Total Concentrations were calculated using 1/2 of value for non-detects.
Only the highest exceedance category is marked with an x.
& = and
< = less than
> = greater than
µg/kg = micrograms per kilogram
ft = feet
mg/kg = milligrams per kilogram
pg/g = picograms per gram
1,2,3,4,7,8-HxCDF = 1,2,3,4,7,8-hexachlorodibenzofuran
4-PeCDF = 2,3,4,7,8-pentachlorodibenzofuran
BEHP = bis(2-ethylhexyl)phthalate
CUL = cleanup level
NA = Not Applicable/Not Available
O/P = organochlorine pesticides
PAHs = polycyclic aromatic hydrocarbons
PCDD = 1,2,3,7,8-pentachlorodibenzo-p-dioxin
PCDD = 1,2,3,7,8-pentachlorodibenzo-p-dioxin
PCDFs = polychlorinated dibenzofurans
PQL = practical quantitation limit
PTW = principal threat waste
RAL = remedial action level
sVOC = Semi-volatile organic compounds
TCDD = 2,3,7,8-tetrachlorodibenzo-p-dioxin
TCDF = 2,3,7,8-tetrachlorodibenzofuran
TEQ = toxic equivalent
TPH = total petroleum hydrocarbons

Physical Shoreline Inspection Form
SIB Project Area, Portland Harbor Superfund Site

This field form was developed from the *Guidance for River Bank Characterizations and Evaluations at the Portland Harbor Superfund Site* (USEPA, 2019) (Guidance). An assessment using this form must be completed for each geomorphic area or segment of the river bank with different physical and material characteristics because of the unique potential for erodibility each segment possesses. For further detail regarding Physical Shoreline Inspection requirements, please refer to Section 2.3 of the Guidance. As needed, information to complete this form may need to be obtained from topographic or bathymetric surveys or from available online reference for Portland Harbor, such as USGS gauging stations.

This field form was developed from the *Guidance for River Bank Characterizations and Evaluations at the Portland Harbor Superfund Site* (USEPA, 2019) (Guidance). An assessment using this form must be completed for each geomorphic area or segment of the river bank with different physical and material characteristics because of the unique potential for erodibility each segment possesses. For further detail regarding Physical Shoreline Inspection requirements, please refer to Section 2.3 of the Guidance. As needed, information to complete this form may need to be obtained from topographic or bathymetric surveys or from available online reference for Portland Harbor, such as USGS gauging stations.

Physical Shoreline Inspection Form
SIB Project Area, Portland Harbor Superfund Site

This field form was developed from the *Guidance for River Bank Characterizations and Evaluations at the Portland Harbor Superfund Site* (USEPA, 2019) (Guidance). An assessment using this form must be completed for each geomorphic area or segment of the river bank with different physical and material characteristics because of the unique potential for erodibility each segment possesses. For further detail regarding Physical Shoreline Inspection requirements, please refer to Section 2.3 of the Guidance. As needed, information to complete this form may need to be obtained from topographic or bathymetric surveys or from available online reference for Portland Harbor, such as USGS gauging stations.

This field form was developed from the *Guidance for River Bank Characterizations and Evaluations at the Portland Harbor Superfund Site* (USEPA, 2019) (Guidance). An assessment using this form must be completed for each geomorphic area or segment of the river bank with different physical and material characteristics because of the unique potential for erodibility each segment possesses. For further detail regarding Physical Shoreline Inspection requirements, please refer to Section 2.3 of the Guidance. As needed, information to complete this form may need to be obtained from topographic or bathymetric surveys or from available online reference for Portland Harbor, such as USGS gauging stations.

Additional Notes / Observations:

Soil matrix similar to previous transect under the wharf. Cobbles are present on the slope, but only protect 50 percent of the slope. Timber piles support a timber deck above the bank. Cut-off timber piles are at the toe of the slope. Timber braces extend to OHW from the toe of the slope. Unable to access shoreline. Assessed shoreline from 20 feet away.

This field form was developed from the *Guidance for River Bank Characterizations and Evaluations at the Portland Harbor Superfund Site* (USEPA, 2019) (Guidance). An assessment using this form must be completed for each geomorphic area or segment of the river bank with different physical and material characteristics because of the unique potential for erodibility each segment possesses. For further detail regarding Physical Shoreline Inspection requirements, please refer to Section 2.3 of the Guidance. As needed, information to complete this form may need to be obtained from topographic or bathymetric surveys or from available online reference for Portland Harbor, such as USGS gauging stations.

This field form was developed from the *Guidance for River Bank Characterizations and Evaluations at the Portland Harbor Superfund Site* (USEPA, 2019) (Guidance). An assessment using this form must be completed for each geomorphic area or segment of the river bank with different physical and material characteristics because of the unique potential for erodibility each segment possesses. For further detail regarding Physical Shoreline Inspection requirements, please refer to Section 2.3 of the Guidance. As needed, information to complete this form may need to be obtained from topographic or bathymetric surveys or from available online reference for Portland Harbor, such as USGS gauging stations.

This field form was developed from the *Guidance for River Bank Characterizations and Evaluations at the Portland Harbor Superfund Site* (USEPA, 2019) (Guidance). An assessment using this form must be completed for each geomorphic area or segment of the river bank with different physical and material characteristics because of the unique potential for erodibility each segment possesses. For further detail regarding Physical Shoreline Inspection requirements, please refer to Section 2.3 of the Guidance. As needed, information to complete this form may need to be obtained from topographic or bathymetric surveys or from available online reference for Portland Harbor, such as USGS gauging stations.

This field form was developed from the *Guidance for River Bank Characterizations and Evaluations at the Portland Harbor Superfund Site* (USEPA, 2019) (Guidance). An assessment using this form must be completed for each geomorphic area or segment of the river bank with different physical and material characteristics because of the unique potential for erodibility each segment possesses. For further detail regarding Physical Shoreline Inspection requirements, please refer to Section 2.3 of the Guidance. As needed, information to complete this form may need to be obtained from topographic or bathymetric surveys or from available online reference for Portland Harbor, such as USGS gauging stations.

This field form was developed from the *Guidance for River Bank Characterizations and Evaluations at the Portland Harbor Superfund Site* (USEPA, 2019) (Guidance). An assessment using this form must be completed for each geomorphic area or segment of the river bank with different physical and material characteristics because of the unique potential for erodibility each segment possesses. For further detail regarding Physical Shoreline Inspection requirements, please refer to Section 2.3 of the Guidance. As needed, information to complete this form may need to be obtained from topographic or bathymetric surveys or from available online reference for Portland Harbor, such as USGS gauging stations.

This field form was developed from the *Guidance for River Bank Characterizations and Evaluations at the Portland Harbor Superfund Site* (USEPA, 2019) (Guidance). An assessment using this form must be completed for each geomorphic area or segment of the river bank with different physical and material characteristics because of the unique potential for erodibility each segment possesses. For further detail regarding Physical Shoreline Inspection requirements, please refer to Section 2.3 of the Guidance. As needed, information to complete this form may need to be obtained from topographic or bathymetric surveys or from available online reference for Portland Harbor, such as USGS gauging stations.

This field form was developed from the *Guidance for River Bank Characterizations and Evaluations at the Portland Harbor Superfund Site* (USEPA, 2019) (Guidance). An assessment using this form must be completed for each geomorphic area or segment of the river bank with different physical and material characteristics because of the unique potential for erodibility each segment possesses. For further detail regarding Physical Shoreline Inspection requirements, please refer to Section 2.3 of the Guidance. As needed, information to complete this form may need to be obtained from topographic or bathymetric surveys or from available online reference for Portland Harbor, such as USGS gauging stations.

This field form was developed from the *Guidance for River Bank Characterizations and Evaluations at the Portland Harbor Superfund Site* (USEPA, 2019) (Guidance). An assessment using this form must be completed for each geomorphic area or segment of the river bank with different physical and material characteristics because of the unique potential for erodibility each segment possesses. For further detail regarding Physical Shoreline Inspection requirements, please refer to Section 2.3 of the Guidance. As needed, information to complete this form may need to be obtained from topographic or bathymetric surveys or from available online reference for Portland Harbor, such as USGS gauging stations.

An assessment using this form must be completed for each geomorphic area or segment of the river bank with different physical and material characteristics because of the unique potential for erodibility each segment possesses. For further detail regarding Physical Shoreline Inspection requirements, please refer to Section 2.3 of the Guidance. As needed, information to complete this form may need to be obtained from topographic or bathymetric surveys or from available online reference for Portland Harbor, such as USGS gauging stations.

Type of Surface Protection (woody debris, rooted vegetation, embedded boulders, revetment, bedrock, etc.):	% of Bank Covered by Surface Protection	Location of protection relative to the toe of the slop, top of the bank, and OHW elevation	Additional Notes / Observations
Woody Debris	5 %	From 2 feet to 4 feet above OHW	
Rooted Vegetation	65 %	From 3 feet above OHW to top of bank	

Physical Shoreline Inspection Form
SIB Project Area, Portland Harbor Superfund Site

Type and Size of Armoring (riprap, rock, gravel, concrete, gabions, retaining walls, etc.):	% of Bank Covered by Armoring	Condition of armoring (stable, unstable, sloughing into river, etc.)	Location of armoring relative to the toe of the slop, top of the bank, and OHW elevation	Additional Notes / Observations
Riprap - 18" Max.	20 %	Stable	From 8 feet above OHW to toe of slope	
Rock; Quarry spalls. 8" Max.	20 %	Stable	From 8 feet above OHW to toe of slope	

River Bank Vegetation Type:	% of Bank Covered by Vegetation	Root Depth (depth relative to bank height in %):	Root Density (% of bank surface covered by roots):	Additional Notes / Observations
Blackberries	60 %	65 %	65 %	From 4 feet above OHW to top of bank
Trees	5 %	15 %	15 %	Trees within 3 feet of top of bank

River Bank Soil Types classified using the Unified Soil Classification System determined by ASTM D2488:						
Bedrock	Cobble	Sand	Boulder	Gravel	Silt or Clay	Location
0%	0%	85%	0%	5%	10%	Latitude 45.5713695,Longitude -122.7223403

Bank Stratification:	☑ No Layers ☐ Single Layer of Erodible Material ☐ Multiple Layers of Erodible Material
Visible indicators of active river bank erosion due to overland flow, wave and/or vessel wake, or other factors? Describe and document via photograph and GPS coordinates when possible.	None
Evidence of previous river bank SCMs. Describe current integrity in providing protection against erosion.	None

Presence of Aquatic Vegetation?	☐ Yes ☑ No

GPS Points collected within tenth of RM:		
Location ID	Description of Point:	Photos

Additional Notes / Observations:
Soil matrix near OHW. USCG MSU pier adjacent to transect. Vegetation and rock overlap from 4 to 8 feet above OHW

FIELD CHANGE REQUEST FORM
SWAN ISLAND BASIN PROJECT AREA
PORTLAND HARBOR SUPERFUND SITE

PROJECT NUMBER: DT2002	**DATE:** July 21, 2022	**VARIANCE NUMBER:** 08

FIELD TASK: Sediment Sampling

CONTRACT NUMBER: CERCLA Docket No. 10-2021-001

REQUESTED BY: Jeff Hodge, HGL PM; Shane Cherry, HGL Technical Lead

PRESENT REQUIREMENTS: The Pre-Design Investigation (PDI) Work Plan states that equipment rinsate blanks will be collected at a rate of 1 per 20 samples, with a minimum of one per week per equipment type. Additionally, the plan states that if equipment is dedicated to a sample or disposable equipment is used, no equipment blanks are required. The equipment rinsate blanks are discussed in Field Sampling Plan (FSP) Section 8, Unified Federal Policy-Quality Assurance Project Plan (UFP-QAPP) Section 12, and standard operating procedure (SOP) 300.4 of the PDI WP.

PROPOSED CHANGE: The proposed change is to collect one equipment rinsate blank per week.

TECHNICAL JUSTIFICATION: The only sampling equipment that is decontaminated after use on site are the stainless-steel spoons. The stainless-steel spoons are used to transfer the sediment from the core to a disposable pan, composite the material from the sampled interval and fill the sample jars. The stainless-steel spoons do not have complex parts with crevices that require intensive decontamination or assessment of the decontamination procedures through twice-daily equipment blanks. The elimination of these samples that provide limited value will reduce the shipping requirements for the project and thus reduce the projects carbon footprint. Each equipment rinsate sample results in eight liters of water. The sample containers for one equipment rinsate sample mostly fill a cooler that is approximately 75 pounds when shipped.

COST/SCHEDULE IMPACT: There will be no impact to the schedule. A small labor, shipping, and sample analysis cost savings will be realized with the proposed adjustment.

PROJECT NUMBER: DT2002	**DATE:** September 23, 2022	**VARIANCE NUMBER:** 09

FIELD TASK: Sediment Sampling

CONTRACT NUMBER: CERCLA Docket No. 10-2021-001

REQUESTED BY: Jeff Hodge, HGL PM; Shane Cherry, HGL Technical Lead

PRESENT REQUIREMENTS: The Pre-Design Investigation Work Plan (PDI WP) states that stainless steel bowls will be used for compositing samples. The bowls are discussed in Section 4 of the Field Sampling Plan (FSP) and Section 2 of the Waste Management Plan and standard operating procedures (SOPs) 403.03, 403.06, 403.08, 411.02, A-4, and A-5.

PROPOSED CHANGE: Include disposable aluminum bowls in the list of acceptable materials for the bowls used to composite the samples.

TECHNICAL JUSTIFICATION: Disposable aluminum bowls were used instead of the stainless-steel bowls listed in the PDI WP for two reasons: (1) Disposable aluminum bowls are routinely used during environmental investigations for mixing or compositing samples to reduce the risk of cross contamination associated with decontamination and (2) Aluminum sediment sampling core sleeves are specified in the PDI WP as acceptable. Additionally, the sediment samples are not analyzed for aluminum since it is not a contaminant of concern. The aluminum bowls are greater than 99 percent aluminum.

HGL collected equipment blank (EB) samples to demonstrate that sampling equipment didn't contribute significant contamination. The sample train included a sediment catcher, core sleeve, mixing utensils, and aluminum bowl (See Photograph 1). The results from two EB samples (EB01-07/12/2022 and EB02-07/13/2022) are provided in Table 1. The laboratory method blank (LMB) results that are associated with the EB samples are also provided in Table 1 for reference. The EB and LMB samples were analyzed for the same constituents as the sediment samples and were also analyzed for additional constituents that are included in Table 17 of the Record of Decision (ROD) for the surface water media. Although there were trace level detections in both EBs of various constituents, the extremely low reporting limits and laboratory processes likely contributed to many of the reported detections. The laboratory processes contributing low levels of the contaminants is evident by the 15 different constituent detections reported for the LMB. A total of 22 constituents were reported for the EB samples. Only 1 of the 22 reported detections exceeded a cleanup level (CUL). Hexachlorobenzene was reported at 0.0435 nanograms per liter (ng/l) and 0.0459 ng/l in the EB samples. Both of these reported detections were below the practical quantitation limit (PQL) and flagged as estimated by the laboratory. The CUL is 0.029 ng/l. Per Table 17 of the ROD, hexachlorobenzene is not a contaminant that will be evaluated in sediment samples. Thus, there will be no added data validation flags due to the hexachlorobenzene detections. Some additional data flags may be required for the limited number of detections in the EB samples that were not in the LMB samples, but these flags are not anticipated to impact project decisions. None of the reported detections would invalidate the sediment sample data.

COST/SCHEDULE IMPACT: There will be no impact to the schedule or costs associated with the proposed adjustments.

Notes:
Concentration exceeds CUL
Concentration exceeds CUL and RAL/PQL
Concentration exceeds CUL, RAL/PQL, PTW threshold
µg/kg - micrograms per kilogram
mg/kg - milligrams per kilogram
pg/g - picogram per gram

A - summed value based on limited number of analytes
BaPEq - benzo(a)pyrene equivalent
cPAH - carcinogenic polycyclic aromatic hydrocarbon
CUL - cleanup level
DDD - dichlorodiphenyldichloroethane
DDE - dichlorodiphenyldichloroethylene
DDT - dichlorodiphenyltrichloroethane
DDx - DDD + DDE + DDT
EPA - U.S. Environmental Protection Agency
J - estimated concentration
NA - not analyzed
NE - none established
PAH - polycyclic aromatic hydrocarbon
PCB - polychlorinated biphenyl
PQL - practical quantitation limit
PTW - principal threat waste
R - rejected
RAL - remedial action level
TEQ - toxic equivalent
U - analyte not detected above laboratory reporting limit
