty. No qualifiers are assigned for %R value outliers if the parent concentration is greater than 4x the spike concentration. Qualifiers are only issued to the parent sample.

MS/MSD analyses were performed using Sample SIB-SC-F18-2-3-07/21/2022. The following qualifiers were assigned:

ANALYTE	MS %R	MSD %R	RPD	QUALIFIER
2,3,7,8-TCDF	66	64.4	OK	J-MSL
1,2,3,4,6,7,8-HpCDF	-27.2	-51.4	OK	J-MSLX
OCDF	-93.5	-156	36.8	J-MSLX,MSP
1,2,3,4,6,7,8-HpCDD	Parent > 4x Spike		38.6	J-MSP
OCDD	Parent > 4x Spike		57.9	J-MSP

Certified Reference Material

No certified reference materials were analyzed.

Field Duplicates

For sediment samples, the RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL.

One set of field replicates, SIB-SC-F18-1-2-07/21/2022 & FD-16-07/21/2022, was submitted. The following outliers resulted in qualification:

ANALYTE	OUTLIER TYPE	QUALIFIER
1,2,3,4,6,7,8-HpCDF	RPD	J-FDPR
1,2,3,4,6,7,8-HpCDD	RPD	J-FDPR
1,2,3,6,7,8-HxCDD	Difference	J-FDPA
OCDF	RPD	J-FDPR
OCDD	RPD	J-FDPR
Total HpCDD	RPD	J-FDPR
Total HxCDF	RPD	J-FDPR
Total HxCDD	RPD	J-FDPR
Total HpCDF	RPD	J-FDPR
Total PeCDF	RPD	J-FDPR
Total PeCDD	Difference	J-FDPA
Total TCDF	RPD	J-FDPR
Total TCDD	Difference	J-FDPA

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF positive results when using the DB5 GC column for analysis. The DB5 column cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. Although the laboratory used a DB-5MS column which more adequately separates TCDF isomers, the laboratory still performed a second column confirmation on a DB-225 column when 2,3,7,8-TCDF was detected, and the concentration was greater than the reporting limit. Both sets of results were reported. The 2,3,7,8-TCDF results from the DB-5MS column were qualified do-not-report (DNR-EXC) in favor of the results from the DB-225 column.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. These results were K-flagged by the laboratory. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were qualified (J-VJ).

Compound Quantitation

The laboratory flagged sample results with an "E" flag indicating the sample results exceeded the calibrated linear range of the instrument. These results were estimated (J-ACR).

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. With the exceptions noted above, accuracy was acceptable, as demonstrated by the LCS/LCSD, labeled compound, and MS/MSD recoveries. With the exceptions noted above, precision was also acceptable as indicated by the LCS/LCSD, MS/MSD and field duplicate RPDs.

Data were qualified as not detected due to method blank contamination. Data were estimated to indicate that EMPC values are estimated maximum possible concentrations. Data were also estimated due to MS/MSD accuracy and precision outliers as well as calibration range exceedances and field duplicate precision outliers.

Data were flagged as do-not-report (DNR) to indicate which result from multiple reported analyses should not be used. Data that have been flagged DNR should not be used for any purpose.

All other data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r ² below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3

	Next Review Date: June 2023

QC Element	Reason Code	Definition
Low-Level Calibration Check	LLCH	Low-level calibration check above the upper limit
Low-Level Calibration Check	LLCL	Low-level calibration check below the lower limit
Low-Level Calibration Check	LLXL	Low-level calibration check below the lower limit, extreme discrepancy
Method Blank	MBH	Method blank result \geq LOQ
Method Blank	MBHB	Result is judged to be biased high based on associated method blank result
Method Blank	MBL	Method blank result $<$ LOQ
Matrix Spike	MSH	MS and/or MSD %R above acceptance criterion
Matrix Spike	MSL	MS and/or MSD %R below acceptance criterion
Matrix Spike	MSLX	MS and/or MSD %R below acceptance criterion, extreme discrepancy
Matrix Spike	MSP	MS/MSD RPD above acceptance criterion
Post-Digestion Spike	PDH	Post-digestion spike recovery high
Post-Digestion Spike	PDL	Post-digestion spike recovery low
Post-Digestion Spike	PDLX	Post-digestion spike recovery low, extreme discrepancy
Post-Digestion Spike	PDN	Post-digestion spike not performed or not applicable and serial dilution result not performed or not applicable
Sample Delivery and Condition	BUB	Bubbles $>$ 5 millimeters in volatile organic compounds vial
Sample Delivery and Condition	DAM	Sample container damaged
Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor

DATA VALIDATION REPORT

HGL – SWAN ISLAND BASIN

Prepared for:

HydroGeoLogic, Inc
11107 Sunset Hills Rd. Suite 400
Reston, VA 20190

Prepared by:

EcoChem, Inc.
500 Union Street, Suite 1010
Seattle, WA 98101

EcoChem Project: C28601-1

SDG: 20102

February 16, 2023

Approved for Release:

A handwritten signature in black ink, appearing to read "Michela Hernandez". The signature is written in a cursive style and is positioned above a horizontal line.

Michela Hernandez
Senior Project Chemist
EcoChem, Inc.

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of compliance review (EPA Stage 2A) performed on sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Dioxins/Furans	E1613B	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, November 2020).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

Dioxin/Furan Compounds by EPA 1613B

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory and field quality control (QC) samples. All data received a compliance screening level of review (EPA Stage 2A). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES AND MATRIX	VALIDATION LEVEL
20102	19 Sediment	Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table.

✓	Sample Receipt, Preservation, and Holding Times	1	Certified Reference Material
2	Laboratory Blanks	2	Field Duplicates
1	Field Blanks	✓	Target Analyte List
✓	Labeled Compound Recovery	✓	Reporting Limits
2	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	2	Compound Identification
✓	Laboratory Control Samples (LCS/LCSD)	2	Compound Quantitation

✓ Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned K-flags to values when a peak was detected but did not meet identification criteria. These values are considered positive identifications which are "estimated maximum possible concentrations" or EMPC. When these occurred in the method blank the results were evaluated as positive results. When these occurred in the associated samples, any EMPC values that were less than the method blank action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. Various target analytes were detected in the method blanks, however only the following analytes required qualification in one or more samples:

Extraction Batch 50929: The following field sample results were qualified as not detected:

CLIENT ID	ANALYTE	QUALIFIER
SIB-SC-C25-2-3-07/23/2022	1,2,3,7,8-PECDF	U-MBL
	1,2,3,7,8,9-HXCDF	U-MBL
SIB-SC-E24-3-4-07/23/2022	1,2,3,7,8-PECDF	U-MBL
SIB-SC-E24-4-5-07/23/2022	1,2,3,7,8-PECDF	U-MBL
	1,2,3,6,7,8-HXCDF	U-MBL
	1,2,3,7,8,9-HXCDF	U-MBL
	2,3,4,6,7,8-HXCDF	U-MBL
SIB-SC-E25-2-3-07/23/2022	1,2,3,7,8-PECDF	U-MBL
	1,2,3,7,8,9-HXCDF	U-MBL
SIB-SC-E25-5-6-07/23/2022	1,2,3,7,8-PECDF	U-MBL
	1,2,3,7,8,9-HXCDF	U-MBL

Extraction Batch 51081: The following field sample results were qualified as not detected:

CLIENT ID	ANALYTE	QUALIFIER
SIB-SC-E24-3-4-07/23/2022	1,2,3,7,8-PECDF	U-MBL

Field Blanks

No field blank samples were submitted with this SDG.

Matrix Spike/Matrix Spike Duplicate

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. Precision is evaluated using the relative percent difference (RPD) values calculated between the MS and MSD results. When the MS/MSD %R values indicate a potential low bias, associated results are estimated (J/UJ-MSL). Only the associated positive results are estimated (J-MSH) if the %R values indicate a potential high bias. Associated positive results are estimated (J-MSP) if the RPD values indicate uncertainty. No qualifiers are assigned for %R value outliers if the parent concentration is greater than 4x the spike concentration. Qualifiers are only issued to the parent sample.

For Extraction Batch 50929, the MS/MSD analyses were performed using Sample SIB-SC-C25-0-1-07/23/2022.

ANALYTE	MS %R	MSD %R	RPD	QUALIFIER
1,2,3,4,6,7,8-HpCDD	OK	-163	51.0	J-MSLX,MSP
1,2,3,4,6,7,8-HpCDF	OK	-957	57.2	J-MSLX,MSP
OCDD	OK	34.7	35.4	J-MSL,MSP
OCDF	OK	5.53	39.1	J-MSLX,MSP

For Extraction Batch 51078, results for Batch MS/MSD analyses were not submitted in this SDG. No action was taken since the parent sample was from another SDG. Accuracy and precision were evaluated using the LCS/LCSD.

Certified Reference Material

No certified reference materials were analyzed.

Field Duplicates

For sediment samples, the RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL.

One set of field replicates, SIB-SC-C25-1-2-07/23/2022 & FD-10-07/23/2022, was submitted. The following outliers resulted in qualification:

ANALYTE	OUTLIER TYPE	QUALIFIER
1,2,3,4,6,7,8-HpCDF	RPD	J-FDPR
1,2,3,4,6,7,8-HpCDD	RPD	J-FDPR
1,2,3,6,7,8-HxCDD	Difference	J-FDPA
2,3,7,8-TCDF	Difference	J-FDPA
OCDF	RPD	J-FDPR
OCDD	RPD	J-FDPR
Total HpCDF	RPD	J-FDPR
Total HpCDD	RPD	J-FDPR
Total HxCDF	RPD	J-FDPR
Total HxCDD	RPD	J-FDPR

ANALYTE	OUTLIER TYPE	QUALIFIER
Total PeCDF	RPD	J-FDPR
Total PeCDD	Difference	J-FDPA
Total TCDF	RPD	J-FDPR
Total TCDD	Difference	J-FDPA

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF positive results when using the DB5 GC column for analysis. The DB5 column cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. Although the laboratory used a DB-5MS column which more adequately separates TCDF isomers, the laboratory still performed a second column confirmation on a DB-225 column when 2,3,7,8-TCDF was detected, and the concentration was greater than the reporting limit. Both sets of results were reported. The 2,3,7,8-TCDF results from the DB-5MS column were qualified do-not-report (DNR-EXC) in favor of the results from the DB-225 column.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. These results were K-flagged by the laboratory. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were qualified (J-VJ).

Compound Quantitation

The laboratory flagged sample results with an "E" flag indicating the sample results exceeded the calibrated linear range of the instrument. These results were estimated (J-ACR).

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. With the exceptions noted above, accuracy was acceptable, as demonstrated by the LCS/LCSD, labeled compound, and MS/MSD recoveries. With the exceptions noted above, precision was also acceptable as indicated by the LCS/LCSD, MS/MSD, and field duplicate RPDs.

Data were qualified as not detected due to method blank contamination. Data were estimated to indicate that EMPC values are estimated maximum possible concentrations. Data were also estimated due to MS/MSD precision outliers as well as calibration range exceedances and field duplicate precision outliers.

Data were flagged as do-not-report (DNR) to indicate which result from multiple reported analyses should not be used. Data that have been flagged DNR should not be used for any purpose.

All other data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r ² below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

QC Element	Reason Code	Definition
Low-Level Calibration Check	LLCH	Low-level calibration check above the upper limit
Low-Level Calibration Check	LLCL	Low-level calibration check below the lower limit
Low-Level Calibration Check	LLXL	Low-level calibration check below the lower limit, extreme discrepancy
Method Blank	MBH	Method blank result \geq LOQ
Method Blank	MBHB	Result is judged to be biased high based on associated method blank result
Method Blank	MBL	Method blank result $<$ LOQ
Matrix Spike	MSH	MS and/or MSD %R above acceptance criterion
Matrix Spike	MSL	MS and/or MSD %R below acceptance criterion
Matrix Spike	MSLX	MS and/or MSD %R below acceptance criterion, extreme discrepancy
Matrix Spike	MSP	MS/MSD RPD above acceptance criterion
Post-Digestion Spike	PDH	Post-digestion spike recovery high
Post-Digestion Spike	PDL	Post-digestion spike recovery low
Post-Digestion Spike	PDLX	Post-digestion spike recovery low, extreme discrepancy
Post-Digestion Spike	PDN	Post-digestion spike not performed or not applicable and serial dilution result not performed or not applicable
Sample Delivery and Condition	BUB	Bubbles $>$ 5 millimeters in volatile organic compounds vial
Sample Delivery and Condition	DAM	Sample container damaged
Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor

DATA VALIDATION REPORT

HGL – SWAN ISLAND BASIN

Prepared for:

HydroGeoLogic, Inc
11107 Sunset Hills Rd. Suite 400
Reston, VA 20190

Prepared by:

EcoChem, Inc.
500 Union Street, Suite 1010
Seattle, WA 98101

EcoChem Project: C28601-1

SDG: 20103

February 17, 2023

Approved for Release:

A handwritten signature in black ink, appearing to read "Michela Hernandez". The signature is written in a cursive style and is positioned above a horizontal line.

Michela Hernandez
Senior Project Chemist
EcoChem, Inc.

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of compliance review (EPA Stage 2A) performed on sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Dioxins/Furans	E1613B	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, November 2022).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

Dioxin/Furan Compounds by EPA 1613B

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory and field quality control (QC) samples. All data received a compliance screening level of review (EPA Stage 2A). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the **Sample Index** for a complete list of samples.

SDG	NUMBER OF SAMPLES AND MATRIX	VALIDATION LEVEL
20103	20 Sediment	Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table.

✓	Sample Receipt, Preservation, and Holding Times	1	Certified Reference Material
2	Laboratory Blanks	2	Field Duplicates
1	Field Blanks	✓	Target Analyte List
✓	Labeled Compound Recovery	✓	Reporting Limits
2	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	2	Compound Identification
✓	Laboratory Control Samples (LCS/LCSD)	2	Compound Quantitation

✓ Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned K-flags to values when a peak was detected but did not meet identification criteria. These values are considered positive identifications which are "estimated maximum possible concentrations" or EMPC. When these occurred in the method blank the results were evaluated as positive results. When these occurred in the associated samples, any EMPC values that were less than the method blank action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. Various target analytes were detected in the method blanks, however only the following analytes required qualification in one or more samples:

The following field sample results were qualified as not detected:

CLIENT ID	ANALYTE	QUALIFIER
SIB-SC-F21-4-5-07/24/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
	OCDF	U-MBL
SIB-SC-F21-5-6-07/24/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
SIB-SC-C10-3-4-07/24/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
SIB-SC-C10-4-5-07/24/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
	OCDF	U-MBL
SIB-SC-C10-5-6-07/24/2022	1,2,3,4,6,7,8-HpCDF	U-MBL
	OCDF	U-MBL

Field Blanks

No field blank samples were submitted with this SDG.

Matrix Spike/Matrix Spike Duplicate

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. Precision is evaluated using the relative percent difference (RPD) values calculated between the MS and MSD results. When the MS/MSD %R values indicate a potential low bias, associated results are estimated (J/UJ-MSL). Only the associated positive results are estimated (J-MSH) if the %R values indicate a potential high bias. Associated positive results are estimated (J-MSP) if the RPD values indicate uncertainty. No qualifiers are assigned for %R value outliers if the parent concentration is greater than 4x the spike concentration. Qualifiers are only issued to the parent sample.

MS/MSD analyses were performed using Sample SIB-SC-F21-2-3-07/24/2022. The following qualifiers were assigned:

ANALYTE	MS %R	MSD %R	RPD	QUALIFIER
1,2,3,4,6,7,8-HpCDD	853	524	37.7	J-MSH,MSP
1,2,3,4,7,8-HxCDF	150	138	OK	J-MSH
1,2,3,4,6,7,8-HpCDF	351	299	OK	J-MSH
OCDF	547	505	OK	J-MSH
OCDD	Parent > 4x Spike		34.8	J-MSP

Certified Reference Material

No certified reference materials were analyzed.

Field Duplicates

For sediment samples, the RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL.

One set of field replicates, SIB-SC-F21-1-2-07/24/2022 & FD-12-07/24/2022, was submitted. The following outliers resulted in qualification:

ANALYTE	OUTLIER TYPE	QUALIFIER
1,2,3,4,6,7,8-HpCDF	RPD	J-FDPR
1,2,3,4,6,7,8-HpCDD	RPD	J-FDPR
1,2,3,4,7,8,9-HpCDF	RPD	J-FDPR
1,2,3,4,7,8-HxCDF	RPD	J-FDPR
1,2,3,6,7,8-HxCDF	Difference	J-FDPA
1,2,3,6,7,8-HxCDD	Difference	J-FDPA
1,2,3,7,8,9-HxCDF	Difference	J-FDPA
2,3,4,6,7,8-HxCDF	Difference	J-FDPA
OCDF	RPD	J-FDPR
OCDD	RPD	J-FDPR
Total HpCDF	RPD	J-FDPR
Total HpCDD	RPD	J-FDPR
Total HxCDF	Difference	J-FDPR
Total HxCDD	RPD	J-FDPR
Total PeCDF	RPD	J-FDPR
Total PeCDD	Difference	J-FDPA
Total TCDF	Difference	J-FDPA
Total TCDD	Difference	J-FDPA

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF positive results when using the DB5 GC column for analysis. The DB5 column cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. Although the laboratory used a DB-5MS column which more adequately separates TCDF isomers, the laboratory still performed a second column confirmation on a DB-225

column when 2,3,7,8-TCDF was detected, and the concentration was greater than the reporting limit. Both sets of results were reported. The 2,3,7,8-TCDF results from the DB-5MS column were qualified do-not-report (DNR-EXC) in favor of the results from the DB-225 column.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. These results were K-flagged by the laboratory. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were qualified (J-VJ).

Compound Quantitation

The laboratory flagged sample results with an "E" flag indicating the sample results exceeded the calibrated linear range of the instrument. These results were estimated (J-ACR).

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. With the exceptions noted above, accuracy was acceptable, as demonstrated by the LCS/LCSD, labeled compound, and MS/MSD recoveries. With the exceptions noted above, precision was also acceptable as indicated by the LCS/LCSD, MS/MSD and field duplicate RPDs.

Data were qualified as not detected due to method blank contamination. Data were estimated to indicate that EMPC values are estimated maximum possible concentrations. Data were also estimated due to MS/MSD accuracy and precision outliers as well as calibration range exceedances and field duplicate precision outliers.

Data were flagged as do-not-report (DNR) to indicate which result from multiple reported analyses should not be used. Data that have been flagged DNR should not be used for any purpose.

All other data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r ² below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

DATA VALIDATION REPORT

HGL – SWAN ISLAND BASIN

Prepared for:

HydroGeoLogic, Inc
11107 Sunset Hills Rd. Suite 400
Reston, VA 20190

Prepared by:

EcoChem, Inc.
500 Union Street, Suite 1010
Seattle, WA 98101

EcoChem Project: C28601-1

SDG: 20104

April 26, 2023

Approved for Release:

A handwritten signature in black ink, appearing to read "Michela Hernandez". The signature is written in a cursive style and is positioned above a horizontal line.

Michela Hernandez
Senior Project Chemist
EcoChem, Inc.

PROJECT NARRATIVE

Basis for the Data Validation

This report summarizes the results of compliance review (EPA Stage 2A) performed on sediment and quality control sample data for the Swan Island Basin project. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed in the following table:

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
PCB Congeners	EPA 1668C	E. Clayton	A. Bodkin

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Uniform Federal Policy Quality Assurance Project Plan Revision 3, Remedial Design Services Swan Island Basin Project Area* (HGL, Pacific Groundwater Group, Mott MacDonald and Bridgewater Group, May 2022); *National Functional Guidelines for High Resolution Superfund Methods Data Review* (USEPA, November 2020).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned a DNR flag (do-not-report) or are rejected (R), the data should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced above.

Data qualifier definitions and reason codes are included as **Appendix A**. A Qualified Data Summary Table is included in **Appendix B**. Data Validation Worksheets and project associated communications will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT

HGL – Swan Island Basin

PCB Congeners by EPA 1668C

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory and field quality control (QC) samples. All data received a compliance screening level of review (EPA Stage 2A). The samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the Sample Index for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
20104	19 Sediment	Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Sample results and laboratory QC were also verified (10% verification).

For "custom field 1", 2,3,3'6-tetrachlorobiphenol (59) should be listed as PCB-59/62/75. A comment was added to "custom field 2" to note this.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

✓	Sample Receipt, Preservation, and Holding Times	1	Certified Reference Material
2	Laboratory Blanks	2	Field Duplicates
1	Field Blanks	✓	Target Analyte List
✓	Labeled Compound Recovery	1	Reporting Limits
✓	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	2	Compound Identification
✓	Laboratory Control Samples (LCS/LCSD)	✓	Compound Quantitation
1	Certified Reference Material		

✓ Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

¹ *Quality control results are discussed below, but no data were qualified.*

² *Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.*

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported

in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned EMPC-flags to values when a peak was detected but did not meet identification criteria. These values are considered as positive identifications which are "estimated maximum possible concentrations". When these occurred in the method blank, the results were evaluated. When these occurred in the associated samples, EMPC values that were less than the action level were qualified as not detected (U).

Method blanks were analyzed at the appropriate frequency. Various target analytes were detected in the method blanks, however only the following analytes required qualification in one or more samples:

The following field sample results were qualified as not detected:

Client ID	Analyte	Qualifier
SIB-SC-B09-0-1-07/22/2022	PCB-11	U-MBL
	PCB-31	U-MBL
	PCB-105	U-MBL

	PCB-167	U-MBL
	PCB-156/157	U-MBL

Field Blanks

Equipment rinsate blanks associated with sediment cores were submitted separately from the associated field samples. Based on review of the table of equipment blank associations, equipment blank EB04-07212022 is associated with the samples with results reported in this SDG; results for this EB were reported in CFA SDG 20081. EB04-07212022 was free from all contamination.

Certified Reference Material

No certified reference materials were analyzed.

Field Duplicates

For sediment samples, the relative percent difference (RPD) control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and duplicate must be less than 2x the RL.

Samples SIB-SC-C25-1-2-07/23/2022 & FD-10-07/23/2022 were submitted as field duplicates. The following outliers were noted:

ANALYTE	OUTLIER TYPE	QUALIFIER
PCB-25	Difference	J-FDPA
PCB-82	Difference	J-FDPA
PCB-105	RPD	J-FDPR
PCB-118	RPD	J-FDPR
PCB-158	Difference	J-FDPA
PCB-164	Difference	J-FDPA
PCB-26/29	Difference	J-FDPA
PCB-86/87/97/109/119/125	Difference	J-FDPA
PCB-128/166	Difference	J-FDPA

Reporting Limits

High concentrations of target analytes necessitated changes to the standard extraction procedure by using smaller sample aliquots. This resulted in practical quantitation limits there were greater than those provided in the QAPP. Although some individual congeners were reported as not detected at elevated detection limits, this did not impact data usability, as the overall total PCB concentrations for most samples were greater than site CULs and RALs.

Sample SIB-SC-C05-1-2-07/24/2022 was analyzed at a 5X dilution due to concentrations that exceeded the calibration range of the instrument.

Compound Identification

For several samples, the laboratory reported EMPC or "estimated maximum possible concentrations" values for one or more of the target analytes. An EMPC value is reported when a peak was detected and met all identification criteria, as required by the method, except the ion abundance ratio criteria; therefore, the result is considered an estimated positive result for the analyte. To indicate that the reported result for an individual analyte is an estimated result, the EMPC values were estimated (J-VJ).

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory performed an acceptable modification of the specified analytical method. Accuracy was acceptable as demonstrated by the labeled compound, LCS/LCSD, and MS/MSD recoveries. With the exceptions noted above, precision was also acceptable as demonstrated by the LCS/LCSD, matrix spike/matrix spike duplicate, and field duplicate RPD values.

Data were qualified as not detected due to method blank contamination. Data were estimated to indicate that EMPC values are estimated maximum possible concentrations. Data were also estimated due to field duplicate precision outliers.

All data, as qualified, are acceptable for use.

APPENDIX A

DATA QUALIFIER DEFINITIONS AND REASON CODES

DATA VALIDATION QUALIFIER CODES

Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

ATTACHMENT E

Data Qualification Reason Codes

QC Element	Reason Code	Definition
Ambient Blank	ABH	Ambient blank result \geq limit of quantitation (LOQ)
Ambient Blank	ABHB	Result is judged to be biased high based on associated ambient blank result
Ambient Blank	ABL	Ambient blank result $<$ LOQ
Analyte Quantitation	ACR	Result above the upper end of the calibrated range
Analyte Quantitation	EXC	Result excluded; another data point for this analyte was selected for use (use with X-qualified results)
Analyte Quantitation	RTW	Target analyte outside retention time window
Analyte Quantitation	PSL	Solid matrix sample with percent solids less than 50%
Analyte Quantitation	PSLX	Solid matrix sample with percent solids less than 10%
Analyte Quantitation	TR	Result between the detection limit and LOQ
Calibration Blank	CBH	Initial or continuing calibration blank result \geq LOQ
Calibration Blank	CBHB	Result is judged to be biased high based on associated continuing calibration blank result
Calibration Blank	CBL	Initial or continuing calibration blank result $<$ LOQ
Calibration Blank	CBN	Negative initial or continuing calibration blank result with absolute value $<$ LOQ
Calibration Blank	CBNH	Negative initial or continuing calibration blank result with absolute value \geq LOQ
Continuing Calibration	CCCC	Calibration check compound did not meet percent difference (%D) criterion in continuing calibration standard
Continuing Calibration	CCVD	Continuing calibration standard did not meet %D criterion
Continuing Calibration	CRFL	Continuing calibration RRF below acceptance criterion
Continuing Calibration	CSPC	System performance check compound did not meet minimum RRF criterion in continuing calibration
Continuing Calibration	CVDX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Confirmation	CF	Confirmation precision exceeded acceptance criterion
Cyanide Method	DSH	High-level distillation standard did not meet %D criterion
Cyanide Method	DSL	Low-level distillation standard did not meet %D criterion
Equipment Blank	EBH	Equipment blank result \geq LOQ
Equipment Blank	EBHB	Result is judged to be biased high based on associated equipment blank result
Equipment Blank	EBL	Equipment blank result $<$ LOQ
Field Duplicate	FDPA	Field duplicate results did not meet absolute difference criterion
Field Duplicate	FDPR	Field duplicate results did not meet RPD criterion
Holding Time	HTA	Analytical holding time exceeded
Holding Time	HTAX	Analytical holding time exceeded, extreme discrepancy
Holding Time	HTP	Preparation holding time exceeded
Holding Time	HTPX	Preparation holding time exceeded, extreme discrepancy
Initial Calibration	ICCC	Calibration check compound did not meet percent relative standard deviation (%RSD) criterion in initial calibration

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)

**ATTACHMENT E (continued)
Data Qualification Reason Codes**

QC Element	Reason Code	Definition
Initial Calibration	ICLS	Initial calibration low-level standard >LOQ
Initial Calibration	ICR2	Initial calibration r ² below acceptance criterion
Initial Calibration	ICRD	Initial calibration %RSD above acceptance criterion
Initial Calibration	ICRX	Initial calibration %RSD above acceptance criterion, extreme discrepancy
Initial Calibration	IRFL	Initial calibration RRF below acceptance criterion
Initial Calibration	ISPC	System performance check compound did not meet minimum mean RRF criterion in initial calibration
Initial Calibration	LQSH	LOQ check standard above acceptance criteria
Initial Calibration	LQSL	LOQ check standard below acceptance criteria
Initial Calibration	SSVD	Second-source standard did not meet %D criterion
Initial Calibration Verification	ICVD	Continuing calibration standard did not meet %D criterion
Initial Calibration Verification	ICVX	Continuing calibration standard did not meet %D criterion, extreme discrepancy
Interference Check Standard	ICAH	Non-spiked concentration above acceptance criterion in ICSA
Interference Check Standard	ICAN	Negative concentration with absolute value above acceptance criterion in ICSA
Interference Check Standard	ICHX	Non-spiked concentration above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICNX	Negative concentration with absolute value above acceptance criterion in ICSA, extreme discrepancy
Interference Check Standard	ICSH	ICSA or ICSAB spiked analyte with high percent recovery (%R)
Interference Check Standard	ICSL	ICSA or ICSAB spiked analyte with low %R
Internal Standards	IRH	Internal standard peak area above upper limit
Internal Standards	IRL	Internal standard peak area below lower limit
Internal Standards	IRLX	Internal standard peak area below lower limit, extreme discrepancy
Internal Standards	ISRT	Internal standard retention time outside window
Labeled Standards	LSH	Labeled standard %R above acceptance criterion
Labeled Standards	LSL	Labeled standard %R below acceptance criterion
Labeled Standards	LSLX	Labeled standard %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCLX	LCS and/or LCSD %R below acceptance criterion, extreme discrepancy
Laboratory Control Sample	LCSH	LCS and/or LCSD %R above acceptance criterion
Laboratory Control Sample	LCSL	LCS and/or LCSD %R below acceptance criterion
Laboratory Control Sample	LCSP	LCS/LCSD RPD above acceptance criterion
Laboratory Duplicate	LDPA	Laboratory duplicate results did not meet absolute difference criterion
Laboratory Duplicate	LDPR	Laboratory duplicate results did not meet RPD criterion

Data Validation, U.S. EPA/DoD Stage 2A and Stage 2B	Document No.: HGL SOP 412.501 (formerly 4.09)
	Process Category: Services
	Revision No.: 3
	Last Review Date: June 15, 2021
	Next Review Date: June 2023

QC Element	Reason Code	Definition
Low-Level Calibration Check	LLCH	Low-level calibration check above the upper limit
Low-Level Calibration Check	LLCL	Low-level calibration check below the lower limit
Low-Level Calibration Check	LLXL	Low-level calibration check below the lower limit, extreme discrepancy
Method Blank	MBH	Method blank result \geq LOQ
Method Blank	MBHB	Result is judged to be biased high based on associated method blank result
Method Blank	MBL	Method blank result $<$ LOQ
Matrix Spike	MSH	MS and/or MSD %R above acceptance criterion
Matrix Spike	MSL	MS and/or MSD %R below acceptance criterion
Matrix Spike	MSLX	MS and/or MSD %R below acceptance criterion, extreme discrepancy
Matrix Spike	MSP	MS/MSD RPD above acceptance criterion
Post-Digestion Spike	PDH	Post-digestion spike recovery high
Post-Digestion Spike	PDL	Post-digestion spike recovery low
Post-Digestion Spike	PDLX	Post-digestion spike recovery low, extreme discrepancy
Post-Digestion Spike	PDN	Post-digestion spike not performed or not applicable and serial dilution result not performed or not applicable
Sample Delivery and Condition	BUB	Bubbles $>$ 5 millimeters in volatile organic compounds vial
Sample Delivery and Condition	DAM	Sample container damaged
Sample Delivery and Condition	PRE	Sample not properly preserved
Sample Delivery and Condition	TEMP	Sample received at elevated temperature
Sample Delivery and Condition	TMPX	Sample received at elevated temperature, extreme discrepancy
Serial Dilution	SDIL	Serial dilution did not meet %D criterion
Serial Dilution	SDN	Serial dilution not performed
Surrogate	SSH	Surrogate %R high
Surrogate	SSL	Surrogate %R low
Surrogate	SSLX	Surrogate %R low, extreme discrepancy
Surrogate	SSN	Surrogate compound not spiked into sample
Trip Blank	TBH	Trip blank result \geq LOQ
Trip Blank	TBL	Trip blank result $<$ LOQ
Validator Judgment	VJ	Validator judgment (see validation narrative)

ICS = interference check sample
 MS = matrix spike
 MSD = matrix spike duplicate
 QC = quality control
 RPD = relative percent difference
 RRF = relative response factor
